Indigenous People and Mobile Technologies Laurel Evelyn Dyson, Stephen Grant, Max Hendriks, 2015-10-05 In the rich tradition of mobile communication studies and new media, this volume examines how mobile technologies are being embraced by Indigenous people all over the world. As mobile phones have revolutionised society both in developed and developing countries, so Indigenous people are using mobile devices to bring their communities into the twenty-first century. The explosion of mobile devices and applications in Indigenous communities addresses issues of isolation and building an environment for the learning and sharing of knowledge, providing support for cultural and language revitalisation, and offering the means for social and economic renewal. This book explores how mobile technologies are overcoming disadvantage and the tyrannies of distance, allowing benefits to flow directly to Indigenous people and bringing wide-ranging changes to their lives. It begins with general issues and theoretical perspectives followed by empirical case studies that include the establishment of Indigenous mobile networks and practices, mobile technologies for social change and, finally, the ways in which mobile technology is being used to sustain Indigenous culture and language.

The Impact of Health Insurance in Low- and Middle-Income Countries Maria-Luisa Escobar,Charles C. Griffin,R. Paul Shaw,2011-01-01 Over the past twenty years, many low- and middle-income countries have experimented with health insurance options. While their plans have varied widely in scale and ambition, their goals are the same: to make health services more affordable through the use of public subsidies while also moving care providers partially or fully into competitive markets. Colombia embarked in 1993 on a fifteen-year effort to cover its entire population with insurance, in combination with greater freedom to choose among providers. A decade later Mexico followed suit with a program tailored to its federal system. Several African nations have introduced new programs in the past decade, and many are testing options for reform. For the past twenty years, Eastern Europe has been shifting from government-run care to insurance-based competitive systems, and both China and India have experimental programs to expand coverage. These nations are betting that insurance-based health care financing can increase the accessibility of services, increase providers' productivity, and change the population's health care use patterns, mirroring the development of health systems in most OECD countries. Until now, however, we have known little about the actual effects of these dramatic policy changes. Understanding the impact of health insurance-based care is key to the public policy debate of whether to extend insurance to low-income populations—and if so, how to do it—or to serve them through other means. Using recent household data, this book presents evidence of the impact of insurance programs in China, Colombia, Costa

Rica, Ghana, Indonesia, Namibia, and Peru. The contributors also discuss potential design improvements that could increase impact. They provide innovative insights on improving the evaluation of health insurance reforms and on building a robust knowledge base to guide policy as other countries tackle the health insurance challenge.
