 The Provision of Cross-border Health Services for Wales Great Britain: Parliament: House of Commons: Welsh Affairs Committee,2009 Given the divergence in health policy between England and Wales, and the significant number of patients who cross the border for treatment, the Welsh Affairs Committee examined the interface between the two systems and the effectiveness of co-ordination between the Department for Health and the Welsh Assembly Government. It wanted to discover whether cross-border patients are treated fairly and whether the Welsh Assembly Government and the Department of Health consider the border in the development of the diverging policy environment. The Committee was aware of significant confusion amongst patients, for example in knowing what they are entitled to receive from their health service and that cross-border providers were being disadvantaged by the need to cope with two separate funding and commissioning schemes. The Committee's interim report on this topic (HC 870, session 2007-08, ISBN 9780215521682) concluded that four key criteria should be established in cross-border health policy: clinical excellence as close to home as possible; border-proofing of policy and practice; cross-border citizen engagement; and transparent and accountable co-operation between localities, regions and governments. This report returns to these key criteria. The Committee is very disappointed that a protocol on cross-border health services has not been agreed, further evidence of a clear lack of co-ordination between the UK and Welsh Assembly governments and which leaves clinicians and administrators in a strained position and risks adversely affecting patients as a result of cross-border commissioning and funding problems. Better information for patients must be provided. The Committee finds the Department of Health's delay in responding to its interim report until some 6 months after publication to be unacceptable.

 Machine Learning Support for Fault Diagnosis of System-on-Chip Patrick Girard,Shawn Blanton,Li-C. Wang,2023-03-13 This book provides a state-of-the-art guide to Machine Learning (ML)-based techniques that have been shown to be highly efficient for diagnosis of failures in electronic circuits and systems. The methods discussed can be used for volume diagnosis after manufacturing or for diagnosis of customer returns. Readers will be enabled to deal with huge amount of insightful

test data that cannot be exploited otherwise in an efficient, timely manner. After some background on fault diagnosis and machine learning, the authors explain and apply optimized techniques from the ML domain to solve the fault diagnosis problem in the realm of electronic system design and manufacturing. These techniques can be used for failure isolation in logic or analog circuits, board-level fault diagnosis, or even wafer-level failure cluster identification. Evaluation metrics as well as industrial case studies are used to emphasize the usefulness and benefits of using ML-based diagnosis techniques.

Do,2015-10-27 The use of pharmacotherapeutics in the management of retinal diseases is rapidly evolving, and a favorable therapy for the patient. Today anti-VEGF agents are used for a range of indications from inflammation-related choroidal neovascularization to macular edema secondary to retinal vein occlusion or diabetic retinopathy. Beyond VEGF, there is an array of target areas under investigation – not only for vascular pathologies such as age-related macular degeneration and diabetic eye disease, but also for degenerative, infectious and inflammatory retinal conditions. This publication discusses many aspects from basic research on the retina, to animal models for retinal drug delivery, retinal diseases that are amenable to pharmacotherapy and also drugs and mechanisms in retinal diseases. Anyone concerned with the management of retinal diseases – the general ophthalmologist and the retina specialist alike – will find this book indispensable reading.
