Traditional Institutions in Contemporary African Governance Kidane Mengisteab, Gerard Hagg, 2017-06-26 Most African economies range from moderately advanced capitalist systems with modern banks and stock markets to peasant and pastoral subsistent systems. Most African countries are also characterized by parallel institutions of governance – one is the state sanctioned (formal) system and the other is the traditional system, which is adhered to, primarily but not exclusively, by the segments of the population in the subsistence peasant and pastoral economic systems. Traditional Institutions in Contemporary African Governance examines critical issues that are largely neglected in the literature, including why traditional institutions have remained entrenched, what the socioeconomic implications of fragmented institutional systems are, and whether they facilitate or impede democratization. The contributors investigate the organizational structure of traditional leadership, the level of adherence of the traditional systems, how dispute resolution, decision-making, and resource allocation are conducted in the traditional system, gender relations in the traditional system, and how the traditional institutions interact with the formal institutions. Filling a conspicuous gap in the literature on African governance, this book will be of great interest to policy makers as well as students and scholars of African politics, political economy and democratization.

India's National Security Satish Kumar, 2016-03-23 The twelfth volume in the series India's National Security: Annual Review offers a detailed analysis of India's complex security environment: persistence of major threats, alongside a constructive engagement with major powers based on its economic growth, military power and political stability. Topping the list of India's external security concerns is China's veiled hostility, manifest in its strategic nexus with Pakistan, incursions into India's borders and enhanced military deployment in India's immediate neighbourhood. Added to these are the intractable boundary dispute and uncertain implications of the recent leadership change in China. India, nevertheless, is attempting to cope with China's pressures by engaging with it at a diplomatic level and improving its own defence capability. Pakistan remains another major threat, because of its refusal to take action against militants responsible for the 2008 Mumbai terror attacks, its efforts at expanding its nuclear arsenal, and the increasing sway of right-wing elements on its society, politics and security forces. India further faces the challenges of facilitating Nepal's difficult transition to democracy, safeguarding its strategic interests in Afghanistan, stabilising Maldives' fledgling democracy, and tackling ethnic insurgencies along its borders with Myanmar. On the other hand, there are positives like India's strategic partnerships with Russia, US, France, Britain, Germany, and Japan, as well as a flowering relationship with Bangladesh. India's internal security situation is less alarming, with progress in talks with some North-Eastern insurgent outfits; a sharp fall in casualties due to left-wing extremism (LWE); and a gradual reduction in terrorist-related incidents in Kashmir. But sporadic cross-border infiltrations in Kashmir and spread of LWE to urban areas still pose challenges. Addressing such and other issues, this book will be indispensable for policymakers and governmental organisations; those in defence and strategic sectors; and students of defence studies, foreign policy, international relations, and political science.

An Ecumenical Odyssey Stanley Jayakumar Yesudass, No less than two decades were needed for the composition of the ecumenical convergence document The Church: Towards a Common Vision (TCTCV) which was published by the World Council of Churches in 2013. The document was intended to reflect a common vision of churches and ecumenical stakeholders on a myriad of ecclesiological themes. The book investigates whether the convergence document TCTCV delivers on its promises. The book focuses on the formation and the reception of TCTCV along with the two draft versions, The Nature and Purpose of the Church (1998) and The Nature and Mission of the Church (2005) and uncovers whether the responses by the churches to TCTCV hold an affirmation of the convergences registered in the document. Furthermore, it seeks to establish whether the responses point towards a common vision concerning various ecclesiological themes that are still contested by the churches today. The book also explores whether the responses to TCTCV reveal an advancement in the conversation surrounding several debated issues, and examines to what extent the churches are willing to creatively engage with the ecclesial other.

Confronting Animal Exploitation Kim Socha,Sarahjane Blum,2013-01-31 As animal exploitation increases, animal liberation issues are of growing concern, as seen through the rise of veganism, academic disciplines devoted to animal issues, and mainstream critiques of factory farms. Yet as the dialogues, debates and books continue to grow, the voices of street level activists--not academics, journalists or vegan chefs--are rarely heard. This volume broadens animal liberation dialogues by offering the arguments, challenges, inspiration and narratives of grassroots activists. The essays show what animal advocacy looks like from a collective of individuals living in and around Minnesota's Twin Cities; the essayists, however, write of issues, both personal and political, that resound on a global scale. This collection provides a platform for rank and file activists to explain why and how they dedicate their time and what is being done for animals on a local level that can translate to global efforts to end animal exploitation.

Asian Beekeeping in the 21st Century Panuwan Chantawannakul,Geoffrey Williams,Peter Neumann,2018-06-01 From the perspective of local scientists, this book provides insight into bees and bee management of Asia, with a special focus on honey bees. Asia is home to at least nine honey bee species, including the introduced European honey bee, *Apis mellifera*. Although *A. mellifera* and the native Asian honey bee, *Apis cerana*, are the most commonly employed species for commercial beekeeping, the remaining non-managed native honey bee species have important ecological and economic roles on the continent. Species distributions of most honey bee species overlap in Southeast Asia, thus promoting the potential for interspecies transmission of pests and parasites, as well as their spread to other parts of the world by human translocation. Losses of managed *A. mellifera* colonies is of great concern around the world, including in Asia. Such global colony losses are believed to be caused, in part, by pests and parasites originating from Asia such as the mite *Varroa destructor*, the microsporidian *Nosema ceranae*, and several bee viruses. Taking advantage of the experience of leading regional bee researchers, this book provides insight into the current situation of bees and bee management in Asia. Recent introductions of honey bee parasites of Asian origin to other parts of the world ensures that the contents of this book are broadly relevant to bee scientists, researchers, government officials, and the general public around the world.

Quantum Dot Solar Cells Jiang Wu,Zhiming M. Wang,2013-09-28 The third generation of solar cells includes those based on semiconductor quantum dots. This sophisticated technology applies nanotechnology and quantum mechanics theory to enhance the performance of ordinary solar cells. Although a practical application of quantum dot solar cells has yet to be achieved, a large number of theoretical calculations and experimental studies have confirmed the potential for meeting the requirement for ultra-high conversion efficiency. In this book, high-profile scientists have contributed tutorial chapters that outline the methods used in and the results of various quantum dot solar cell designs, including quantum dot intermediate band solar cells, hot electron quantum dot solar cells, quantum-dot sensitized solar cells, colloidal quantum dot solar cells, hybrid polymer-quantum dot solar cells, and MEG quantum dot solar cells. Both theoretical and experimental approaches are described. Quantum Dot Solar Cells helps to connect the fundamental laws of physics and the chemistry of materials with advances in device design and performance. The book can be recommended for a broad audience of chemists, electrical engineers, and materials scientists, and is suitable for use in courses on materials and device design for advanced and future optoelectronics.
