The Crack in the Cosmic Egg Joseph Chilton Pearce,2002-08-01 The classic work that shaped the thought of a generation with its powerful insights into the true nature of mind and reality. • Defines culture as a cosmic egg structured by the mind's drive for logical ordering of its universe. • Provides techniques allowing individuals to break through the vicious circle of logic-based systems to attain expanded ways of creative living and learning. The sum total of our notions of what the world is--and what we perceive its full potential to be--form a shell of rational thought in which we reside. This logical universe creates a vicious circle of reasoning that robs our minds of power and prevents us from reaching our true potential. To step beyond that circle requires a centering and focus that today's society assaults on every level. Through the insights of Teilhard, Tillich, Jung, Jesus, Carlos Castaneda, and others, Joseph Chilton Pearce provides a mode of thinking through which imagination can escape the mundane shell of current construct reality and leap into a new phase of human evolution. This enormously popular New Age classic is finally available again to challenge the assumptions of a new generation of readers and help them develop their potential through new creative modes of thinking. With a masterful synthesis of recent discoveries in physics, biology, and psychology, Pearce reveals the extraordinary relationship of mind and reality and nature's blueprint for a self-transcending humanity.

How We Learn Benedict Carey,2014-09-09 In the tradition of The Power of Habit and Thinking, Fast and Slow comes a practical, playful, and endlessly fascinating guide to what we really know about learning and memory today—and how we can apply it to our own lives. From an early age, it is drilled into our heads: Restlessness, distraction, and ignorance are the enemies of success. We’re told that learning is all self-discipline, that we must confine ourselves to designated study areas, turn off the music, and maintain a strict ritual if we want to ace that test, memorize that presentation, or nail that piano recital. But what if almost everything we were told about learning is wrong? And what if there was a way to achieve more with less effort? In How We Learn, award-winning science reporter Benedict Carey sifts through decades of education research and landmark studies to uncover the truth about how our brains absorb and retain information. What he discovers is that, from the moment we are born, we are all learning quickly, efficiently, and automatically; but in our zeal to systematize the process we have ignored valuable, naturally enjoyable learning tools like forgetting, sleeping, and daydreaming. Is a dedicated desk in a quiet room really the best way to study? Can altering your routine improve your recall? Are there times when distraction is good? Is repetition necessary? Carey’s search for answers to these questions yields a wealth of strategies that make learning more a part of our everyday lives—and less of a chore. By road testing many of the counterintuitive techniques described in this book, Carey shows how we can flex the neural muscles that make deep learning possible. Along the way he reveals why teachers should give final exams on the first day of class, why it’s wise to interleave subjects and concepts when learning any new skill, and when it’s smarter to stay up late prepping for that presentation than to rise early for one last cram session. And if this requires some suspension of disbelief, that’s because the research defies what we’ve been told, throughout our lives, about how best to learn. The brain is not like a muscle, at least not in any straightforward sense. It is something else altogether, sensitive to mood, to timing, to circadian rhythms, as well as to location and environment. It doesn’t take orders well, to put it mildly. If the brain is a learning machine, then it is an eccentric one. In How We Learn, Benedict Carey shows us how to exploit its quirks to our advantage.

Now: The Physics of Time Richard A. Muller,2016-09-20 From the celebrated author of the best-selling Physics for Future Presidents comes “a provocative, strongly argued book on the fundamental nature of time” (Lee Smolin). You are reading the word now right now. But what does that mean? Now has bedeviled philosophers, priests, and modern-day physicists from Augustine to Einstein and beyond. In Now, eminent physicist Richard A. Muller takes up the challenge. He begins with remarkably clear explanations of relativity, entropy, entanglement, the Big Bang, and more, setting the stage for his own revolutionary theory of time, one that makes testable predictions. Muller’s monumental work will spark major debate about the most fundamental assumptions of our universe, and may crack one of physics’ longest-standing enigmas.

Fearless Intelligence Michael Benner,2018-07-15 The best parts of you are hidden where you're most afraid to look. --Michael Benner, *Fearless Intelligence* Fear is a doorway to understanding yourself better. The secret is to plumb the depth and breadth of your anxiety and confusion in relaxed levels of expanded awareness. Becoming more self-aware of your anxious feelings reveals the personal wisdom hidden within heartache and upset. As we understand our self better, we become less alienated and more content -- calmer, happier, and more self-confident. Fewer random thoughts demand our attention. This or that occurs as this and that, and behavior becomes less reflexive -- more appropriate, even-tempered and well reasoned. Soon, defensiveness yields to acceptance, competition surrenders to cooperation -- lines fade, borders dissolve, and your perspective expands to include the 'Wholeness' of life.

Women Who Think Too Much Susan Nolen-Hoeksema,2004-02-01 From one of the nation's preeminent experts on women and emotion, a breakthrough new book about how to stop negative thinking and become more productive It's no surprise that our fast-paced, overly self-analytical culture is pushing many people-especially women-to spend countless hours thinking about negative ideas, feelings, and experiences. Renowned psychologist Dr. Susan Nolen-Hoeksema calls this overthinking, and her groundbreaking research shows that an increasing number of women-more than half of those in her extensive study-are doing it too much and too often, hindering their ability to lead a satisfying life. Overthinking can be anything from fretting about the big questions such as What am I doing with my life? to losing sleep over a friend's innocent comment. It is causing many women to end up sad, anxious, or seriously depressed, and Nolen-Hoeksema challenges the assumption-heralded by so many pop-psychology pundits of the last several decades-that constantly expressing and analyzing our emotions is a good thing. In *Women Who Think Too Much*, Nolen-Hoeksema shows us what causes so many women to be overthinkers and provides concrete strategies that can be used to escape these negative thoughts, move to higher ground, and live more productively. *Women Who Think Too Much* will change lives and is destined to become a self-help classic.

Present Moment Awareness Shannon Duncan,2011-02-09 Filled with powerful but easily accessible concepts and exercises, *Present Moment Awareness* shows readers how they can drop their emotional baggage, calm their worries about the future, and start enjoying the peace and joyfulness that can only be found in the Now. Author Shannon Duncan reveals how opening to the present moment can allow us to discover the limiting perceptions, emotional turmoil, and habitual reactions that so often dictate our experience of life. He shows how we can discover the true causes of our stress and discontent, transform our emotions from rulers into advisers, and start appreciating the gift of life, right here and now.
