Genetics of Human Infertility P.H. Vogt,2017-09-12 Infertility affects more than one in ten couples worldwide and is related to highly heterogeneous pathologies sometimes only discernible in the germ line. Its complex etiology often, but not always, includes genetic factors besides anatomical defects, immunological interference, and environmental aspects. Nearly 30% of infertility cases are probably caused only by genetic defects. Thereby experimental animal knockout models convincingly show that infertility can be caused by single or multiple gene defects. Translating those basic research findings into clinical studies is challenging, leaving genetic causes for the vast majority of infertility patients unexplained. Nevertheless, a large number of candidate genes have been revealed by sophisticated molecular methods. This book provides a comprehensive overview on the subject of infertility written by the leading authorities in this field. It covers topics including basic biological, cytological, and molecular studies, as well as common and uncommon syndromes. It is a must-read for human geneticists, endocrinologists, epidemiologists, zoologists, and counsellors in human genetics, infertility, and assisted reproduction.

Products and Services Igor Fuerstner,2010-11-02 Today's global economy offers more opportunities, but is also more complex and competitive than ever before. This fact leads to a wide range of research activity in different fields of interest, especially in the so-called high-tech sectors. This book is a result of widespread research and development activity from many researchers worldwide, covering the aspects of development activities in general, as well as various aspects of the practical application of knowledge.

African Doctorates in Mathematics ,2007 This volume presents a catalogue of over 2000 doctoral theses by Africans in all fields of mathematics, including applied mathematics, mathematics education and history of mathematics. The introduction contains information about distribution by country, institutions, period, and by gender, about mathematical density, and mobility of mathematicians. Several appendices are included (female doctorate holders, doctorates in mathematics education, doctorates awarded by African universities to non-Africans, doctoral theses by non-Africans about mathematics in Africa, activities of African mathematicians at the service of their communities). Paulus Gerdes compiled the information in his capacity of Chairman of the African Mathematical Union Commission for the History of Mathematics in Africa (AMUCHMA). The book contains a preface by Mohamed Hassan, President of the African Academy of Sciences (AAS) and Executive Director of the Academy of Sciences for the Developing World (TWAS). (383 pp.)

Rare-Earths and Actinides in High Energy Spectroscopy Christiane Bonnelle,Nissan Spector,2015-12-22 This unique monograph covers recent theoretical and experimental results on the complex character of f electrons in materials containing lanthanides (rare earths) or actinides, such as alpha-cerium and delta-plutonium. It answers the urgent need for a general presentation of the body of experimental and theoretical results presently available in this challenging domain. Some of the fast developing applications of lanthanide and actinide materials are mentioned. Materials containing atoms with an open f shell have electronic and crystalline properties that are controlled by the localized or delocalized character of the f electrons. This book gives a theoretical discussion of the various spectroscopic methods that shed light on the character of the f electrons and on the connection between their localization and the properties of these materials. Part 1 covers the characteristics of the f electrons in atoms and solids and includes a discussion of the properties of lanthanides and actinides in connection with the f electrons. Part 2 describes the various spectroscopic methods that are used to establish the electronic distributions and energies of the states. Examples involve the determination of f electron distributions by high energy spectroscopy methods with separate treatment of the valence and core electrons. Part 3 concentrates on the theoretical treatment of electronic transitions involving f electrons and simulations of the lanthanide spectra, including comparison with the available experimental data. Part 4 discusses the localized or delocalized character of the f electrons in actinides and their compounds, including comparison (analogies & differences) between the 4f and 5f electron materials. This monograph should be of great value for researchers, academics and engineers working in the fields of high energy spectroscopy, electronic and nuclear science and technology, as well as materials involving rare earths and radio-elements.

Place Event Marketing in the Asia Pacific Region Waldemar Cudny, 2021-08-19 This book explores the fascinating phenomenon of place event marketing in the Asia Pacific region. It examines procedures in the promotion and branding of places that use events to shape their identities. It considers how events are used in forming a branded image of a place and disseminate information about it. This innovative book offers theoretical insights of the opportunities and challenges related to place event marketing. With contributions from leading thinkers in the field, chapters also draw on empirical examples to showcase a variety of events across the Asia Pacific, such as MICE, sporting events, festivals, and religious and cultural celebrations. The book explores the importance of such events for the socio-economic development of urban regions. Today, the Asia Pacific is one of the world's fastest developing regions and its rising economic power is accompanied by the growing importance of the tourism and event sector. The book is a unique study relating to a very exceptional region of the world. The role of events in tourism development and the rise of the region's soft power is presented through carefully selected examples of cities from different countries. The book concludes with commentary on the future directions for research in this area. Written in an accessible style, this book will be of great interest to students, scholars, and practitioners working in events studies, urban studies, tourism, place branding and promotion, business and management studies, geography, sociology, and sport and leisure studies.

Ferromagnetic Materials E. P. Wohlfarth, K. H. J. Buschow, 1988 Volume 20 of the Handbook of Magnetic Materials, as the preceding volumes, has a dual purpose. As a textbook it is intended to help those who wish to be introduced to a given topic in the field of magnetism without the need to read the vast amount of literature published. As a work of reference it is intended for scientists active in magnetism research. To this dual purpose, Volume 20 is composed of topical review articles written by leading authorities. In each of these articles an extensive description is given in graphical as well as in tabular form, much emphasis being placed on the discussion of the experimental material in the framework of physics, chemistry and material science. It provides readers with novel trends and achievements in magnetism--Publisher's note.

Gastroesophageal Reflux in Children Yvan Vandenplas, 2022-06-23 This extensively revised second edition of this essential work provides a comprehensive overview of Gastroesophageal Reflux (GER) in children. It contains detailed insight into the epidemiology and pathophysiology of the condition. Relevant diagnostic methods and treatment techniques are also covered. Heavily revised chapters discuss issues associated with GER in special

patient populations and current approaches to GER diagnosis and management. New chapters cover relevant aspects of the microbiome, how nutrition can be key to successful treatment and the adverse effects of the latest therapeutic drugs presently available. Colic in infants, and differential diagnoses in eosinophilic esophagitis are also described. The first part of the book is dedicated to introducing the condition, discussing epidemiology, symptoms and diagnosis. This is followed by addressing issues of the condition encountered in special patient populations such as in preterm infants, apnea, neurologic patients and cystic fibrosis, among others. The final part of the book is dedicated to therapeutic approaches from medication to surgery and alternative approaches such as complementary medicine and hypnotherapy. The approaches and challenges in endoscopy are also detailed. Gastroesophageal Reflux in Children, Second Edition is edited by a leading world expert in the topic and written by a global team of authors from a range of associated disciplines, making the work a critical resource for pediatricians, gastroenterologists to pulmonologists, otolaryngologists and neurologists.
