Jürgen G. Heinrich, Fritz Aldinger

Computational Aspects of Electric Polarizability Calculations George Maroulis, 2006 Covers such subjects as: Ab initio and Density functional theory calculations of electric polarizability and hyperpolarizability, intermolecular forces, aromaticity, electric properties of solvated molecules, NLO materials, Raman intensities, polarizability of metal and semiconductor clusters, relativistic effects on electric properties, and more.

Aspects of Calculus Gabriel Klambauer, 2012-12-06 This book is intended for students familiar with a beginner's version of differential and integral calculus stressing only manipulation of formulas and who are now looking for a closer study of basic concepts combined with a more creative use of information. The work is primarily aimed at students in mathematics, engineering, and science who find themselves in transition from elementary calculus to rigorous courses in analysis. In addition, this book may also be of interest to those preparing to teach a course in calculus. Instead of exposing the reader to an excess of premature abstractions that so easily can degenerate into pedantry, I felt it more useful to stress instructive and stimulating examples. The book contains numerous worked out examples and many of the exercises are provided with helpful hints or a solution in outline. For further exercises the interested reader may want to consult a problem book by the author entitled *Problems and Propositions in Analysis* (New York: Marcel Dekker, 1979). For the history of calculus I recommend the book by C. B. Boyer, *The Concepts of the Calculus* (New York: Dover, 1949).

Proceedings of the 7th International Conference on Clustering Aspects of Nuclear Structure and Dynamics M. Korolija, Z. Basrak, R. Caplar, 2000 In the past three decades our understanding of the clustering behavior of nucleons in both nuclear structure and nuclear dynamics has evolved considerably. Moreover, the notion of the cluster has made its way into a number of scientific disciplines. This book provides an overview of the current understanding of clustering phenomena in nuclear structure and nuclear dynamics. The topics covered include: fundamental aspects of nuclear clustering, models of nucleon clusterization, clustering aspects of nuclear structure, selected topics on clustering aspects in medium- and high-energy nucleus-nucleus collisions.

Ceramic Materials and Components for Engines Jürgen G. Heinrich, Fritz Aldinger, 2008-11-21 Several ceramic parts have already proven their suitability for serial application in automobile engines in very impressive ways, especially in Japan, the USA and in Germany. However, there is still a lack of economical quality assurance concepts. Recently, a new generation of ceramic components, for the use in energy, transportation and environment systems, has been developed. The efforts are more and more system oriented in this field. The only possibility to manage this complex issue in the future will be interdisciplinary cooperation. Chemists, physicists, material scientists, process engineers, mechanical engineers and engine manufacturers will have to cooperate in a more intensive way than ever before. The R&D activities are still concentrating on gas turbines and reciprocating engines, but also on brakes, bearings, fuel cells, batteries, filters, membranes, sensors and actuators as well as on shaping and cutting tools for low expense machining of ceramic components. This book summarizes the scientific papers of the 7th International Symposium Ceramic Materials and Components for Engines. Some of the most fascinating new applications of ceramic materials in energy, transportation and environment systems are presented. The proceedings shall lead to new ideas for interdisciplinary activities in the future.

Semiconductor Characterization W. Murray Bullis,David G. Seiler,Alain C. Diebold,1996 Market: Those in government, industry, and academia interested in state-of-the-art knowledge on semiconductor characterization for research, development, and manufacturing. Based on papers given at an International Nist Workshop in January 1995, Semiconductor Characterization covers the unique characterization requirements of both silicon IC development and manufacturing, and compound semiconductor materials, devices, and manufacturing. Additional sections discuss technology trends and future requirements for compound semiconductor applications. Also highlighted are recent developments in characterization, including in- situ, in-FAB, and off-line analysis methods. The book provides a concise, effective portrayal of industry needs and problems in the important specialty of metrology for semiconductor technology.

Shielding Aspects of Accelerators, Targets and Irradiation Facilities--SATIF-7 OECD Nuclear Energy Agency,2005 Particle accelerators are used today for an increasing range of scientific and technological applications. They are very powerful tools to investigate the origin and structure of matter, and to improve understanding of the interaction of radiation with materials, including transmutation of nuclides and beneficial effects or risks from radiation. They are used to identify properties of molecules that can be used in pharmacy, for medical diagnosis and therapy, or for biophysics studies. Particle accelerators must be operated in safe ways that protect operators, the population and the environment. New technological and research applications give rise to new aspects in radiation shielding. These workshop proceedings review the state of the art in radiation shielding of accelerator facilities and of irradiated targets. They also evaluate progress made and discuss the additional developments required to meet radiation protection needs.
