Yellow Animals Teddy Borth,2017-01-01 The color yellow is found in all parts of nature. Yellow is found in the sea on brain coral, in the air on American goldfinches, and on the land on bearded dragons. Yellow Animals will help readers understand that colors in nature are not just for beauty, but sometimes have more important purposes. Included in this title is a color wheel showing primary and secondary colors and their relationships. Aligned to Common Core Standards and correlated to state standards.

Color by Number Animals Walter Foster Creative Team, 2016-05-01 Challenge your coloring skills with Color-by-Number Animals, an exciting new way to color by number. Taking the traditional coloring book to the next level, these geometric color-by-number templates allow beginning artists to relax and unwind as they color, while encouraging more advanced color-by-number enthusiasts to complete the templates in a variety of mediums, including colored pencils, markers, and crayons. After a short introduction detailing a basic color-by-number guide with tips and examples of each medium, more than 30 unique, color-by-number templates are included for artists to color and create their own masterpieces. As the designs become more complex, fewer numbers are included for an additional challenge, encouraging artists to choose their own colors and patterns to complete the design. A full-color reference gallery is also included so that artists can compare their completed images to the original renderings or take a sneak peak at the finished artwork for guidance. With more than 30 color-by-number templates to color, beginning and intermediate artists of all ages will be mesmerized by this unique spin on the traditional color-by-number activity book.

How Animals See the World Olga F. Lazareva, Toru Shimizu, Edward A. Wasserman, 2012-04-19 The visual world of animals is highly diverse and often very different from that of humans. This book provides an extensive review of the latest behavioral and neurobiological research on animal vision, detailing fascinating species similarities and

differences in visual processing.

Engineering Animals Mark Denny, Alan McFadzean, 2011-05-16 The alarm calls of birds make them difficult for predators to locate, while the howl of wolves and the croak of bullfrogs are designed to carry across long distances. From an engineer's perspective, how do such specialized adaptations among living things really work? And how does physics constrain evolution, channeling it in particular directions? Writing with wit and a richly informed sense of wonder, Denny and McFadzean offer an expert look at animals as works of engineering, each exquisitely adapted to a specific manner of survival, whether that means spinning webs or flying across continents or hunting in the dark-or writing books. This particular book, containing more than a hundred illustrations, conveys clearly, for engineers and nonengineers alike, the physical principles underlying animal structure and behavior. Pigeons, for instance-when understood as marvels of engineering-are flying remote sensors: they have wideband acoustical receivers, hi-res optics, magnetic sensing, and celestial navigation. Albatrosses expend little energy while traveling across vast southern oceans, by exploiting a technique known to glider pilots as dynamic soaring. Among insects, one species of fly can locate the source of a sound precisely, even though the fly itself is much smaller than the wavelength of the sound it hears. And that big-brained, upright Great Ape? Evolution has equipped us to figure out an important fact about the natural world: that there is more to life than

engineering, but no life at all without it.

The Power of Colour-change in Animals Frederick William Gamble,1899

Comparative Color Vision Gerald

Jacobs,2013-06-11 Comparative Color Vision provides information about the means by which color vision has been studied in nonhuman animals and about the outcomes of these studies for a variety of representative species. Individuals who become interested in color vision in animals come from a variety of different educational backgrounds—from the traditional biological and behavioral sciences as well as from more applied

fields. Accordingly, this book includes sufficient tutorial information about color vision so that a relative newcomer would be able to make sense out of this area without having to search out still more background material. To provide this, basic information about the psychophysics of color vision and about the methods used to study color vision in animals is presented; along with coverage of the broad range of biological mechanisms responsible for color vision. Subsequent chapters present systematic reviews of studies of color vision in a wide selection of vertebrate species. The final chapter is devoted to a discussion of two fascinating issues raised by studies of animal color vision: the evolutionary origins and the functional utility of color vision.
