Evaluating Learning Environments Wesley Imms,Benjamin Cleveland,Kenn Fisher,2016-09-27 The recent trend in innovative school design has provided exciting places to both learn and teach. New generation learning environments have encouraged educators to unleash responsive pedagogies previously hindered by traditional classrooms, and has allowed students to engage in a variety of learning experiences well beyond the traditional ‘chalk and talk’ common in many schools. These spaces have made cross-disciplinary instruction, collaborative learning, individualised curriculum, ubiquitous technologies, and specialised equipment more accessible than ever before. The quality of occupation of such spaces has also been encouraging. Many learning spaces now resemble places of collegiality, intellectual intrigue and comfort, as opposed to the restrictive and monotonous classrooms many of us experienced in years past. These successes, however, have generated a very real problem. Do these new generation learning environments actually work – and if so, in what ways? Are they leading to the sorts of improved experiences and learning outcomes for students they promise? This book describes strategies for assessing what is actually working. Drawing on the best thinking from our best minds – doctoral students tackling the challenge of isolating space as a variable within the phenomenon of contemporary schooling – Evaluating Learning Environments draws together thirteen approaches to learning environment evaluation that capture the latest thinking in terms of emerging issues, methods and knowledge.

Automated Sample Preparation Hans-Joachim Hubschmann,2022-02-22 An essential guide to the proven automated sample preparation process While the measurement step in sample preparation is automated, the sample handling step is manual and all too often open to risk and errors. The manual process is of concern for accessing data quality as well as producing limited reproducibility and comparability. Handbook of Automated Sample Preparation for CG-MS and LC-MS explores the advantages of implementing automated sample preparation during the handling phase for CG-MS and LC-MS. The author, a noted expert on the topic, includes information on the proven workflows that can be put in place for many routine and regulated analytical methods. This book offers a guide to automated workflows for both on-line and off-line sample preparation. This process has proven to deliver consistent and comparable data quality, increased sample amounts, and improved cost efficiency. In addition, the process follows Standard Operation Procedures that are essential for audited laboratories. This important book: Provides the information and tools needed for the implementation of instrumental sample preparation workflows Offers proven and detailed examples that can be adapted in analytical laboratories Shows how automated sample preparation can reduce cost per sample, increase sample amounts, and produce faster results Includes illustrative examples from various fields such as chemistry to food safety and pharmaceuticals Written for personnel in analytical industry, pharmaceutical, and medical laboratories, Handbook of Automated Sample Preparation for CG-MS and LC-MS offers the much-needed tools for implementing the automated sample preparation for analytical laboratories.

Antiseizure Medications Ali A. Asadi-Pooya,Michael R. Sperling,2022 Approximately 10% of the general population will experience at least one seizure within their lifetimes in most Western countries, and even higher rates are observed in developing countries. However, not all individuals go on to develop epilepsy, which is characterized by recurring epileptic seizures. The prevalence of epilepsy is 7.1 cases per 1,000 people (range 4.0 to 8.9) and its incidence is 47.4 cases per 100,000 people per year worldwide (Kotsopoulos et al., 2002; Hirtz et al., 2007). An epileptic seizure is the transient occurrence of signs or symptoms due to abnormal excessive, hypersynchronous firing of neurons in the brain. The practical clinical definition of epilepsy proposed by the International League Against Epilepsy (ILAE) considers epilepsy to be a disease of the brain defined by any of the following conditions: (1) at least two unprovoked (or reflex) seizures occurring >24 hours apart; (2) one unprovoked (or reflex) seizure and a probability of further seizures similar to the general recurrence risk after two unprovoked seizures (at least 60%), occurring over the next 10 years; and (3) diagnosis of an epilepsy syndrome (Fisher et al., 2014). Epilepsy may be due to genetic causes (possessing an inherited trait to have seizures), brain tumors, infections (meningitis or encephalitis), brain trauma, stroke, developmental anomalies (eg, cortical dysplasia), brain malformations (tuberous sclerosis, neurofibromatosis), vascular malformations (arteriovenous malformations), and other causes--

Gender Inequalities in Africa's Mining Policies Francis Onditi, 2022-04-17 This book develops a discursive 'equalitarian' theoretical framework for studying African mining ecosystem issues and policy interventions. The theory of 'equalitarianism' is developed as an alternative to the reductionist approach that has dominated post-colonial debates about the classical jus ad bellum requirements to empower women in development spaces. However, the classical approach narrows the debate down to "women issues," rather than the 'whole-of-society.' As a consequence of this reductionism, women continue to be devalued in the mining sector, characterized by poverty traps, power struggles, and a lack of capacity to engage in large-scale mining (LSM) activities. This book advances principles for a holistic approach, and spells out the implications for women across the mining value chain. Drawing on moral scholarship, the book poses that for women to gain access to strategic spaces in the mining sector, the drive for empowerment must be embedded within 'whole-of-society' principles. This book is of interest to scholars researching gender policy, public policy, political philosophy, conflictology, and human geography. It also offers practitioners a guide for evaluating their policy work on mainstreaming gender in the mining sector, presenting options for financing, forging partnership and planning for an inclusive economic development in Africa, and beyond.

Pharmacoresistance in Epilepsy Luisa L. Rocha, Alberto Lazarowski, Esper A. Cavalheiro, 2023-08-29 This new edition of *Pharmacoresistance in Epilepsy* addresses all issues relating to drug-resistance in epilepsy, including studies in patients as well in experimental models and presents the basis for an understanding of recent developments in the pathogenesis and treatment of this condition. Important issues associated with drug-resistant epilepsy are reviewed and updated, such as abnormalities in inhibitory mechanisms, neurotoxicity and changes the immune system associated with this disorder, and the development of drug-resistance as consequence of chronic exposure to antiseizure-medications. Considering that a major obstacle is that epilepsy associated with drug-resistance cannot be controlled with the traditional antiseizure medications, specific chapters describe therapeutic strategies to prevent or reduce the progression of the disease with complementary medical therapies, such as transcranial focal stimulation to promote neuroprotection. *Pharmacoresistance in Epilepsy* is a valuable resource for anyone working in the field, whether studying epilepsy in the lab or treating it in an office.

Biologically Active Peptides in Invertebrates Qing Yu, Zhidan Liang, Chuanzi OuYang, Lingjun Li, 2015-10-01 Animal behaviors and emotions are fine-tuned via signal transmission and communication between cells. The nervous system gives instructions and transmits signals to different parts of an organism to produce coordinated activities. Neurons are core components of the nervous system and they use various chemical messengers to communicate with one another. Neuropeptides (NPs), which are small chains of amino acids, represent the largest class of signaling molecules. Since NPs are directly involved in modulating many physiological processes, such as metabolism, reproduction, learning, memory, and social behaviors--there is a growing interest in

studying their structures, functions, and distributions. This book aims to summarize advances in invertebrate NP studies concerning molecular diversities, distributions, and biological functions. In addition, the emerging mass spectrometric techniques have been discussed extensively as a powerful tool enabling accelerated invertebrate NP studies.

Radio Wave Propagation and Channel Modeling for Earth-Space Systems Athanasios G. Kanatas, Athanasios D. Panagopoulos, 2017-12-19 The accurate design of earth-space systems requires a comprehensive understanding of the various propagation media and phenomena that differ depending on frequencies and types of applications. The choice of the relevant channel models is crucial in the design process and constitutes a key step in performance evaluation and testing of earth-space systems. The subject of this book is built around the two characteristic cases of satellite systems: fixed satellites and mobile satellite systems. Radio Wave Propagation and Channel Modeling for Earth-Space Systems discusses the state of the art in channel modeling and characterization of next-generation fixed multiple-antennas and mobile satellite systems, as well as propagation phenomena and fade mitigation techniques. The frequencies of interest range from 100 MHz to 100 GHz (from VHF to W band), whereas the use of optical free-space communications is envisaged. Examining recent research advances in space-time tropospheric propagation fields and optical satellite communication channel models, the book covers land mobile multiple antennas satellite- issues and relative propagation campaigns and stratospheric channel models for various applications and frequencies. It also presents research and well-accepted satellite community results for land mobile satellite and tropospheric attenuation time-series single link and field synthesizers. The book examines aeronautical communications channel characteristics and modeling, relative radio wave propagation campaigns, and stratospheric channel model for various applications and frequencies. Propagation effects on satellite navigation systems and the corresponding models are also covered.
