**Warfare and the Age of Printing (4 vols.)** Louis Sloos, 2008-01-31 An important part of the Dutch national treasure of early printed books from before 1801 on military and related subjects is kept in military libraries and collections. This catalogue contains 10,000 books in twelve different languages dated 1500–1800 from nine different Defence institutions/collections, representing both Army and Navy. By far the largest collections are the property of the Royal Netherlands Army Museum in Delft and the Royal Netherlands Military Academy in Breda. A great if not substantial part of these books is especially of international significance because of the contents, the intrinsic value or as historical objects. It took eight years to trace and describe these books, all of which have been given extensive analytical bibliographic descriptions. The book is a project of the Royal Netherlands Army Museum, Delft

**Spectroscopy and Computation of Hydrogen-Bonded Systems** Marek J. Wójcik, Yukihiro Ozaki, 2023-03-27 Comprehensive spectroscopic view of the state-of-the-art in theoretical and experimental hydrogen bonding research Spectroscopy and Computation of Hydrogen-Bonded Systems includes diverse research efforts spanning the frontiers of hydrogen bonding as revealed through state-of-the-art spectroscopic and computational methods, covering a broad range of experimental and theoretical methodologies used to investigate and understand hydrogen bonding. The work explores the key quantitative relationships between fundamental vibrational frequencies and hydrogen-bond length/strength and provides an extensive reference for the advancement of scientific knowledge on hydrogen-bonded systems. Theoretical models of vibrational landscapes in hydrogen-bonded systems, as well as kindred studies designed to interpret intricate spectral features in gaseous complexes, liquids, crystals, ices, polymers, and nanocomposites, serve to elucidate the provenance of spectroscopic findings. Results of experimental and theoretical studies on multidimensional proton transfer are also presented. Edited by two highly qualified researchers in the field, sample topics covered in Spectroscopy and Computation of Hydrogen-Bonded Systems include: Quantum-

mechanical treatments of tunneling-mediated pathways in enzyme catalysis and molecular-dynamics simulations of structure and dynamics in hydrogen-bonded systems Mechanisms of multiple proton-transfer pathways in hydrogen-bonded clusters and modern spectroscopic tools with synergistic quantum-chemical analyses Mechanistic investigations of deuterium kinetic isotope effects, ab initio path integral methods, and molecular-dynamics simulations Key relationships that exist between fundamental vibrational frequencies and hydrogen-bond length/strength Analogous spectroscopic and semi-empirical computational techniques examining larger hydrogen-bonded systems Reflecting the polymorphic nature of hydrogen bonding and bringing together the latest experimental and computational work in the field, Spectroscopy and Computation of Hydrogen-Bonded Systems is an essential resource for chemists and other scientists involved in projects or research that intersects with the topics covered within.

**An Asian International Real Estate Review** Kim Hin David Ho, 2021-10-20 Direct real estate market analysis is a rigorous investigative approach for academic research, and for direct real estate investment research in practice. 'An Asian International Real Estate Review' considers the subject in the context of economic theory pertaining to market disequilibria, utilizing data from major cities in Asia as case studies. Such an approach makes it possible to determine what really defines an Asian direct real estate sector. What is being measured? How does it behave (in terms of price and non-price factors)? How is it structured? How effectively does it achieve sustainable total returns? And how does it manage direct real estate market uncertainty? Direct real estate market uncertainty originates from both the demand-side and the supply-side of the market. The market responds to structural macroeconomic and microeconomic factors that in turn are affected by related public policies. Such factors and policies interact to affect Asian direct real estate in unique ways since the Asian currency crisis of 1997. 'An Asian International Real Estate Review' shows that while the details of direct real estate market analysis are different for the various Asian cities (and their direct real estate sectors) owing to their different stages of maturity, underlying principles nevertheless apply. 'An Asian International Real Estate Review' also looks at managing direct real estate market uncertainty at the portfolio level via the analytical techniques of direct real estate asset allocation, direct real estate value-at-risk (VaR), real option analysis and pricing.
