Human-Animal Relationships in Equestrian Sport and Leisure Katherine Dashper, 2016-10-04 Riding, training and caring for horses are visceral experiences that require the immersion of both body and mind. This book provides an in-depth understanding of human-horse relationships and interactions as embodied in equestrian sport and leisure. As a closely focused ethnographic study of the horse world, it explores the key themes of partnership and collaboration in human-horse communication, the formation of individual and collective identities performed through involvement in the horse world, and human-horse interaction as an embodied way of being. This book argues that encounters between humans and horses can reveal the ways that human society has been and continues to be structured through intersection with nonhuman others. Equestrian sport and leisure provides an apt context for considering how such concepts of interspecies communication and collaboration are negotiated, managed, (mis)understood and performed, resulting in a uniquely embodied way of knowing and being in the world. Human-Animal Relationships in Equestrian Sport and Leisure is fascinating reading for anyone interested in equestrianism, human-animal studies, theories of embodiment, the sociology of sport, or sport and social theory.

Ethics and Sport in Europe Dominique Bodin, Gaelle Sempé, 2011-01-01 Defending ethics in sport is vital in order to combat the problems of corruption, violence, drugs, extremism and other forms of discrimination it is currently

facing. Sport reflects nothing more and nothing less than the societies in which it takes place. However, if sport is to continue to bring benefits for individuals and societies, it cannot afford to neglect its ethical values or ignore these scourges. The major role of the Council of Europe and the Enlarged Partial Agreement on Sport (EPAS) in addressing the new challenges to sports ethics was confirmed by the 11th Council of Europe Conference of Ministers responsible for Sport, held in Athens on 11 and 12 December 2008. A political impetus was given on 16 June 2010 by the Committee of Ministers, with the adoption of an updated version of the Code of Sports Ethics (Recommendation CM/Rec(2010)9), emphasising the requisite co-ordination between governments and sports organisations. The EPAS prepared the ministerial conference and stepped up its work in an international conference organised with the University of Rennes, which was attended by political leaders, athletes, researchers and officials from the voluntary sector. The key experiences described in the conference and the thoughts that it prompted are described in this publication. All the writers share the concern that the end result should be practical action – particularly in terms of the setting of standards – that falls within the remit of the EPAS and promotes the Council of Europe's core values.

Post-Capitalist Society Peter F. Drucker, 2013-10-22 *Post-Capitalist Society* provides an analysis of the transformation of the world into a post-capitalist society. This transformation, which will not be completed until 2010 or 2020, has already changed the political, economic, social, and moral landscape of the world. The book reviews and revises the social, economic, and political history of the Age of Capitalism and of the nation state. It argues that the real and controlling resource and the absolutely decisive 'factor of production' is neither capital, nor land, nor labor. It is knowledge. Instead of capitalists and proletarians, the classes of the post-capitalist society are knowledge workers and service workers. This book covers a wide range of topics, dealing with post-capitalist society; with post-capitalist polity; and with new challenges to knowledge itself. The focus is on the developed countries—on Europe, on the United States and Canada, on Japan and the newly developed

countries on the mainland of Asia, rather than on the developing countries of the Third World. The areas of discussion—Society, Polity, and Knowledge—are arrayed in order of predictability.

Predictive Soil Mapping with R Tomislav Hengl, Robert A. MacMillan, 2019-02-16 Predictive Soil Mapping (PSM) is based on applying statistical and/or machine learning techniques to fit models for the purpose of producing spatial and/or spatiotemporal predictions of soil variables i.e. maps of soil properties and classes at different resolutions. It is a multidisciplinary field combining statistics, data science, soil science, physical geography, remote sensing, geoinformation science and a number of other sciences. Predictive Soil Mapping with R is about understanding the main concepts behind soil mapping, mastering R packages that can be used to produce high quality soil maps, and about optimizing all processes involved so that also the production costs can be reduced. The online version of the book is available at: <https://envirometrix.github.io/PredictiveSoilMapping/> Pull requests and general comments are welcome. These materials are based on technical tutorials initially developed by the ISRIC's Global Soil Information Facilities (GSIF) development team over the period 2014-2017

Reengineering Management James Champy, 2009-10-13 The co-author of the monumental bestseller Reengineering the Corporation continues the reengineering revolution with another national bestseller that has already sold more than 165,000 copies in hardcover Reengineering Management is a brilliant, practical and much needed book on the most powerful management idea of the decade. Reengineering—changing the traditional and outdated organization, processes and culture of a company—is corporate America's greatest challenge today. In Reengineering Management, Champy examines the far-reaching changes managers must make for themselves and their companies to succeed in an era of unprecedented competition. Through his extensive consulting and research work, he shows how reengineering succeeds only when managers reinvent their own jobs and managerial styles. Otherwise, the ultra-efficient and effective reengineered processes for acquiring and serving customers, filling orders, bringing new concepts to market and other key business activities eventually fall apart. Champy illustrates this new management agenda through first-hand experiences of managers of reengineered operations at Federal Express, Wisconsin Electric, CIGNA Health Care, Hewlett-Packard, AT&T Universal Card Services and other companies. Champy shows how they are mastering the managerial challenges of reengineering, and as a result are making their organizations exciting and competitive. As more and more organizations reengineer, the experiences of these managers will become an insiders' guide to managerial life in the company of the future. Reengineering Management picks up where Reengineering the Corporation left off—by exploring the managerial implications of the reengineered workplace. As reengineering becomes critical to all organizations, Reengineering Management will be the road map for managerial success in the future. It is, indeed, the manifesto for the next managerial revolution.

The End of Physiotherapy David A. Nicholls, 2017-07-31 Physiotherapy is arriving at a critical point in its history. Since World War I, physiotherapy has been one of the largest allied health professions and the established provider of orthodox physical rehabilitation. But ageing populations of increasingly chronically ill people, a growing scepticism towards biomedicine and the changing economy of healthcare threaten physiotherapy's long-held status. Paradoxically, physiotherapy's affinity for treating the 'body-as-machine' has resulted in an almost complete inability to identify the roots of the profession's present problems, or define possible ways forward. Physiotherapists need to engage in critically informed theoretical discussion about the profession's past, present and future - to explore their practice from economic, philosophical, political and sociological perspectives. The End of Physiotherapy aims to explain how physiotherapy has arrived at this critical point in its history, and to point to a new future for the profession. The book draws on critical analyses of the historical and social conditions that have made present-day physiotherapy possible. Nicholls examines some of the key discourses that have had a positive impact on the profession in the past, but now threaten to derail it. This book makes it possible for physiotherapists to think otherwise about their profession and their day-to-day practice. It will be essential reading for scholars and students of physiotherapy, interprofessional and community rehabilitation, as well as appealing to those working in medical sociology, the medical humanities, medical history and health care policy.

Qualitative Research in European Migration Studies Ricard Zapata-Barrero, Evren Yalaz, 2018-06-19 This open access book covers the main issues, challenges and techniques concerning the application of qualitative methodologies to the study of migration. It discusses theoretical, epistemological and empirical questions that must be considered before, during, and after undertaking qualitative research in migration studies. It also covers recent innovative developments and addresses the key issues and major challenges that qualitative migration research may face at different stages i.e. crafting the research questions, defining approaches, developing concepts and theoretical frameworks, mapping categories, selecting cases, dealing with concerns of self-reflection, collecting and processing empirical evidence through various techniques, including visual data, dealing with ethical issues, and developing policy-research dialogues. Each chapter discusses relative strengths and limitations of qualitative

research. The chapters also identify the main drivers for qualitative research development in migration studies. It is a unique volume as it brings together a multidisciplinary perspective as well as illustrations of different issues derived from the research experience of the recognized authors. One additional value of this book is its geographic focus on Europe. It seeks to explore theoretical and methodological issues that are raised by distinctive features of the European context. This volume will be a useful reference source for scholars and professionals in migration studies and in social sciences as well. The publication is also addressed to graduate and post-graduate students and, more generally, to those who embark on the task of doing qualitative research for the first time in the field of migration.

Atom - Molecule Collision Theory Richard Barry Bernstein, 2013-11-11 The broad field of molecular collisions is one of considerable current interest, one in which there is a great deal of research activity, both experimental and theoretical. This is probably because elastic, inelastic, and reactive intermolecular collisions are of central importance in many of the fundamental processes of chemistry and physics. One small area of this field, namely atom-molecule collisions, is now beginning to be understood from first principles. Although the more general subject of the collisions of polyatomic molecules is of great importance and intrinsic interest, it is still too complex from the viewpoint of theoretical understanding. However, for atoms and simple molecules the essential theory is well developed, and computational methods are sufficiently advanced that calculations can now be favorably compared with experimental results. This coming together of the subject (and, incidentally, of physicists and chemists !), though still in an early stage, signals that the time is ripe for an appraisal and review of the theoretical basis of atom-molecule collisions. It is especially important for the experimentalist in the field to have a working knowledge of the theory and computational methods required to describe the experimentally observable behavior of the system. By now many of the alternative theoretical approaches and computational procedures have been tested and intercompared. More-or-less optimal methods for dealing with each aspect are emerging. In many cases working equations, even schematic algorithms, have been developed, with assumptions and caveats delineated.

People and Pixels National Research Council, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Committee on the Human Dimensions of Global Change, 1998-06-21 Space-based sensors are giving us an ever-closer and more comprehensive look at the earth's surface; they also have the potential to tell us about human activity. This volume examines the possibilities for using remote sensing technology to improve understanding of social processes and human-environment interactions. Examples include deforestation and regrowth in Brazil, population-environment interactions in Thailand, ancient and modern rural development in Guatemala, and urbanization in the United States, as well as early warnings of famine and disease outbreaks. The book also provides information on current sources of remotely sensed data and metadata and discusses what is involved in establishing effective collaborative efforts between scientists working with remote sensing technology and those working on social and environmental issues.
