Architecture against Democracy Reinhold Martin,Claire Zimmerman,2024-04-30 Examining architecture's foundational role in the repression of democracy Reinhold Martin and Claire Zimmerman bring together essays from an array of scholars exploring the troubled relationship between architecture and antidemocratic politics. Comprising detailed case studies throughout the world spanning from the early nineteenth century to the present, *Architecture against Democracy* analyzes crucial occasions when the built environment has been harnessed as an instrument of authoritarian power. Alongside chapters focusing on paradigmatic episodes from twentieth-century German and Italian fascism, the contributors examine historic and contemporary events and subjects that are organized thematically, including the founding of the Smithsonian Institution, Ellis Island infrastructure, the aftermath of the Paris Commune, Cold War West Germany and Iraq, Frank Lloyd Wright's domestic architecture, and Istanbul's Taksim Square. Through the range and depth of these accounts, *Architecture against Democracy* presents a selective overview of antidemocratic processes as they unfold in the built environment throughout Western modernity, offering an architectural history of the recent "nationalist international." As new forms of nationalism and authoritarian rule proliferate across the globe, this timely collection offers fresh understandings of the role of architecture in the opposition to democracy. The Architect ,1925

The Globalisation of Modern Architecture Robert Adam,2012-04-25 Taking the break-up of the Soviet Union and the

entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990. Based on the principle that design unavoidably follows social change, politics and economics, this analysis casts a new light on recent architecture. Starting with the lead up to events in the 1990s, links are established between the global dominance of the North Atlantic economies, architectural style and a dramatic increase in international architectural practice. The widely-observed homogeneity of the global consumer economy is examined in relation to branding, tourism and international competition between cities, and parallels are drawn with universal architectural and urban types, iconic architecture and the rise of the star architect. Contrasting pressures to maintain differences are identified in the break-up of nation states, identity politics, targeted marketing and environmentalism, and these are related to attempts to reinforce local identity through architecture and urban design. Using social, political and economic change as a guide to new directions in architecture and urban design, the book ends by tracing the changes in global power revealed by the 2008 Western financial crash and its immediate impact on the built environment. By comparing past patterns of cultural influence, the book speculates on how architecture and urban design may come to reflect wider global trends.

Constructing a Bridge Eda Kranakis, 1997 A historical look at styles of technological research and design. If it

is true, as Tocqueville suggested, that social and class systems shape technology, research, and knowledge, then the effects should be visible both at the individual level and at the level of technical institutions and local environments. That is the central issue addressed in *Constructing a Bridge*, a tale of two cultures that investigates how national traditions shape technological communities and their institutions and become embedded in everyday engineering practice. Eda Kranakis first examines these issues in the work of two suspension bridge designers of the early nineteenth century: the American inventor James Finley and the French engineer Claude-Louis-Marie-Henri Navier. Finley--who was oriented toward the needs of rural, frontier communities--designed a bridge that could be easily reproduced and constructed by carpenters and blacksmiths. Navier--whose professional training and career reflected a tradition of monumental architecture and had linked him closely to the Parisian scientific community--designed an elegant, costly, and technically sophisticated structure to be built in an elite district of Paris. Charting the careers of these two technologists and tracing the stories of their bridges, Kranakis reveals how local environments can shape design goals, research practices, and design-to-construction processes. Kranakis then offers a broader look at the technological communities and institutions of nineteenth-century France and America and at their ties to technological practice. She shows how conditions that led to Finley's and Navier's distinct designs also fostered different systems of technical education as well as distinct ideologies and traditions of engineering research. The result of this two-tiered, comparative approach is a reorientation of a historiographic tradition initiated by Tocqueville (and explored more recently by Eugene Ferguson, John Kasson, and others) toward a finer-grained analysis of institutional and local environments as mediators between national traditions and individual styles of technological research and design.

Monumentality in Etruscan and Early Roman Architecture Michael Thomas, Gretchen E. Meyers, 2012-11-01 Every society builds, and many, if not all, utilize architectural structures as markers to define place, patron, or experience. Often we consider these architectural markers as monuments or monumental buildings. Ancient Rome, in particular, is a society recognized for the monumentality of its buildings. While few would deny that the term monumental is appropriate for ancient Roman architecture, the nature of this characterization and its development in pre-Roman Italy is rarely considered carefully. What is monumental about Etruscan and early Roman architecture? Delving into the crucial period before the zenith of Imperial Roman building, *Monumentality in Etruscan and Early Roman Architecture* addresses such questions as, What factors drove the emergence of scale as a defining element of ancient Italian architecture? and How did monumentality arise as a key feature of Roman architecture? Contributors Elizabeth Colantoni, Anthony Tuck, Nancy A. Winter, P. Gregory Warden, John N. Hopkins, Penelope J. E. Davies, and Ingrid Edlund-Berry reflect on the ways in which ancient Etruscans and Romans utilized the concepts of commemoration, durability, and visibility to achieve monumentality. The editors' preface and introduction underscore the notion of architectural evolution toward monumentality as being connected to the changing social and political strategies of the ruling elites. By also considering technical components, this collection

emphasizes the development and the ideological significance of Etruscan and early Roman monumentality from a variety of viewpoints and disciplines. The result is a broad range of interpretations celebrating both ancient and modern perspectives.

Workmanship Klaus-Dieter Weiss, 2012-12-13 today, the name RKW Architektur + Städtebau evokes two hundred architects whose work never fails to convince. The reason does not lie in the narrowly defined architectural language of individual leaders of the firm. More than in any other firm, the various teams are given generous latitude for independent initiative. Thus, this documentation of the last ten years, with cross - references to the development of this unique partnership since 1950, doesn't just present sixty - five structures and projects from an internationally sought - after firm. On the contrary, in its search for the secret of the firm's success, it looks behind the scenes in numerous interviews and essays. The works considered range from the research facilities for AUDI, the new sciences campus of RWTH Aachen University, and the corporate headquarters of Vodafone, Debitel, and Arag to urban revitalization projects, residential buildings, schools, sports halls, railroad stations, city halls, banks, urban office buildings and shopping centers, and the stadium for the 2012 European Soccer Championship in Gdansk.

Vernacular Architecture in the Pre-Columbian Americas Christina Halperin, Lauren Schwartz, 2016-09-13 Vernacular Architecture in the Pre-Columbian Americas reveals the dynamism of the ancient past, where social relations and long-term history were created posthole by posthole, brick by brick. This collection shifts attention away from the elite and monumental architectural traditions of the region to instead investigate the creativity, subtlety and variability of common architecture and the people who built and dwelled in them. At the heart of this study of vernacular architecture is an emphasis on ordinary people and their built environments, and how these everyday spaces were pivotal in the making and meaning of social and cultural dynamics. Providing a deeper and more nuanced temporal perspective of common buildings in the Americas, the editors have deftly framed a study that highlights sociocultural diversity while at the same time facilitating broader comparative conversations around the theme of vernacular architecture. With diverse case studies covering a broad range of periods and regions, Vernacular Architecture in the Pre-Columbian Americas is an important addition to the growing body of scholarship on the indigenous architecture of the Americas and is a key contribution to our archaeological understandings of past built environments.

Equality by Design Szonja Szelényi, 1999-01-01 Social mobility is a classic topic in sociology, and Hungary presents an interesting case study for a number of reasons. The communist regime that took power after World War II had the proclaimed goal of eliminating the abusive inequalities of the old regime and creating an egalitarian

society; it accordingly introduced numerous measures intended to favor the advancement of people with working-class backgrounds. That to some extent these policies worked cannot be disputed, but over time did they simply replace one privileged class with another? What happened during the communist reform era of the late 1970's and 1980's, when Hungary went much further along the path of decentralizing the economy than any other Eastern bloc country? What happened in the postcommunist era? And what difference did such age-old liabilities as being Jewish or female make? There is as much scholarly debate over how to address these questions in an intellectually rigorous way as there is over the answers to them. This study aims to contribute to the debate by analyzing random samples of both elites and the general population and by carrying out comparisons across presocialist, socialist, and postsocialist society. Its main methodological goal is to explore the implications of carefully distinguishing between the effects of socialist reform on the distribution of inequality from its effects on the underlying rules by which inequality is allocated.

The Petrine Revolution in Russian Architecture James Cracraft, 1988-10-26 In this highly original book James Cracraft provides a major case study of the cultural revolution in Russia initiated by Peter the Great, tsar and first emperor (1682-1725). He recounts in fascinating detail how modern standards of architecture supplanted traditional norms in Russia following a massive injection of European expertise and indicates how, thereby, the modern Russian built world came into being. The first comprehensive study of the Petrine revolution in Russian architecture to be published in any language, the book includes nearly 250 illustrations, many of them original photographs appearing here for the first time.

Architects Thomas Yarrow, 2019-07-15 What is creativity? What is the relationship between work life and personal life? How is it possible to live truthfully in a world of contradiction and compromise? These deep and deeply personal questions spring to the fore in Thomas Yarrow's vivid exploration of the life of architects. Yarrow takes us inside the world of architects, showing us the anxiety, exhilaration, hope, idealism, friendship, conflict, and the personal commitments that feed these acts of creativity. Architects rethinks creativity, demonstrating how it happens in everyday practice. It highlights how the pursuit of good architecture, relates to the pursuit of a good life in intimate and individually specific ways. And it reveals the surprising and routine social negotiations through which designs and buildings are actually made.

Behind the Postmodern Facade Magali Sarfatti Larson, 2018-08-14 Magali Larson's comprehensive study explores how architecture happens and what has become of the profession in the postmodern era. Drawing from extensive interviews with pivotal architects—from Philip Johnson, who was among the first to introduce European modernism to America, to Peter Eisenman, identified with a new deconstructionist style—she analyzes the complex tensions that exist between economic interest, professional status, and architectural product. She investigates the symbolic awards and recognition accorded by prestigious journals and panels, exposing the inner workings of a profession in

a precarious social position. Larson captures the struggles around status, place, and power as architects seek to redefine their very purpose in contemporary America. The author's novel approach in synthesizing sociological research and theory proposes nothing less than a new cultural history of architecture. This is a ground-breaking contribution to the study of culture and the sociology of knowledge, as well as to architectural and urban history.
