Effective Scientific Communication Cristina Hanganu-Bresch, Kelleen Flaherty, 2020-07-22 Writing and the sciences are intricately linked. Without writing, science would not exist -- and could not be funded, communicated, replicated, enhanced, or applied. Further, writing helps scientists (and students) understand the science, explain the results of research in a greater context, and develop new ideas. Working from this philosophy, this book primarily addresses undergraduate STEM majors and minors who want or need to improve their scientific writing skills. Grounded in the basics of rhetorical research and scientific writing practices and guided by the authors' experiences in the classroom, this book makes the case that writing is an essential component of science regardless of the stage of the scientific process, and that it is in fact a component of thinking about science itself. Featuring student-centered stories that place each topic in context and suggestions for practice, Hanganu-Bresch and Flaherty arm STEM students with the skills to enhance critical thinking and cultivate good writing habits.

*Management Rewired* Charles S. Jacobs, 2009-05-14 How brain science is transforming the way we manage Why is it so hard for managers to get the results they want? According to the latest brain science, it's because most of what they do produces the opposite of what they expect. Appeals to reason fall short, for our decisions are made emotionally, and logic is at best an after-the-fact justification for what we've already determined to do. That's just one of the many amazing discoveries that explain why management is so challenging. but as Charles Jacobs explains, once we understand the lessons of neuroscience, we're able to create more powerful strategies, inspire people to maximize their potential, and overcome the biggest hurdle to improving business performance-making change stick.

**Autoethnography for Librarians and Information Scientists** Ina

Fourie, 2021-06-25 Autoethnography for Librarians and Information Scientists illustrates that autoethnography is a rich qualitative research method that can enhance understanding of one's own work experiences, whilst also facilitating the design of tailored experiences for a variety of audiences. Starting with the position that librarians and information scientists require deep insight into people's experiences, needs and information behaviour in

order to design appropriate services and information interventions, this book shows that using only conventional methods, such as questionnaires and focus groups, is insufficient. Arguing that autoethnography can provide unique insights into users' cultural experiences and needs, contributors to this volume introduce the reader to different types of autoethnography.

Highlighting common challenges and clarifying how autoethnography can be combined with other research methods, this book will empower librarians and information scientists to conceptualise topics for autoethnographic research, whilst also ensuring that they adhere to strict ethical guidelines. Chapters within the volume also demonstrate how to produce autoethnographic writing and stress the need to analyse autoethnographies produced by others.

Autoethnography for Librarians and Information Scientists is essential reading for any librarian, information scientist or student looking to deepen their understanding of their own experiences. It will be particularly useful to those engaged in the study of service provision, user studies and information behaviour.

**We Alone** David Western, 2020-11-24 A thoughtful exploration of how humans have endangered the Earth but can pull it back from the brink, as told by a renowned conservationist This personal and thoughtful book by renowned Kenya conservationist David Western traces our global conquest from Maasai herders battling droughts in Africa to the technological frontiers of California. Western draws on a half century of research in the savannas and his own life's journey to argue that conservation is not a modern invention. The success of all societies past and present lies in conservation practices, breaking biological barriers and learning to live in large cooperative groups able to sustain a healthy environment. Our ecological emancipation from nature enabled us to expand our horizons from conserving food and water for survival to saving whales, elephants, and our cultural heritage. In the Anthropocene, our scientific knowledge and modern sensibilities offer hope for combating global warming and creating a planet able to sustain the wealth of life, but only if we use our unique cultural capacity of cooperation to plan our future.

**Rethinking Durkheim and his Tradition** Warren Schmaus, 2004-06-21 This book offers a reassessment of the work of Emile Durkheim in the context of a French philosophical tradition that had seriously misinterpreted Kant by interpreting his theory of the categories as psychological faculties. Durkheim's sociological theory of the categories, as revealed by Warren Schmaus, is an attempt to provide an alternative way of understanding Kant. For Durkheim the categories are necessary conditions for human society. The concepts of causality, space and time underpin the moral rules and obligations that make society possible. A particularly interesting feature of this book is its transcendence of the distinction between intellectual and social history by placing Durkheim's work in the context of the French educational establishment of the Third Republic. It does this by subjecting student notes and philosophy textbooks to the same sort of critical analysis typically applied only to the classics of philosophy.

**Science In Public** Jane Gregory, Steven Miller, 2000-09-07 Does the general public need to understand science? And if so, is it scientists' responsibility to communicate? Critics have argued that, despite the huge

strides made in technology, we live in a scientifically illiterate society-- one that thinks about the world and makes important decisions without taking scientific knowledge into account. But is the solution to this illiteracy to deluge the layman with scientific information? Or does science news need to be focused around specific issues and organized into stories that are meaningful and relevant to people's lives? In this unprecedented, comprehensive look at a new field, Jane Gregory and Steve Miller point the way to a more effective public understanding of science in the years ahead.

*Scientism: Science, Ethics and Religion* Mikael Stenmark, 2020-10-28 This title was first published in 20/11/2001: The intellectual and practical successes of science have led some scientists to think that there are no real limits to the competence of science, and no limits to what can be achieved in the name of science. This view (and similar views) have been called Scientism. In this book, scientists' views about science and its relationship to knowledge, ethics and religion are subjected to critical scrutiny. A number of natural scientists have advocated Scientism in one form or another - Francis Crick, Richard Dawkins, Carl Sagan, and Edward O. Wilson - and their impact inside and outside the sciences is considered. Clarifying what Scientism is, this book proceeds to evaluate its key claims, expounded in questions such as: is it the case that science can tell us everything there is to know about reality? Can science tell us how we morally ought to live and what the meaning of life is? Can science in fact be our new religion? Ought we become science believers? The author addresses these and similar issues, concluding that Scientism is not really science but disguised materialism or naturalism; its advocates fail to see this, not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra-scientific or philosophical beliefs

**Spotlight on Current Events** David E. Newton, 2019-04-10 Comprising essays on a variety of topics such as immigration, gun control, abortion, race relations, the environment, and gender, and curated by a veteran scholar, this collection gives readers a go-to resource on multiple contemporary world issues. This collection of perspective essays explores a variety of controversial topics, specifically current events and issues such as free speech, school violence, green energy, substance abuse, abortion, gun control, immigration, and more. A general introduction contextualizes the book in contemporary American discourse and shows why the essays that follow are important. Each chapter provides readers with a selection of persuasive and expository essays that they can cite in papers. Each chapter also has individual introductions, explaining how and why the essays were collected together and curated. Readers of this volume will come away with an understanding of the key points of a variety of important perspectives. In a time when the country is so thoroughly polarized, it is vital to give voice to stakeholders on both sides of the proverbial aisle. This book will be a solid resource for libraries, as readers can explore one or more topics in one easy-to-understand volume.

Science and Risk Regulation in International Law Jacqueline Peel, 2010-11-04 The regulation of risk is a preoccupation of contemporary global society and an increasingly important part of international law in areas ranging from environmental protection to international trade. This book examines a key aspect of international risk regulation - the way in which science and technical expertise are used in reaching decisions about how to assess and

manage global risks. An interdisciplinary analysis is employed to illuminate how science has been used in international legal processes and global institutions such as the World Trade Organization. Case studies of risk regulation in international law are drawn from diverse fields including environmental treaty law, international trade law, food safety regulation and standard-setting, biosafety and chemicals regulation. The book also addresses the important question of the most appropriate balance between science and non-scientific inputs in different areas of international risk regulation.
