An Educational Calamity Uche Amaechi, Alysha Banerji, Margaret Wang, 2021-03-27

The Covid-19 pandemic caused major disruptions to education around the world. Since the World Health Organization declared a pandemic on March 11, 2020, most students on the planet were affected by the interruption of in-person schooling. To mitigate the educational loss such interruption would cause, education authorities the world over created a variety of alternative mechanisms of education delivery. They did so quickly and with insufficient knowledge about what would work well, for which children, and for what aspects of the schooling experience. Having to create such alternative arrangements in short order was the ultimate adaptive leadership challenge, one for which no playbook existed, one for which solutions would have to be invented, rather than drawn from existing technical knowledge. The nature of the challenge differed across the world and regions, and it differed also within countries as a function of the differential public health and economic impact of the pandemic on communities, and of variations in institutional and financial resources available to redress such impact, including availability of digital infrastructure and previous knowledge and experience of teachers and students with digital pedagogies and other resources to create alternative education delivery systems. Sustaining educational opportunities amidst these challenges created by the pandemic was an example of adaptive education response not to a unique unexpected challenge but to one in a larger class of problems, just one of the many adaptive conundrums facing communities and societies. Beyond the challenges resulting from the pandemic, other complications of that sort predating the pandemic included those resulting from poverty, inequality, social inclusion, governance, climate change, among others. In some ways, the pandemic served as an accelerant for some of those, augmenting their impact or underscoring the urgency of addressing them. Adaptive puzzles of this sort, including pandemics, are likely to continue to impact education systems in the foreseeable future. This makes it necessary to strengthen the capacity of education systems to respond to them. Reimagining education systems so they are resilient in the face of adaptive challenges is an opportunity to mobilize new talent and institutional resources. Partnerships between school systems and universities can contribute to those reimagined and more resilient systems, they can enhance the institutional capacity of education systems to devise solutions and to implement them. Such partnerships are also an opportunity for universities to be more deliberate in integrating their three core functions of research, teaching and outreach in service of addressing significant social challenges in a context in rapid flux. In this book we present the results of one approach to produce the integration between research, teaching and outreach just described, resulting from engaging graduate students in collaborations with school systems for the purpose of helping identify ways to sustain educational opportunity during the disruption caused by the pandemic. This activity engaged our students in research and analysis, contributing to their education, and it engaged them in service to society. The book examines what happened to educational opportunity during the Covid-19 pandemic in Bangladesh, Belize, the municipality of Santa Ana in Costa Rica, Guatemala, Kenya, in the States of Sinaloa and Quintana Roo in Mexico, South Africa, United Arab Emirates, and in the United States in Richardson Independent School District in Texas. It offers a systematic analysis of policy options to sustain educational opportunity during the pandemic.

Handbook of Research on Bioeconomy and Economic Ecosystems Pego,

Ana, 2023-07-19 Bioeconomy is an essential natural capital for life, citizen well-being, and societal prosperity. After decades of intense damaging use, pollution, and hydrological stress, Europe's ecosystems are acutely threatened with serious degradation. This situation not only means acute economic loss, but also entails catastrophic ecological, social, and cultural damage. Handbook of Research on Bioeconomy and Economic

Ecosystems is a critical resource that explores the conservation of ecosystems and their biodiversity and discusses potential new challenges in terms of the economic, social, and environmental path for Europe and other regions of the world. Featuring research on topics such as bioeconomy, circular economy, and economic and social analysis, this book is ideally designed for city authorities, experts, officers, business representatives, economists, politicians, academicians, and researchers.

The Book of Daniel E.L. Doctorow, 2010-11-10 The central figure of this novel is a young man whose parents were executed for conspiring to steal atomic secrets for Russia. His name is Daniel Isaacson, and as the story opens, his parents have been dead for many years. He has had a long time to adjust to their deaths. He has not adjusted. Out of the shambles of his childhood, he has constructed a new life—marriage to an adoring girl who gives him a son of his own, and a career in scholarship. It is a life that enrages him. In the silence of the library at Columbia University, where he is supposedly writing a Ph.D. dissertation, Daniel composes something quite different. It is a confession of his most intimate relationships—with his wife, his foster parents, and his kid sister Susan, whose own radicalism so reproaches him. It is a book of memories: riding a bus with his parents to the ill-fated Paul Robeson concert in Peekskill; watching the FBI take his father away; appearing with Susan at rallies protesting their parents' innocence; visiting his mother and father in the Death House. It is a book of investigation: transcribing Daniel's interviews with people who knew his parents, or who knew about them; and logging his strange researches and discoveries in the library stacks. It is a book of judgments of everyone involved in the case—lawyers, police, informers, friends, and the Isaacson family itself. It is a book rich in characters, from elderly grand- mothers of immigrant culture, to covert radicals of the McCarthy era, to hippie marchers on the Pen-tagon. It is a book that spans the quarter-century of American life since World War II. It is a book about the nature of Left politics in this country—its sacrificial rites, its peculiar cruelties, its humility, its bitterness. It is a book about some of the beautiful and terrible feelings of childhood. It is about the nature of guilt and innocence, and about the relations of people to nations. It is *The Book of Daniel*.

Public policies and food systems in Latin America Jean-François Le Coq, Catia Grisa, Stéphane Guéneau, Paulo Niederle, 2022-02-25 Solving the problem of hunger and malnutrition, producing and guaranteeing access to healthy food, preserving the environment, valuing local cultures and ensuring citizen participation are some of the challenges that permeate the dynamics of food systems. From different scales and perspectives of analysis, the book addresses the role of Latin American public policies and actions in the configuration of healthy and sustainable food systems.

The Gentiles and the Gentile Mission in Luke-Acts Stephen G. Wilson, 2005-08-22 Dr Wilson examines Jesus' attitude to Gentiles and concludes that not only did he fail to anticipate a historical Gentile mission, but that his eschatological expectations logically disallowed it.

The Interface of Neurology & Internal Medicine José Biller, 2008 This book is the first comprehensive reference on the interface between neurology and internal medicine. In 171 chapters organized by organ system, the book examines the neurologic manifestations of dozens of medical conditions, the neurologic effects of drugs, organ transplantation, and other treatments, and the medical comorbidities or complications—iatrogenic or otherwise—that neurologists must diagnose and treat in patients with neurologic disease. Most chapters are co-authored by a neurologist and a non-neurologic specialist. Each chapter presents information in an accessible format and includes a case vignette and the authors' recommendations for the case. A companion Website provides a multiple-choice question for each chapter and the fully searchable text, with case vignettes and recommendations linked.

Plant Proteomic Research 4.0 Sixue Chen, Setsuko Komatsu, 2022-01-21 As an important tool of systems biology, proteomics has enabled a deep understanding of different plant processes and functions. Complemented with genomic data, computational tools, and improved sample preparation strategies, proteomics has an unprecedented opportunity to characterize plant proteoforms in high spatial and temporal resolution. This special issue of *Plant Proteomic Research 4.0* captures the recent advancements in proteomics and addresses the current challenges of plant stress response and resilience in the ever-changing climate. It contains 12 articles, including three reviews and nine original research articles. The three reviews deal with pollen phosphoproteomics, starch

biosynthesis-related proteins and posttranslational modifications (PTMs) in rice developing seeds, and PTMs of waxy proteins in rice grain. The nine research articles include three related to temperature, two on water stress, two on salt stress, one on fungal pathogen, and the last one on field-grown potato apoplast proteome. The articles reflect the current frontiers of plant proteomics, focusing on themes of environmental stresses, proteoforms/PTMs, crop species, and new development in data-independent acquisition mass spectrometry. They provide readers insights into current technologies, their utility in understanding plant growth and resilience, as well as directions of proteomics in the frontiers of systems biology and synthetic biology.

The Theory of the Marketing Firm Gordon R. Foxall, 2021-11-12 The marketing firm is that business organisation which responds to the imperatives of consumer-orientation. Its style of management is marked by its adherence to the criteria of goal separation, participation in marketing transactions, entrepreneurial sovereignty and reciprocal entrepreneurial management, all of which are explored in this pioneering book. It assumes the proposition, uncontroversial enough to marketing academics and students, that contemporary firms can survive and prosper – achieve their financial goal, be it the maximization of profit or sales or growth – only if they respond appropriately to those imperatives: specifically, the forces that promote consumer discretion and consumer sophistication. Surprisingly, however, theories of the firm, based on economics, strategic management or behavioural science, show scant recognition of this observation which is abundantly clear from the most elementary treatment of marketing management. Renowned scholar Gordon R. Foxall argues that this proposition should form the starting point of a theory of the firm and explores its implications for marketing theory in the light of the findings of consumer behaviour analysis and research on the marketing firm. Hence, while pursuing a competence theory of the marketing firm based on the idealised implications of the imperatives of consumer-orientation, the book rests its conception on a groundwork of empirical evidence on consumer behaviour and corporate action.

Symmetric and Asymmetric Distributions Emilio Gómez Déniz, 2021-01-21 In recent years, the advances and abilities of computer software have substantially increased the number of scientific publications that seek to introduce new probabilistic modelling frameworks, including continuous and discrete approaches, and univariate and multivariate models. Many of these theoretical and applied statistical works are related to distributions that try to break the symmetry of the normal distribution and other similar symmetric models, mainly using Azzalini's scheme. This strategy uses a symmetric distribution as a baseline case, then an extra parameter is added to the parent model to control the skewness of the new family of probability distributions. The most widespread and popular model is the one based on the normal distribution that produces the skewed normal distribution. In this Special Issue on symmetric and asymmetric distributions, works related to this topic are presented, as well as theoretical and applied proposals that have connections with and implications for this topic. Immediate applications of this line of work include different scenarios such as economics, environmental sciences, biometrics, engineering, health, etc. This Special Issue comprises nine works that follow this methodology derived using a simple process while retaining the rigor that the subject deserves. Readers of this Issue will surely find future lines of work that will enable them to achieve fruitful research results.

The Word Isaac Mozeson, 2000 This landmark dictionary proves that English words can be traced back to the universal, original language, Biblical Hebrew. Genesis II supports a 'Mother Tongue' thesis, and the Bible also claims that Adam named the animals. This may seem difficult to accept, but then why do the translations of the following animals' names: Skunk, Gopher, Giraffe and Horse actually have corresponding meanings in Biblical Hebrew, such as: Stinker, Digger, Neck and Plower? The book

features overwhelming data suggesting that the roots of all human words are universal, and that words have related synonyms and antonyms that must have been intelligently designed (perhaps by the designer of life himself!) The current hypothesis that language evolved from grunting ape-men may seem like the flat earth theory after reading this book. The 22,000 English-Hebrew links provide surprising evidence, and open new worlds of understanding, once we consider that all of these similar words could not be coincidences.

United States Army Counterinsurgency and Contingency Operations Doctrine, 1860-1941 Andrew J. Birtle, 1998-04 NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT--OVERSTOCK SALE -- Significantly reduced list price U.S. Army Counterinsurgency and Contingency Operations Doctrine, 1860-1941, is the first of a two-volume study on the U.S. Army's experience in small war situations and the development of low-intensity conflict doctrine. Focusing on the suppression of insurgent or other irregular forces during overseas constabulary and contingency operations from the Civil War years up to America's entry into World War II, Andrew J. Birtle has filled an important omission in military historiography by writing about the underlying theories, concepts, and methods employed in the conduct of myriad unconventional missions with soldiers serving as governors, constables, judges, diplomats, explorers, colonizers, educators, administrators, and engineers. Even though official, codified, written doctrine for counterguerrilla, pacification, and nation-building activities prior to World War II has long been viewed as nonexistent, Birtle uncovers through his meticulous research an evidentiary thread of continuity in the Army's performance and thus maintains that some of the central principles governing such operations were indeed incorporated into official Army doctrinal literature. The events discussed unquestionably occurred long ago, but many of the issues raised by Birtle have enduring relevance for today's Army. People, places, and events may change, yet the fundamental questions involved in suppressing insurrections, fighting irregulars, administering civilian populations, and conducting foreign intervention remain surprisingly constant in this unpredictable world of ethnic tensions and turmoil. By studying how soldiers dealt with these complex issues in the past, Birtle's well-written account offers valuable insights to guide current and future soldiers when called upon to conduct similar operations. Military strategists, historians, and civilians interested in America's early history may find this resource appealing and offer a better understanding of Army doctrine from a historical perspective. Neurologic Differential Diagnosis Alan B. Ettinger, Deborah M. Weisbrot, 2014-04-17 There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: I can't give you a differential diagnosis. If

you wish I will give you a list of wrong diagnoses followed by the right diagnosis. Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system--
