Animal Eyes Michael F. Land, Dan-Eric Nilsson, 2012-03-01 *Animal Eyes* provides a comparative account of all known types of eye in the animal kingdom, outlining their structure and function with an emphasis on the nature of the optical systems and the physical principles involved in image formation. A universal theme throughout the book is the evolution and taxonomic distribution of each type of eye, and the roles of different eye types in the behaviour and ecology of the animals that possess them. In comparing the specific capabilities of eyes, it considers the factors that lead to good resolution of detail and the ability to function under a wide range of light conditions. This new edition is fully updated throughout, incorporating more than a decade of new discoveries and research.

Whose Eyes are These? Peg Hall, 2003 Examines a variety of animal eyes, noting how they look different and function in different ways. Animals shown include a zebra, a tiger, a housefly, a crocodile, a ghost crab, a snake, and an eagle.

Animal Eyes Beth Fielding, 2011-02-01 Explores the world of animal eyes, explaining how eyes work, why different animals have different types of eyes, and what each animal specifically uses them for.

The ways that eyes sample the world in space and time are considered, and the evolutionary origins of eyes are discussed. This new edition incorporates discoveries made since the first edition published in 2001.
