Groundwork Diana Balmori, Joel Sanders, 2011-09-27 The current environmental crisis calls for a unified practice of landscape and architecture that would allow buildings and landscapes to perform symbiotically to heal the environment. Over the past ten years, a diverse group of architects, landscape architects, and artists have undertaken groundbreaking projects that propose an integration of landscape and architecture, dissolving traditional distinctions between building and environment. Groundwork: Between Landscape and Architecture examines twenty-five projects, on an international scale, that consider landscape and architecture as true reciprocal entities. Groundwork divides the projects into three design directions: Topography, Ecology, and Biocomputation. Topographic designers create projects that manipulate the ground to merge building and landscape as in Cairo Expo City in Egypt (Zaha Hadid Architects), Island City Central Park Grin Grin in Fukuoka, Japan (Toyo Ito & Associates) and the City of Culture of Galicia in Santiago de Compostela, Spain (Eisenman Architects). Ecologic designers develop environments that address issues such as energy climate and remediation, such as I'm Lost In Paris in France (R&Sie(n)), Turistroute in Eggum, Norway (Snøhetta) and Parque Atlántico in Santander, Cantabria, Spain (Batlle i Roig Arquitectes). Biocomputation designers use digital technologies to align biology and design in projects such as the Grotto Concept (Aranda/Lasch), North Side Copse House in West Sussex, England (EcoLogicStudio) and Local Code: Real Estates (Nicolas de Monchaux.) What these projects all have in common is a desire to pay attention and homage to the liminal space where indoors and outdoors meet. The critical connection between natural and synthetic, exterior and interior space, paves the way toward a more inclusive—and indeed more alive—conceptualization of the physical world.

Midwestern Landscape Architecture William H. Tishler, 2000 This richly illustrated collection profiles the bold innovators in landscape architecture who, around the turn of the twentieth century,

ventured into the nation's heartland to develop a new style of design celebrating the native midwestern landscape. The pioneers of landscape architecture in the Midwest are responsible for creating some of the most recognizable parks, cemeteries, recreation areas, and other public gathering places in the region. *Midwestern Landscape Architecture* includes essays on Adolph Strauch, who introduced a new concept of visually integrated landscape treatment in Cincinnati's Spring Grove Cemetery; William Le Baron Jenney, designer of Chicago's diverse West Parks; and Jens Jensen, who created the American Garden in Union Park in Chicago (a celebration of native flora) and founder of The Clearing, a unique school of the arts and humanities in Wisconsin. Other major figures include Frederick Law Olmsted Sr., co-designer of New York's Central Park, whose work in the Midwest included the layout of the 1893 World's Columbian Exposition, and Ossian Cole Simonds, who helped reconcile the formal approach of the City Beautiful movement with the naturalism of the Prairie School in urban park design. This volume also details the contributions of crusaders for ecological awareness and an appreciation of the region's natural heritage. These include horticultural writer Wilhelm Miller, who spread the ideals of the Prairie style, and Genevieve Gillette, a landscape architect and conservationist whose preservation efforts led to the establishment of numerous Michigan state parks and wilderness areas. *Midwestern Landscape Architecture* fosters a better understanding of how landscape design took shape in the Midwest and how the land itself inspired new solutions to enhance its understated beauty. Despite Olmsted's assessment of the Illinois prairie as one of the most tiresome landscapes that I ever met with, the Midwest has amassed an important legacy of landscape design that continues to influence how people interact with their environment in the heartland.

Landscape Architecture Alejandro Bahamón, 2006 Over the past decade, incorporating water features into the architectural landscape has become a prevailing theme. As a result, there are hundreds of noteworthy installations worldwide on a public level that document the drama and beauty that water can bring to a landscape design. Far beyond the simple central fountain, landscape designers are bringing innovative and startling creativity to their landscapes using water as a central feature. This book presents work from some of the best designers in this area worldwide, and presents all the details behind the most interesting and dynamic water features being created. This stunning collection, which includes plans, drawings, and beautiful photographs, will inspire and inform both planners and designers on the possibilities for incorporating water into landscape design.
