At the Edge of the Night Friedo Lampe, 2019-05-01 This poignant novel, beautifully translated by Simon Beattie, was, in Lampe's words, born into a regime where it could not breathe; he hoped that one day it might rise again. It has no one main character, but evokes the sensations and impressions of a sultry September evening on the waterfront of Bremen, with its charm and tenderness, squalor and lust. It contains a stream of images with many characters: children, old and young people, men and women, townsfolk, performers, students and seamen. Things happen as they happen, horrible things, touching things. Its depiction of raw reality was unacceptable to the Nazis: the book was seized by them in December 1933 and withdrawn from sale.

Essentials of Environmental Science Andrew Friedland, Rick Relyea, 2018-03-10 At just 15 chapters, Essentials of Environmental Science is ideal for a one-semester course. It takes the same non-biased approach as its parent text, teaching students to think critically about data presented. In addition to being briefer, Essentials is even more accessible placing less emphasis on math calculations. The coverage of ecology, agriculture, energy, and water has also been streamlined to provide a more focused treatment of the science concepts.

Influenza Virus and Vaccination Marta L. DeDiego, Aitor Nogales, 2020-05-28 The influenza virus poses a threat to human health and is responsible for global epidemics every year. In addition to seasonal infections, influenza can cause occasional pandemics of great consequence when novel viruses are introduced into humans. Despite the implementation of comprehensive vaccination programs, influenza viruses continue to pose an important and unpredictable global public health threat. They are one of the most significant causes of morbidity and mortality each year and have a significant economic impact. In recent years, research has been conducted to find alternative approaches to influenza vaccine development, including the generation of universal vaccines. Notably, significant progress in the field of influenza infection, transmission, and immunity have contributed to our understanding of influenza biology, and to expanding the technological approaches for the generation of more efficient strategies against influenza infections. Moreover, highly remarkable developments have been made in the implementation of new methodologies to evaluate the efficiency of vaccines and improve them for use on domestic animals such as poultry, horses, dogs or pigs. This enables us to decrease the exposure of humans to potentially pandemic viruses. The articles in this Special Issue will address the importance of influenza to human health and the advances in influenza research that have led to the development of better therapeutics and vaccination strategies.

Structure and Evolution of Invertebrate Nervous Systems Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement, behavior, and coordinated thinking. Invertebrate neurobiology has traditionally been studied in specific model organisms, whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention. This is the first major reference work in the field for 50 years, bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers. Presented in full colour throughout, Structure and Evolution of Invertebrate Nervous Systems synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy. These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron-specific antigens and fluorescence in-situ-hybridization, combined with visualization by confocal laser scanning microscopy. New approaches to analysing the structure of the nervous system are also included such as micro-computational tomography, cryo-soft X-ray tomography, and various 3-D visualization techniques. The book follows a systematic and phylogenetic structure, covering a broad range of taxa, interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives. This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology, morphology, zoology, phylogeny and evolution.

Global Status Report on Noncommunicable Diseases 2014 World Health Organization, 2014 This global status report on prevention and control of NCDs (2014), is framed around the nine voluntary global targets. The report provides data on the current situation, identifying bottlenecks as well as opportunities and priority actions for attaining the targets. The 2010 baseline estimates on NCD mortality and risk factors are provided so that countries can report on progress, starting in 2015. In addition, the report also provides the latest available estimates on NCD mortality (2012) and risk factors, 2010-2012. All ministries of health need to set national NCD targets and lead the development and implementation of policies and interventions to attain them. There is no single pathway to attain NCD targets that fits all countries, as they are at different points in their progress in the prevention and control of NCDs and at different levels of socioeconomic development. However all countries can benefit from the comprehensive response to attaining the voluntary global targets presented in this report.--Publisher description.

The Low-Carb Fraud T. Colin Campbell, Howard Jacobson, 2014-02-25 By now, the low-carb diet's refrain is a familiar one: Bread is bad for you. Fat doesn't matter. Carbs are the real reason you can't lose weight. The low-carb universe Dr. Atkins brought into being continues to expand. Low-carb diets, from South Beach to the Zone and beyond, are still the go-to method for weight-loss for millions. These diets' marketing may differ, but they all share two crucial components: the condemnation of "carbs and an emphasis on meat and fat for calories. Even the latest diet trend, the Paleo diet, is—despite its increased focus on (some) whole foods—just another variation on the same carbohydrate fears. In *The Low-Carb Fraud*, longtime leader in the nutritional science field T. Colin Campbell (author of *The China Study* and *Whole*) outlines where (and how) the low-carb proponents get it wrong: where the belief that carbohydrates are bad came from, and why it persists despite all the evidence to the contrary. The foods we misleadingly refer to as "carbs aren't all created equal—and treating them that way has major consequences for our nutritional well-being. If you're considering a low-carb diet, read this e-book first. It will change the way you think about what you eat—and how you should be eating, to lose weight and optimize your health, now and for the long term.

Immunotherapy of Type 1 Diabetes Domenico Andreani, Hubert Kolb, Paolo Pozzilli, 1989 Recent national, European and international diabetes meetings have seen controversial discussions on the potential benefit and also on ethical aspects of immune intervention in patients with Type 1 diabetes or in persons with a high risk of developing the disease.

Extraintestinal Manifestations of Coeliac Disease David Sanders, Marios Hadjivassiliou, 2019 Coeliac Disease (CD) affects at least 1% of the population. Classical CD refers to gastrointestinal presentations with anaemia and gastrointestinal symptoms. CD can, however, present with extraintestinal manifestations, the commonest of which are dermatitis herpetiformis and neurological presentations (e.g., ataxia, neuropathy, encephalopathy). Recognition and research into the pathophysiology of such manifestations is likely to enhance our understanding of this complex autoimmune disorder.

Murdoch, Deborah Theodoros, 2004-10-08 This book is the first to provide comprehensive coverage of the communication impairments that occur in association with multiple sclerosis.
