

Arduino Fan Control

Mark Steyvers

Temperature Control DC Fan Mohit Mishra,Vikash Kumar,Sattabratta Das,2018-10-07 This circuit constructed with Arduino uno board as a main part and LM35 as a temperature sensor. The output from sensor is directly connected with analog input A0 pin of Arduino board, and the LED1 is connected with digital pin D8, the output is taken from the D11 pin of arduino, here you can choose any digital pin with PWM function as a output pin, remember to make those changes in arduino program code, here the code given based on D11 pin as a output. Whenever the temperature sensor detects the changes in temperature outside the Arduino varies the PWM output at D11 pin hence the speed of fan varies, here the SL100 transistor acts as a switching transistor.

Artificial Intelligence and Heuristics for Smart Energy Efficiency in Smart Cities Mustapha Hatti,2021-11-24 This book emphasizes the role of micro-grid systems and connected networks for the strategic storage of energy through the use of information and communication techniques, big data, the cloud, and meta-heuristics to support the greed for artificial intelligence techniques in data and the implementation of global strategies to meet the challenges of the city in the broad sense. The

intelligent management of renewable energy in the context of the energy transition requires the use of techniques and tools based on artificial intelligence (AI) to overcome the challenges of the intermittence of resources and the cost of energy. The advent of the smart city makes an increased call for the integration of artificial intelligence and heuristics to meet the challenge of the increasing migration of populations to the city, in order to ensure food, energy, and environmental security of the citizen of the city and his well-being. This book is intended for policymakers, academics, practitioners, and students. Several real cases are exposed throughout the book to illustrate the concepts and methods of the networks and systems presented. This book proposes the development of new technological innovations—mainly ICT—the concept of “Smart City” appears as a means of achieving more efficient and sustainable cities. The overall goal of the book is to develop a comprehensive framework to help public and private stakeholders make informed decisions on smart city investment strategies and develop skills for assessment and prioritization, including resolution of difficulties with deployment and reproducibility.
