The Photo Ark Joel Sartore,2017 This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

Images Of Animals Eileen Crist,2010-06-02 A fascinating exploration of the language we use for animal behavior.

The World of Animals Joshua BishopRoby,2007-12-14 Animals come in all shapes and sizes! The lively images, compelling facts, and captivating sidebars work in conjunction with the supportive text and a glossary and index to give readers plenty of information on taxonomy. Readers will discover the various kingdoms and classes of the animal world including echinoderms, arthropods, chordates, amphibians, birds, and mammals. To aid in engaging readers in further scientific topics and themes, an alluring hands-on lab activity is included!

Picture Perception in Animals Joel Fagot,2013-06-17 Animal researchers commonly present pictures to their subjects, usually birds or monkeys, in order to infer how natural objects are perceived and conceptualised, or to discover the brain mechanisms underlying these abilities. This unique book questions the premise of this experimental approach and asks whether or not pictures can be considered as ecologically valid and realistic stimuli for animals. Leading researchers in comparative psychology and neuroscience address such questions as: Can animals recognise objects of scenes in pictures despite variations in viewpoints?; How do animals perceive faces? and Is there an equivalence, in animals' minds, between pictures and the objects they represent?. The result is an authoritative and cutting-edge survey of current knowledge in the field, which underlines the advantages, limits and risks of using pictures to infer cognitive abilities or brain mechanisms in animal studies. Picture Perception in Animals will be essential reading for comparative psychologists, anthropologists, and neuroscientists working in picture perception.
