Semantic Technologies in Idea Management Systems: A Model for Interoperability, Linking and

Filtering , Idea Management Systems are web applications that implement the notion of open innovation through crowdsourcing. Typically, organizations use those kind of systems to connect to large communities in order to gather ideas for improvement of products or services. Originating from simple suggestion boxes, Idea Management Systems advanced beyond collecting ideas and aspire to be a knowledge management solution capable to select best ideas via collaborative as well as expert assessment methods. In practice, however, the contemporary systems still face a number of problems usually related to information overflow and recognizing questionable quality of submissions with reasonable time and effort allocation. This thesis focuses on idea assessment problem area and contributes a number of solutions that allow to filter, compare and evaluate ideas submitted into an Idea Management System. With respect to Idea Management System interoperability the thesis proposes theoretical model of Idea Life Cycle and formalizes it as the Gi2MO ontology which enables to go beyond the boundaries of a single system to compare and assess innovation in an organization wide or market wide context. Furthermore, based on the ontology, the thesis builds a number of solutions for improving idea assessment via: community opinion analysis (MARL), annotation of idea characteristics (Gi2MO Types) and study of idea relationships (Gi2MO Links). The main achievements of the thesis are: application of theoretical innovation models for practice of Idea Management to successfully recognize the differentiation between communities, opinion metrics and their recognition as a new tool for idea assessment, discovery of new relationship types between ideas and their impact on idea clustering. Finally, the thesis outcome is establishment of Gi2MO Project that serves as an incubator for Idea Management solutions and mature open-source software alternatives for the widely available commercial suites. From the academic point of view the project delivers resources to undertake experiments in the Idea Management Systems area and managed to become a forum that

gathered a number of academic and industrial partners.

How to Build an App with No Code Evan Drake, 2020-03 CREATE AND LAUNCH YOUR APP IDEA IN NO TIME, WITH NO CODE This book is for marketers, creative designers, and entrepreneurs who want to build an app for iOS, Android, or the web without writing a line of code. Today, app development is easier than ever. This is a new era, where you can get your idea off the ground in 1-5 days instead of 3 months. Are you an entrepreneur, creative artist, or marketer with a software idea? If so, this ebook is for you. It outlines 7 steps to build, release, and scale your app for a large audience. You'll have your own platform running in a fraction of the time and at a fraction of the cost that it takes to pay a developer. This approach is more lean, agile, and rapid. You probably don't need to learn Javascript, Objective-C, Python, or any other programming language, and you don't need to find anybody who programs either. All you need is a creative idea and the discipline to see it through. Think of yourself as a home builder and general contractor, rather than an architect. This ebook is jam-packed with resources, tools, and next steps to get you started in no time, with no code. The goal is to keep it as simple as possible. Read this ebook quickly, and start developing your ideas right away. Author Evan Drake is a digital marketer living in Silicon Valley. He attended the Wharton School of Business, and worked at Apple for 10 years. Outside of work, he's a wannabe entrepreneur. Throughout this ebook, he'll show you how to build your own no-code app in no time. He'll share resources, so you can learn how easy it is to get started. The app development model he's created is

called GOSCALE. Each letter stands for a step. The goal here is to get you started with a lean process that is easy to replicate. At its core, this is an entrepreneurial process. It is important that you follow each step. You'll start with generating your idea, and then move on to outlining and scaffolding it. After you cast the net, you will analyze performance, and learn to pivot. Finally, this ebook describes how to engage your users with no code. Though there is no straight line when building an app, the intention here is to outline the stages of the process. This ebook is more focused on principles than tools. The tools will change over time. So long as you have the principles, you can easily create an app with no code, and the GOSCALE framework: Step 1: Generate Your Idea Step 2: Outline Your Vision Step 3: Scaffold Your App Step 4: Cast A Wide Net Step 5: Analyze Performance Step 6: Learn And Pivot Step 7: Engage Your Users We're only in the teenage years of mobile app development. The no-code movement is only getting started. As the app market matures, for most entrepreneurs, creatives, and marketers, it will become less important to code, and more important to build relevant brands. The way to distinguish yourself beyond today, is through design and execution. It's a no-code world. Go and scale it.
