The second edition has been updated to include a new chapter on the use of biomarkers to aid in patient selection and timing, extensive revisions on terminology and nomenclature to match current standards, and the most up-to-date information on newly developed CRRT machines.

Preterm Birth Institute of Medicine, Board on Health Sciences Policy, Committee on Understanding Premature Birth and Assuring Healthy Outcomes, 2007-05-23 The increasing prevalence of preterm birth in the United States is a complex public health problem that requires multifaceted solutions. Preterm birth is a cluster of problems with a set of overlapping factors of influence. Its causes may include individual-level behavioral and psychosocial factors, sociodemographic and neighborhood characteristics, environmental exposure, medical conditions, infertility treatments, and biological factors. Many of these factors co-occur, particularly in those who are socioeconomically disadvantaged or who are members of racial and ethnic minority groups. While advances in perinatal and neonatal care have improved survival for preterm infants, those infants who do survive have a greater risk than infants born at term for developmental disabilities, health problems, and poor growth. The birth of a preterm infant can also bring considerable emotional and economic costs to families and have implications for public-sector services, such as health insurance, educational, and other social support systems. Preterm Birth assesses the problem with respect to both its causes and outcomes. This book addresses the need for research involving clinical, basic, behavioral, and social science disciplines. By defining and addressing the health and economic consequences of premature birth, this book will be of particular interest to health care professionals, public health officials, policy makers, professional associations and clinical, basic, behavioral, and social science researchers.

**Reproductive Surgery in Assisted Conception** Mostafa Metwally, Tin-Chiu Li, 2015-04-20 To many patients and indeed health care professionals, IVF is the ultimate treatment for infertility. However in many cases IVF is not feasible and may not be indicated. IVF remains a largely inefficient procedure that often does not succeed in achieving a pregnancy. There remains a strong place for other fertility interventions, many of them surgical in nature. Surgical interventions can be used as a stand-alone fertility treatment or as an adjuvant treatment used in conjunction with other assisted conception treatments. Despite the continuing use of such techniques by reproductive surgeons, there remains a clear gap in the literature regarding resources to supplement formal training in the field or to provide a reference for established and aspiring practitioners.

**Biological Controls for Preventing Food Deterioration** Neeta Sharma, 2014-09-22 Various biotic factors cause diseases in crops, which result in food losses. Historically pesticide development has been instructive to us in terms of the benefits derived as well as the hazards that accompany their indiscriminate use. The application of fertilizers and pesticides to crops has become a norm in agricultural production, but this has led to resurgence in pests as they have developed resistance to such chemicals. Biological control of plant pests and pathogens is part of the solution to this problem. This is an area that continues to inspire research and development. It is also the foundation on which sustainable, non-polluting pest control for tomorrow's farms must be built. Biological Controls for Preventing Food Deterioration provides readers with options of non-chemical, eco-friendly, environmentally safe natural alternatives to prevent food from spoilage at pre- and postharvest stages. It covers the principles behind these techniques and their implementation. By integrating theory and practice, this book discusses the potential and associated problems in the development of non-chemical alternatives to protect food and addresses the common hurdles that need to be overcome to enable commercialization and registration of natural products for combating diseases. Focussing on plant foods, this timely book is unique in scope as it offers an international perspective on food deterioration caused by bacterial, fungal, viral, and mycotoxin contamination. It brings together highly respected scientists from differing yet complementary disciplines in one unified work that is important reading for food safety professionals, researchers and students.
