Goldfish in the Parlour John Simons, 2023-01-01

"For the first time, fish became our companions and a corner of many a Victorian parlour was given over to housing tiny fragments of their world enclosed in glass." The experience of seeing a fish swimming in a glass tank is one we take for granted now but in Victorian England this was a remarkable sight. People had simply not been able to see fish as they now could with the invention of the aquarium and everything that went with it. Goldfish in the Parlour looks at the boom in the building of public aquariums, as well as the craze for home aquariums and visiting the seaside, during the reign of Queen Victoria. Furthermore, this book considers how people see and meet animals and, importantly, in what institutions and in what contexts these encounters happen. John Simons uncovers the sweeping consequences of the Victorian obsession with marine animals by looking at naturalist Frank Buckland's Museum of Economic Fish Culture and the role of fish in the Victorian economy, the development of angling as a sport divided along class lines, the seeding of Empire with British fish and comparisons with aquarium building in Europe, USA and Australia. Goldfish in the Parlour interrogates the craze that took over Victorian England when aquariums "introduced" fish to parks, zoos and parlours.

Dynamic Aquaria Walter H. Adey, Karen Loveland, 2011-08-29 In its third edition, this praised book demonstrates how the living systems modeling of aquatic ecosystems for ecological, biological and physiological research, and ecosystem restoration can produce answers to very complex ecological questions. Dynamic Aquaria further offers an understanding developed in 25 years of living ecosystem modeling and discusses how this knowledge has produced methods of efficiently solving many environmental problems. Public education through this methodology is the additional key to the broader ecosystem understanding necessary to allow human society to pass through the next evolutionary bottleneck of our species. Living systems modeling as a wide spectrum educational tool can provide a primary vehicle for that essential step. This third editon covers the many technological and biological developments in the eight plus years since the second edition, providing updated technological advice and describing many new example aquarium environments. Includes 16 page color insert with 57 color plates and 25% new photographs Offers 300 figures and 75 tables New chapter on Biogeography Over 50% new research in various chapters Significant updates in chapters include: The

understanding of coral reef function especially the relationship between photosynthesis and calcification The use of living system models to solve problems of biogeography and the geographic dispersal and interaction of species populations The development of new techniques for global scale restoration of water and atmosphere The development of new techniques for closed system, sustainable aquaculture

Aquarium Making: Fishkeeping and Maintenance

Mundy Obilor Jim,2019-02-23 For centuries, fish have been found worthy of keeping as pets or in captivity by people and the interests have grown

continually due to the many fun ways of making the aquarium and caring for the fish. Fish has become one of the most popular pets in many parts of the world. Fish-keeping has been advanced in recent decades with fancier and easier methods and even the breeding of fish for pets has improved greatly in terms of techniques. This book is for both experienced fish-keepers who have had aquariums for a considerable period of time and for new aquarium hobbyists alike. It is for those who want to build and set up their own aquariums and for those who wonder how they can dismantle the aquarium accessories and still be able to set up the aquarium to function appropriately. It also aims at teaching how to properly maintain an aquarium; feed the fish adequately, and know when they are sick or need attention and take good care of them. A lot has been learnt about different types of fish that can be nicely kept as pets in aquariums. We now want to keep beautiful fish like the goldfish, those with striking colours such as the zebra danios and even the odd-looking ones like the leaf-fish and longnose. We have come to know fish which can survive long in aquariums, types of environment that favour some particular fish, compatibility of fish, etc. The book will surely serve as an elaborate guideline which I believe will also enable anyone interested in the aquarium hobby to benefit from and even study further, especially in deeper areas like breeding. It starts with the make-up of an aquarium in chapter 1. Chapter 2 renders several crucial tips while chapter 3 dwells on feeding and gives some tips on breeding. No one will ignore the

challenges or common problems and diseases associated with keeping an aquarium and these are treated in chapter 4. The most commonly kept aquarium pet, the goldfish get chapter 5 and finally, in chapter 6, a step-by -step approach in setting up an aquarium is outlined; and this will help those who just want to set up an aquarium right away. First published as an eBook, the book contains new sections and updates to existing sections. In addition, a set of exercises and multiple-choice questions have been added at the end of each chapter to help students and hobbyists alike.
