AACR Cancer Progress Report 2023 American Association for Cancer Research,2023-09-13 Unprecedented progress in medical research is increasing our understanding of the collection of diseases we call cancer and is driving improvements in cancer prevention, early detection, diagnosis, and treatment. These advances are made possible by investments in NIH, NCI, FDA, and CDC by the U.S. federal government. As the first and largest professional organization in the world dedicated to preventing and curing all cancers, AACR continues to be a catalyst for scientific breakthroughs that save the lives of patients with cancer. AACR is committed to increasing public understanding of cancer and advocating for increased funding for medical research. The annual AACR Cancer Progress Report to Congress and the American public is a cornerstone of AACR's educational efforts. This thirteenth edition of the report highlights how research continues to extend and improve the lives of Americans, including the lives of the eight courageous individuals featured in the report and their family members who have shared their experiences with cancer. It also underscores how unwavering, bipartisan support from Congress, in the form of robust and sustained annual increases in funding for NIH, NCI, FDA, and CDC, is urgently needed. The remarkable progress being made against cancer is resulting in a steady reduction in cancer death rates, and a consistent rise in the number of people who live longer and fuller lives after a cancer diagnosis. In fact, the overall U.S. cancer death rate has fallen by 33 percent between 1991 and 2020, a reduction that translates into averting an estimated 3.8 million deaths from cancer. The reduction in overall cancer mortality is driven largely by the decline in the U.S. lung cancer death rate, the pace of which has accelerated in recent years because of reduction in smoking and advances in early detection and treatment. Additionally, the reduction in death rates for melanoma, colorectal cancer, prostate cancer, and female breast cancer has contributed to the progress against overall U.S. cancer mortality. Notably, among U.S. children and adolescents, overall cancer death rates have declined by 70 percent and 64 percent, respectively, over the past five decades.

AACR Cancer Progress Report 2022 American Association for Cancer Research,2022-09-21 Transformative research and technological innovations are driving unprecedented progress against the collection of diseases we call cancer. As the first and largest professional organization in the world dedicated to advancing all areas of cancer research and patient care, AACR has been and continues to be a catalyst for scientific breakthroughs that save and enhance the lives of cancer patients. It is also committed to increasing public understanding of cancer and advocating for increased federal funding for cancer research and related sciences. The annual AACR Cancer Progress Report to Congress and the American public is a cornerstone of AACR's educational efforts. This twelfth edition of the report highlights how research continues to extend and improve lives, including the lives of the five courageous individuals featured in the report and their family members who have shared their experiences with cancer. It also underscores how unwavering, bipartisan support from Congress, in the form of robust and sustained annual increases in funding for NIH, NCI, CDC, and FDA, is urgently needed if we are to realize our vision of eradicating cancer for all populations. The remarkable progress being made against cancer—in particular, improvements in reducing smoking rates and developments in early detection and treatment—is resulting in a steady fall in cancer death rates, and a consistent rise in the number of people who live longer after a cancer diagnosis. In fact, in the United States, the age-adjusted overall cancer death rate has been declining since the 1990s, with the reductions between 1991 and 2019 translating into nearly 3.5 million cancer deaths avoided. Additionally, the number of cancer survivors living in the United States has exceeded 18 million as of January 1, 2022. Unfortunately, certain U.S. populations, including racial and ethnic minorities and several other medically underserved groups, have not benefited equally from the advances against cancer. Complex factors referred to as social determinants of health have contributed to cancer health disparities in the United States. It is imperative that all stakeholders work together to eradicate the systemic and structural injustices that are current barriers.

Physical Activity and Cancer Kerry S. Courneya,Christine M. Friedenreich,2010-11-26 This book explores in depth the relation between physical activity and cancer control, including primary prevention, coping with treatments, recovery after treatments, long-term survivorship, secondary prevention, and survival. The first part of the book presents the most recent research on the impact of physical activity in preventing a range of cancers. In the second part, the association between physical activity and cancer survivorship is addressed. The effects of physical activity on supportive care endpoints (e.g., quality of life, fatigue, physical functioning) and disease endpoints (e.g., biomarkers, recurrence, survival) are carefully analyzed. In addition, the determinants of physical activity in cancer survivors are discussed, and behavior change strategies for increasing physical activity in cancer survivors are appraised. The final part of the book is devoted to special topics, including the relation of physical activity to pediatric cancer survivorship and to palliative cancer care.

The Immortal Life of Henrietta Lacks Rebecca Skloot,2010-02-02 #1 NEW YORK TIMES BESTSELLER • “The story of modern medicine and bioethics—and, indeed, race relations—is refracted beautifully, and movingly.”—Entertainment Weekly NOW A MAJOR MOTION PICTURE FROM HBO® STARRING OPRAH WINFREY AND ROSE BYRNE • ONE OF THE “MOST INFLUENTIAL” (CNN), “DEFINING” (LITHUB), AND “BEST” (THE PHILADELPHIA INQUIRER) BOOKS OF THE DECADE • ONE OF ESSENCE’S 50 MOST IMPACTFUL BLACK BOOKS OF THE PAST 50 YEARS • WINNER OF THE CHICAGO TRIBUNE HEARTLAND PRIZE FOR NONFICTION NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • Entertainment Weekly • O: The Oprah Magazine • NPR • Financial Times • New York • Independent (U.K.) • Times (U.K.) • Publishers Weekly • Library Journal • Kirkus Reviews • Booklist • Globe and Mail Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As

Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Mental Health | Atmospheres | Video Games Jimena Aguilar Rodríguez, Federico Alvarez Igarzábal, Michael S. Debus, Curtis L. Maughan, Su-Jin Song, Miruna Vozaru, Felix Zimmermann, 2022-10-31 Gaming has never been disconnected from reality. When we engage with ever more lavish virtual worlds, something happens to us. The game imposes itself on us and influences how we feel about it, the world, and ourselves. How do games accomplish this and to what end? The contributors explore the video game as an atmospheric medium of hitherto unimagined potential. Is the medium too powerful, too influential? A danger to our mental health or an ally through even the darkest of times? This volume compiles papers from the Young Academics Workshop at the Clash of Realities conferences of 2019 and 2020 to provide answers to these questions.

Cancer Treatment: An Interdisciplinary Approach Nima Rezaei, 2024-01-01 Cancer treatment is a challenging issue, while the treatment modalities have extended from traditional surgery, chemotherapy, and radiation therapy to new therapeutic approaches, including targeted therapy, immunotherapy, stem cell transplantation, and hormone therapy. Therefore, an interdisciplinary approach is needed to find a better therapeutic protocols in order to increase the prognosis and quality of life of patients with cancer. The second volume of the “Interdisciplinary Cancer Research” series, entitled “Cancer Treatment: An Interdisciplinary Approach” publishes comprehensive volumes on different cancer treatment modalities and presents the most updated and peer-reviewed articles on cancer therapy. This interdisciplinary series is of special value to researchers and practitioners working on cell biology, immunology, hematology, biochemistry, genetics, oncology and related fields. This is the main concept of Cancer Immunology Project (CIP), which is a part of Universal Scientific Education and Research Network (USERN). This interdisciplinary book will be of special value for researchers and clinicians who wish to extend their knowledge on cancer treatment.
