Ion Traps for Tomorrow's Applications M. Knoop, I. Marzoli, G. Morigi, 2015-07-21 Ion trapping was first accomplished in Europe more than 50 years ago. Since then, research and development have increased steadily, and the last decades have seen a remarkable growth in applications, mainly

due to the improvement of laser-based techniques for spectroscopy, cooling and the manipulation of ions. Nowadays ion trapping plays a crucial role in a wide range of disciplines, including atomic and plasma physics, chemistry, high precision measurement, high energy physics and the emerging field of quantum technologies. This book presents lectures and reports from the Enrico Fermi School 'Ion Traps for Tomorrow's Applications', held in Varenna, Italy, in July 2013. Reflecting the aim of the school to exploit diversity and stimulate cross fertilization, the selected topics and highlights in this book partly review the wide range of subjects discussed during the course, while providing an overview of this topical domain. As well as providing a useful reference guide, the book will be a source of inspiration for all those planning to work on ion trapping in the future.

Beneficial Ownership in International Tax Law Angelika Meindl-Ringler, 2016-06-07 In international tax law, the term 'beneficial ownership' refers to which parties involved in a cross-border transaction are entitled to tax treaty benefits. However, determining beneficial ownership is a complex and often disputed issue, subject to different meanings in different countries. Archival research on its early use in tax treaties and in the developing OECD Model reveals that its meaning has changed dramatically over the decades, leading to new interpretations significantly affecting current tax practice and scholarship. This book, dedicated to establishing how beneficial ownership should ideally be interpreted, compares the use and interpretation of beneficial ownership, both current and historical, in a wide range of national jurisdictions as well as the EU, ultimately shedding a clearer light than has heretofore been available on the meaning of the term. In her very thorough analysis of the application

of beneficial ownership, the author touches on such aspects as the following: – historical development of the beneficial ownership requirement as used in tax treaties and in the OECD Model Tax Convention on Income and on Capital; – rules of double taxation conventions; – application of the OECD’s Action Plan on Base Erosion and Profit-Shifting (BEPS); – the problem of so-called ‘white income’; – use of the substance-over-form principle; – attribution-of-income rules; and – the role of agents, nominees, and conduit companies. Specific analysis of the use and interpretation of beneficial ownership in a domestic law and treaty context in numerous jurisdictions – with particular emphasis on the United Kingdom, Australia, the United States, and Germany – is a major feature of the presentation. As a thorough guide to determining whether a person claiming tax treaty benefits is the true owner – and which parties are excluded from treaty benefits and to what extent – this book will be of immeasurable value to lawyers, tax authorities, policymakers, and other professionals working with taxable international transactions of any kind.

Pollution and the Atmosphere Marco Ragazzi, 2017-01-12 This title includes a number of Open Access chapters. This new compendium volume examines the significant impact of air quality on human health. Assessing air pollution in complex morphologies has become an important issue in order to implement mitigation measures and limit emissions from the most relevant sources, such as waste incineration, traffic emissions, emissions from fuel and electricity production, and household emissions. These pollutants result in adverse health effects, material damage, damage to ecosystems, and global climate change. The book looks at these issues and is divided into several sections, covering air pollution and where we came from and where we’re headed waste incineration and its impact on air quality air pollution vehicle and transportation emissions emissions from fuel and electricity production The chapters in *Pollution and the Atmosphere: Designs for Reduced Emissions*

contain recent research looking at the two major components of air pollution: air pollution control and air-quality engineering. Air pollution control focuses on the fundamentals of air pollutant formation in process technologies and the identification of options for mitigating or preventing air pollutant emissions. Air quality engineering deals with large-scale, multi-source control strategies, with focus on the physics and chemistry of pollutant interactions in the atmosphere.

Quantum Many-Body Physics of Ultracold Molecules in Optical Lattices Michael L. Wall, 2015-04-20 This thesis investigates ultracold molecules as a resource for novel quantum many-body physics, in particular by utilizing their rich internal structure and strong, long-range dipole-dipole interactions. In addition, numerical methods based on matrix product states are analyzed in detail, and general algorithms for investigating the static and dynamic properties of essentially arbitrary one-dimensional quantum many-body systems are put forth. Finally, this thesis covers open-source implementations of matrix product state algorithms, as well as educational material designed to aid in the use of understanding such methods.

Computational Social Science and Complex Systems J. Kertész,R.N. Mantegna,S. Miccichè,2019-11-20 For many years, the development of large-scale quantitative social science was

hindered by a lack of data. Traditional methods of data collection like surveys were very useful, but were limited. The situation has of course changed with the development of computing and information communication technology, and we now live in a world of data deluge, where the question has become how to extract important information from the plethora of data that can be accessed. Big Data has made it possible to study societal questions which were once impossible to deal with, but new tools and new multidisciplinary approaches are required. Physicists, together with economists, sociologists, computer scientists, etc. have played an important role in their development. This book presents the 9 lectures delivered at the CCIII Summer Course Computational Social Science and Complex Systems, held as part of the International School of Physics Enrico Fermi in Varenna, Italy, from 16-21 July 2018. The course had the aim of presenting some of the recent developments in the interdisciplinary fields of computational social science and econophysics to PhD students and young researchers, with lectures focused on recent problems investigated in computational social science. Addressing some of the basic questions and many of the subtleties of the emerging field of computational social science, the book will be of interest to students, researchers and advanced research professionals alike.

The Australian Policy Handbook Catherine Althaus, Sarah Ball, Peter Bridgman, Glyn Davis, David Threlfall, 2022-12-21 The seventh edition of this classic handbook on the policy process is fully updated, featuring new material on policy making amid local and global disruption, the contestable nature of modern policy advice, commissioning and contracting, public engagement and policy success and failure. The Australian Policy Handbook shows how public policy permeates every aspect of our lives. It is the stuff of government, justifying taxes, driving legislation and shaping our social services. Public policy gives us roads, railways and airports, emergency services, justice, education

and health services, defence, industry development and natural resource management. While politicians make the decisions, public servants provide analysis and support for those choices. This updated edition includes new visuals and introduces a series of case studies for the first time. These cases—covering family violence, behavioural economics, justice reinvestment, child protection and more—illustrate the personal and professional challenges of policymaking practice. Drawing on their extensive practical and academic experience, the authors outline the processes used in making public policy. They systematically explain the relationships between political decision makers, public service advisers, community participants and those charged with implementation. The Australian Policy Handbook remains the essential guide for students and practitioners of policy making in Australia.

Australia's Health 2012, 2012

Archivists, Collectors, Dealers, and Replevin Elizabeth H. Dow, 2012 Today, governmental archivists and manuscript collectors--both private collectors and collecting repositories--are in conflict and competition for government documents that come out of private hands and onto the market. This book presents both sides of the issue and examines them dispassionately. It includes a historical review of institutional and state-sponsored collecting of documents, an evaluation of state and federal statutes on public documents in private hands, a careful look at the perspectives of the various parties involved in the conflict, and tales of theft and neglect as well as helpful case studies.

Dynamics Near Quantum Criticality in Two Space Dimensions Snir Gazit, 2015-06-09 This work addresses dynamical aspects of quantum criticality in two space dimensions. It probes two energy scales: the amplitude (Higgs) mode, which describes fluctuations of the order parameter amplitude in the broken symmetry phase and the dual vortex superfluid stiffness. The results demonstrate that the amplitude mode can be probed arbitrarily close to criticality in the universal line shape of the scalar

susceptibility and the optical conductivity. The hallmark of quantum criticality is the emergence of softening energy scales near the phase transition. In addition, the author employs the charge-vortex duality to show that the capacitance of the Mott insulator near the superfluid to insulator phase transition serves as a probe for the dual vortex superfluid stiffness. The numerical methods employed are described in detail, in particular a worm algorithm for $O(N)$ relativistic models and methods for numerical analytic continuation of quantum Monte Carlo data. The predictions obtained are particularly relevant to recent experiments in cold atomic systems and disordered superconductors.
