Iter Vaticanum Franciscanum Etzkorn, 2021-12-06 The Vatican Library's Vaticanus Latinus collection is one of its largest holdings. The majority of the codices between the shelf numbers 3000 and 9000 remain as yet to be cataloged according to modern standards. Professor Girard Etzkorn has cataloged over one hundred of these manuscripts, selecting principally those pertaining to Franciscan authors and Franciscan history between the thirteenth and fifteenth centuries. He has successfully identified the authors of many treatises and sometimes entire works which were hitherto 'anonymous'. While the *Iter Vaticanum Franciscanum* focuses principally on manuscripts dealing with philosophy and theology, there are also codices which transmit texts on medieval astronomy, medicine, Canon Law, as well as numerous sermons, many of which have until now been unknown. The format of this catalog comprises three (sometimes four) categories: 1) the description, 2) a list of published editions, 3) annotations of historical, biographical or bibliographical importance noted in the codex and 4) a bibliography of 'post-medieval' books and articles about the codex and/or its contents.

Optics Made Clear William L. Wolfe, 2007 Have you wondered why the sky is blue? Why the sunset is red? How hummingbirds show us their many colors? Why the road ahead sometimes seems to have water on it, when it does not? Have you wondered how telescopes work to give a magnified image of distant objects? How do microscopes provide a magnified image of close objects? How do spectrosopes, eye glasses, cameras, binoculars, and similar instruments work? How do the simple rear view mirrors in cars dim and provide wide fields of view? In this book, William L. Wolfe attempts to describe many of the natural phenomena caused by light, and the optical devices that use it in terms everyone can understand.

Modeling Marine Systems A. M. Davies,2018-01-18 This two-volume reference presents a series of review and research articles on advances in computing, marine physics, and remote sensing and addresses their importance to shallow sea modeling. Intended as a tribute to Dr. Norman Heaps, topics in the book reflect the range and diversity of his work, as well as his influence on international marine science. Topics discussed include numerical techniques, flow in homogenous sea regions, stratified flows, lake regimes, validation of numerical models, remote sensing as a method to collect oceanographic data at the sea surface, and bottom boundary modeling. Marine scientists actively involved in mathematical modeling and scientists who are interested in using models as tools to gain more insight and understanding of the processes they are observing will find this text useful.

Snowboarding Bodies in Theory and Practice H.

Thorpe,2011-03-29 This book provides the first in-depth analysis of the global phenomenon of snowboarding culture. Adopting an interdisciplinary approach, it offers key insights into the sport, lifestyle, industry, media, gender relations, travel, and physical experience of snowboarding, in both historical and contemporary contexts.

Counterfeiting and Theft of Tangible Intellectual Property United States. Congress. Senate. Committee on the Judiciary,2005

Snowboarding Holly Thorpe, 2012-01-06 This book provides a comprehensive look at the snowboarding phenomenon, including its history; techniques and equipment; biographies of the sport's pioneers, athletes, and heroes; key sites and events; and future directions. While snowboarding didn't become a commercial success until the early 1980s, the roots of the modern snowboard go back to at least 1964, when Sherman Poppen invented the Snurfer by bolting two skis together and adding a rope for stability. Today snowboarding is one of the most prominent and appealing youth sports. Want proof? Professional snowboarder and two-time Olympic gold medalist Shaun White was the highest paid athlete entering the 2010 Winter Olympics with an estimated annual salary of \$10 million. The book is a highly accessible and extensive overview of snowboarding, providing an introduction to the sport and lifestyle of snowboarding; a historical timeline of the rapid growth of snowboarding; techniques and equipment used; and a discussion of key places and events, such as Alaska, Winter X Games, and the Winter Olympics.

Polymer Photodegradation J.F. Rabek, 2012-12-06 During the last two decades, the production of polymers and plastics has been increasing rapidly. In spite of developing new polymers and polymeric materials, only 40~60 are used commercially on a large scale. It has been estimated that half of the annual production of polymers is employed outdoors. The photochemical instability of most polymers limits their outdoor application as they are photodegraded quickly over periods from months to a few years. To the despair of technologists and consumers alike, photodegradation and environmental ageing of polymers occur much faster than can be expected from knowledge collected in laboratories. In order to improve polymer photostability there has been a very big effort during the last 30 years to understand the mechanisms involved in photodegradation and environmental

ageing. This book represents the author's attempt, based on his 25 years' experience in research on photodegradation and photo stabilization, to collect and generalize a number of available data on the photodegradation of polymers. The space limitation and the tremendous number of publications in the past two decades have made a detailed presentation of all important results and data difficult. The author apologizes to those whose work has not been quoted or widely presented in this book. Because many published results are very often contradictory, it has been difficult to present a fully critical review of collected knowledge, without antagonizing authors. For that reason, all available theories, mechanisms and different suggestions have been presented together, and only practice can evaluate which of them are valid.

Vision and Visual Perception Duco A. Schreuder, 2014-12-03
Vision is about insight, and visual perception is about cognition - and they form the foundation of how we see the world. Duco A. Schreuder, a physicist and psychologist, explores the finer details of each in this groundbreaking book that explores human consciousness and perception. Sharing virtually everything he's learned over a varied career spanning more than sixty years, he examines a wide array of topics, including how we understand what we visually process, how we store and retrieve information, the role that neurons play in how what we see, and much more. While Schreuder isn't afraid to disagree with other leading thinkers, he relies on science and focuses on the facts behind it so you can understand lighting, visual perception, engineering design, and applied and experimental physics. Looking is about insight, whereas seeing is about knowledge, and you need to know how each one works to truly understand how humanity views the world. Whether you're an illuminating engineer considering the fundamentals of the trade or a student or professional in an allied discipline, you'll be well served by taking a closer look at *Vision and Visual Perception*.

Light Pollution Handbook Kohei Narisada, Duco Schreuder, 2013-06-05 Constituting the first holistic overview including practical remedies, this handbook provides the background needed by anyone grappling with the complex issue of outdoor lighting and its effects. It describes not only the problems that astronomers and other night sky observers face in reducing the problems of information loss due to light pollution, as well as the problems lighting technologists face in optimising outdoor lighting installations that cause little or no light pollution. The first part is directed to decision makers and managers of outdoor space and covers the areas of general interest, culminating in recommendations to reduce the impact of light pollution. The second part is directed primarily to scientists and engineers, as a support to the design and maintenance of outdoor lighting installations, with special reference to astronomical observations. Elaborating issues from the first part, these contributions include examples that refer to specific outdoor lighting projects and to more general policy and educational measures. Written for designers of lighting equipment and managers of astronomical observatories, but also aimed at the authorities and decision makers responsible for the organization and maintenance of the public space, it will serve a good purpose in graduate or postgraduate curricula for scientists, engineers, economists and law students. This handbook fills the gap that exists between astronomical textbooks, engineering texts and popular brochures about light pollution.
