The Imaginary of Animals Annabelle Dufourcq, 2021-07-30

This book explores the phenomenon of animal imagination and its profound power over the human imagination. It examines the structural and ethical role that the human imagination must play to provide an interface between humans' subjectivity and the real cognitive capacities of animals. The book offers a systematic study of the increasing importance of the metaphors, the virtual, and figures in contemporary animal studies. It explores human-animal and real-imaginary dichotomies, revealing them to be the source of oppressive cultural structures. Through an analysis of creative, playful and theatric enactments and mimicry of animal behaviors and communication, the book establishes that human imagination is based on animal imagination. This helps redefine our traditional knowledge about animals and presents new practices and ethical concerns in regard to the animals. The book strongly contends that allowing imagination to play a role in our relation to animals will lead to the development of a more empathetic approach towards them. Drawing on works in phenomenology, contemporary animal philosophy, as well as ethological evidence and biosemiotics, this book is the first to rethink the traditional philosophical concepts of imagination, images, the imaginary, and reality in the light of a zoocentric perspective. It will appeal to philosophers, scholars and students in the field of animal studies, as well as anyone interested in human and non-human imaginations.

Man and Animal in Severan Rome Steven D.

Smith, 2014-07-24 This book argues that Aelian's important work on animals, the *De natura animalium*, represents a sophisticated literary critique of Severan Rome. His fascination with animals reflects the cultural issues of his day: philosophy, religion, the

exoticism of Egypt and India, sex, gender, and imperial politics.

The Origins of Music Carl Stumpf, 2012-07-26 The Origins of Music was first published in German in 1911. In this text Carl Stumpf set out a path-breaking hypothesis on the earliest musical sounds in human culture. Alongside his research in such diverse fields as classical philosophy, acoustics, and mathematics, Stumpf became one of the most influential psychologists of the late 19th century. He was the founding father of Gestalt psychology, and collaborated with William James, Edmund Husserl, and Wolfgang Köhler. This book was the culmination of more than 25 years of empirical and theoretical research in the field of music. In the first part, Stumpf discusses the origin and forms of musical activities as well as various existing theories on the origin of music, including those of Darwin, Rousseau, Herder, and Spencer. In the second part of the book, he summarizes his works on the historical development of instruments and music, and studies a putatively global range of music from non-European cultures to demonstrate the psychological principles of tonal organization, as well as providing a range of cross-cultural musical transcriptions and analyses. This became a foundation document for comparative musicology, the elder sibling to modern Ethnomusicology, and the book provides access to the original recordings Stumpf used in this process. The Origins of Music is available for the first time in the English language as a result of a collaboration between the European Society for the Cognitive Sciences of Music (ESCOM) and Oxford University Press. It is a fascinating volume for all those with

an interest in the history of psychology and music. It appears here in tandem with Self-Portrait, Stumpf's autobiography of 1924, in which he outlines the rich life experiences behind his research career alongside his own explanation of his scientific and cultural legacy.

Many Creatures Laura Purdie Salas, 2010 Uses musical verses sung to the tune of Clementine to teach the six main categories into which animals can be grouped.

Encyclopedia of Animal Behavior, 2019-01-21 Encyclopedia of Animal Behavior, Second Edition, Four Volume Set the latest update since the 2010 release, builds upon the solid foundation established in the first edition. Updated sections include Host-parasite interactions, Vertebrate social behavior, and the introduction of 'overview essays' that boost the book's comprehensive detail. The structure for the work is modified to accommodate a better grouping of subjects. Some chapters have been reshuffled, with section headings combined or modified. Represents a one-stop resource for scientifically reliable information on animal behavior Provides comparative approaches, including the perspective of evolutionary biologists, physiologists, endocrinologists, neuroscientists and psychologists Includes multimedia features in the online version that offer accessible tools to readers looking to deepen their understanding

The Origins of Music Nils L. Wallin, Bjorn Merker, Steven Brown, 2001-07-27 The book can be viewed as representing the birth of evolutionary biomusicology. What biological and cognitive

forces have shaped humankind's musical behavior and the rich global repertoire of musical structures? What is music for, and why does every human culture have it? What are the universal features of music and musical behavior across cultures? In this groundbreaking book, musicologists, biologists, anthropologists, archaeologists, psychologists, neuroscientists, ethologists, and linguists come together for the first time to examine these and related issues. The book can be viewed as representing the birth of evolutionary biomusicology—the study of which will contribute greatly to our understanding of the evolutionary precursors of human music, the evolution of the hominid vocal tract, localization of brain function, the structure of acoustic-communication signals, symbolic gesture, emotional manipulation through sound, self-expression, creativity, the human affinity for the spiritual, and the human attachment to music itself. The Wind Band Music of Henry Cowell Jeremy S.

Brown, 2018-03-14 The Wind Band Music of Henry Cowell studies the compositions for wind band by twentieth-century composer Henry Cowell, a significant and prolific figure in American fine art music from 1914-1965. The composer is noteworthy and controversial because of his radical early works, his interest in non-Western musics, and his retrogressive mature style—along with notoriety for his imprisonment in San Quentin on a morals charge. Eleven chapters are organized both topically and chronologically. An introduction, conclusion, series of eight appendices, bibliography, and discography complete this comprehensive study, along with an audio playlist of

representative works, hosted on the CMS website.

It explores the variety of ways animals are represented in audio-visual media, including wildlife documentaries and children's animated series, and the consequences these representations have for those species. Brett Mills discusses key ideas and approaches essential for thinking about animals drawing on relevant debates in philosophy, politics, gender studies, humanism and posthumanism, and ethics. The chapters examine different animal representations, focusing on zoos, pets, wildlife and meat. They present case studies, including discussions of Peppa Pig, The Hunt and The Dog Whisperer. Song of the Wild: A First Book of Animals Nicola

Davies, 2017-10-03 Two renowned picture book creators team up for a captivating first look at animals around the world. Sometimes lyrical and sometimes humorous, the poems reveal fascinating facts about animals of every color, shape, size, and origin, from giant blue whales to bats as tiny as bumblebees. Full color.

Human Minds and Animal Stories Wojciech Małecki, Piotr Sorokowski, Bogusław Pawłowski, Marcin Cieński, 2019-02-07 The power of stories to raise our concern for animals has been postulated throughout history by countless scholars, activists, and writers, including such greats as Thomas Hardy and Leo Tolstoy. This is the first book to investigate that power and explain the psychological and cultural mechanisms behind it. It does so by presenting the results of an experimental project that involved thousands of participants, texts representing various genres and national literatures, and the cooperation of an internationally-acclaimed bestselling author. Combining psychological research with insights from animal studies, ecocriticism and other fields in the environmental humanities, the book not only provides evidence that animal stories can make us care for other species, but also shows that their effects are more complex and fascinating than we have ever thought. In this way, the book makes a groundbreaking contribution to the study of relations between literature and the nonhuman world as well as to the study of how literature changes our minds and society. As witnessed by novels like *Black Beauty* and *Uncle Tom's Cabin*, a good story can move public opinion on contentious social issues. In *Human Minds and Animal Stories* a team of specialists in psychology, biology, and literature tells how they discovered the power of narratives to shift our views about the treatment of other species. Beautifully written and based on dozens of experiments with thousands of subjects,

this book will appeal to animal advocates, researchers, and general readers looking for a compelling real-life detective story. - Hal Herzog, author of Some We Love, Some We Hate, Some We Eat : Why It's So Hard To Think Straight About Animals
