Obstetric Analgesia and Anesthesia John J. Bonica, 2012-12-06 The provision of the best possible anesthetic care to the-greatest number of patients all over the world has always been the main goal of the World Federation of Societies of Anaesthesiologists. In addition to the establishment of Regional Anesthesiology Training Centers and the organization of Regional and World Congresses, the distribution of practical monographs on some important aspects of anesthesiology were considered important for the attainment of this objective. In 1968, on the occasion of the Fourth World Congress of Anesthesiology, held in London, a monograph on Emergency Resuscitation, compiled by the Committee on Cardiopulmonary Resuscitation, chaired by Professor HENNING POULSEN, was made available to our membership. Subsequent ly, this excellent monograph was translated into Spanish, Russian, Ger man and French and to this date over 100,000 copies of it have been distributed to anesthesiologists and other interested physicians the world over. When looking for a suitable topic

for a second monograph to commemorate the 1972 World Congress of Anesthesiology to be held in Kyoto this September, the subject of Obstetric Analgesia and Anesthesia was the first choice of almost everyone consulted. For reasons that are hard to condone, obstetric analgesia and anesthesia has often been the step child among the anesthetic subspecialties.

Regional Anaesthesia Analgesia and Pain

Management M. Tiengo,V.A. Paladini,N.

Rawal,2012-12-06 Local-regional anesthesia and pain therapy represent two areas of common interest for all physicians. A thorough preparation in functional anatomy and general pharmacology, including familiarity with local anesthetics and analgesics, is considered fundamental background for further study or clinical application of such techniques. Knowledge of the mechanisms of action, efficacies and side effects of the relevant drugs is essential, as is appreciation of possible drug interactions to evaluate eventual toxic effects. Local-regional anesthesia and pain management are being increasing used in diverse medical specialties, including those requiring manual dexterity. In contemporary medicine correct evaluation of the medical outcome becomes essential, especially in relation to the cost-benefit balance, not only in terms of the resources consumed, also and more importantly for the quality of life of the patient.

Anesthesiology and Pain Management T.H. Stanley, M.A. Ashburn, P.G. Fine, 2012-12-06 Theodore H. Stanley, M.D. *Anesthesiology and Pain Management* contains the Refresher Course manuscripts of the presentations of the 36th Annual Postgraduate Course in Anesthesiology which took place at The Cliff Conference Center in Snowbird, Utah, February 22-26, 1991. The chapters

reflect new data and concepts within the general framework of pain research and basic science, clinical topics in pain management. The purposes of the textbook are to 1) act as a reference for the anesthesiologists attending the meeting, and 2) serve as a vehicle to bring many of the latest concepts in anesthesiology to others within a short time of the formal presentation. Each chapter is a brief but sharply focused glimpse of the interests in anesthesia expressed at the conference. This book and its chapters should not be considered complete treatises on the subjects addressed but rather attempts to summarize the most salient points. This textbook is the ninth in a continuing series documenting the proceedings of the Postgraduate Course in Salt Lake City. We hope that this and the past and future volumes reflect the rapid and continuing evolution of anesthesiology in the late twentieth century. ix
