Extremely Loud Juliette Volcler,2015-06-02 "Everything you ever suspected or feared about music as a weapon, sound as torture . . . Disturbingly

illuminating in the possible ramifications” (Kirkus Reviews). In this troubling and wide-ranging account, acclaimed journalist Juliette Volcler looks at the long history of efforts by military and police forces to deploy sound against enemies, criminals, and law-abiding citizens. During the 2004 battle over the Iraqi city of Fallujah, US Marines bolted large speakers to the roofs of their Humvees, blasting AC/DC, Eminem, and Metallica songs through the city’s narrow streets as part of a targeted psychological operation against militants that has now become standard practice in American military operations in Afghanistan. In the historic center of Brussels, nausea-inducing sound waves are unleashed to prevent teenagers from lingering after hours. High-decibel, “nonlethal” sonic weapons have become the tools of choice for crowd control at major political demonstrations from Gaza to Wall Street and as a form of torture at Guantanamo and elsewhere. In an insidious merger of music, technology, and political repression, loud sound has emerged in the last decade as an unlikely mechanism for intimidating individuals as well as controlling large groups. “Thorough and well researched,” *Extremely Loud* documents and interrogates this little-known modern phenomenon, exposing it as a sinister threat to the peace and quiet that societies have traditionally craved (Publishers Weekly). “*Extremely Loud* makes you shiver, or cover your ears, at the technological buildup now at the service of the most sophisticated forms of repression.” –Libération

The Lonely Century Noreena Hertz, 2021-02-02 A bold, hopeful, and thought-

provoking account by “one of the world’s leading thinkers” (The Observer) of how we built a lonely world, how the pandemic accelerated the problem, and what we must do to come together again “A compelling vision for how we can bridge our many divides at this time of great change and disruption.”—Arianna Huffington, founder and CEO of Thrive Global “An important new book.”—The Economist NEXT BIG IDEA CLUB NOMINEE • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY WIRED (UK) AND THE DAILY TELEGRAPH Loneliness has become the defining condition of the twenty-first century. It is damaging our health, our wealth, and our happiness and even threatening our democracy. Never has it been more pervasive or more widespread, but never has there been more that we can do about it. Even before a global pandemic introduced us to terms like “social distancing,” the fabric of community was unraveling and our personal relationships were under threat. And technology isn’t the sole culprit. Equally to blame are the dismantling of civic institutions, the radical reorganization of the workplace, the mass migration to cities, and decades of neoliberal policies that have placed self-interest above the collective good. This is not merely a mental health crisis. Loneliness increases our risk of heart disease, cancer, and dementia. Statistically, it’s as bad for our health as smoking fifteen cigarettes a day. It’s also an economic crisis, costing us billions annually. And it’s a political crisis, as feelings of marginalization fuel divisiveness and extremism around the world. But it’s also a crisis we have the power to solve. Combining a decade of research with

firsthand reporting, Noreena Hertz takes us from a “how to read a face” class at an Ivy League university to isolated remote workers in London during lockdown, from “renting a friend” in Manhattan to nursing home residents knitting bonnets for their robot caregivers in Japan. Offering bold solutions ranging from compassionate AI to innovative models for urban living to new ways of reinvigorating our neighborhoods and reconciling our differences, The Lonely Century offers a hopeful and empowering vision for how to heal our fractured communities and restore connection in our lives.

The Mosquito Crusades Gordon Patterson,2009-04-06 Among the struggles of the twentieth century, the one between humans and mosquitoes may have been the most vexing, as demonstrated by the long battle to control these bloodsucking pests. As vectors of diseases such as malaria, yellow fever, encephalitis, and dengue fever, mosquitoes forced open a new chapter in the history of medical entomology. Based on extensive use of primary sources, The Mosquito Crusades traces this saga and the parallel efforts of civic groups in New Jersey's Meadowlands and along San Francisco Bay's east side to manage

the dangerous mosquito population. Providing readers with a fascinating exploration of the relationship between science, technology, and public policy, Gordon Patterson's narrative begins in New Jersey with John B. Smith's effort to develop a comprehensive plan and solution for mosquito control, one that would serve as a national model. From the Reed Commission's 1900 yellow fever experiment to the first Earth Day seventy years later, Patterson provides an eye-opening account of the crusade to curtail the deadly mosquito population.

Chemical and Physical Methods for Protecting Biopolymers Against Pests 0.

S. Kukovinets, 2008 Protection of natural biopolymers: proteins (collagen, keratin), carbohydrates (starch, cellulose) and others, is a very acute problem. Numerous fungi, insects and rodents damage raw materials, and finished products both during manufacturing and at storage. To study methods and protection facilities we systematised information on main types of biodestructors and gave numerous examples of synthesis of the most known and active preparations to control insects and other organisms damaging natural polymers in light and food industries. The monograph is written by a group of authors famous for their papers on chemistry of low-molecular bioregulators and means for plant protection.
