Asteroid Hunters Carrie Nugent,2017-03-14 For the first time, scientists could have the knowledge to prevent a natural disaster epic in scale—an asteroid hitting the earth and in this exciting, adventuresome book, Carrie Nugent explains how. What are asteroids, and where do they come from? And, most urgently: Are they going to hit the Earth? What would happen if one was on its way? Carrie Nugent is an asteroid hunter—part of a group of scientists working to map our cosmic neighborhood. For the first time ever, we are reaching the point where we may be able to prevent the horrible natural disaster that would result from an asteroid collision. In *Asteroid Hunters*, Nugent reveals what known impact asteroids have had: the extinction of the dinosaurs, the earth-sized hole Shoemaker Levy 9 left in Jupiter just a few decades ago, how the meteorite that bursted over Chelyabinsk in Russia could have started a war, and unlucky Ms. Anne Hodges—the only person (that we know of) in US history to be the victim of a direct hit. Nugent also introduces the telescope she uses to detect near-Earth asteroids. Ultimately, detection is the key to preventing asteroid impact, and these specialized scientists are working to prevent the unthinkable from happening. If successful, asteroid hunting will lead to the first natural disaster humans have the know-how and the technology to prevent. The successful hunt and mapping of asteroids could mean nothing less than saving life on earth.

Intergalactic Travel and Asteroid Mining Daniel Mikelsten, Asteroid mining is the exploitation of raw materials from asteroids and other minor planets, including near-Earth objects. Based on known terrestrial reserves, and growing consumption in both developed and developing countries, key elements needed for modern industry and food production could be exhausted on Earth within 50 to 60 years. In response, it has been suggested that platinum, cobalt and other valuable elements from asteroids may

be mined and sent to Earth for profit, used to build solar-power satellites and space habitats, and water processed from ice to refuel orbiting propellant depots. Looking beyond the Milky Way, there are at least 2 trillion other galaxies in the observable universe. Space colonization can roughly be said to be possible when the necessary methods of space colonization become cheap enough to meet the cumulative funds that have been gathered for the purpose, in addition to estimated profits from commercial use of space. Intergalactic travel would either have to involve voyages lasting millions of years, or a possible faster than light propulsion method based on speculative physics, such as the Alcubierre drive. There are, however, no scientific reasons for stating that intergalactic travel is impossible in principle. Uploaded human minds or AI may be transmitted to other galaxies in the hope some intelligence there would receive and activate them.

Emerging Trends in Mobile Robotics Hideo

Fujimoto,Mohammad O Tokhi,Hiromi Mochiyama,Gurvinder S Virk,2010-08-23 This book provides state-of-the-art scientific and engineering research findings and developments in the area of mobile robotics and associated support technologies. The book contains peer reviewed articles presented at the CLAWAR 2010 conference. Robots are no longer confined to industrial manufacturing environments. A great deal of interest is invested in the use of robots outside the factory environment. The CLAWAR conference series, established as a high profile international event, acts as a platform for dissemination of research and development findings and supports such a trend to address the current interest in mobile robotics to meet the needs of mankind in various sectors of the society. These include personal care, public health, and services in the domestic, public and industrial environments. The editors of the book have extensive research experience and publications in the area of robotics in general and

in mobile robotics specifically, and their experience is reflected in editing the contents of the book. Contents: Plenary Presentations Autonomous Robots Biologically-Inspired Systems and Solutions Co-Operative Robot System, Manipulation and Gripping Flexible Mechanisms and Manoeuvring Systems Innovative Design of CLAWAR Locomotion Modelling and Simulation of CLAWAR Parallel Kinematic Machines: Applications and Future Challenges Perception, Sensing and Actuation Personal Assistance Robots Planetary Exploration, Navigation, Positioning and Localization Planning, Control, Intelligence and Learning for CLAWAR Rehabilitation and Function Restoration Service Robots Readership: Systems and control engineers, electrical engineers, mechanical engineers in academic, research and industrial settings; engineers and practitioners in the public services sectors in the health care, manufacturing, supply and delivery services. Like a Meteor Blazing Brightly Eric J. Wittenberg, 2016-04-30
Ulric Dahlgren was a brilliant, ambitious young man who became the youngest full colonel in the United States Army at the age of twenty-one, yet died before his twenty-second birthday. This is the first biography of Dahlgren, and thankfully it was penned by cavalry expert and award-winning author Eric J. Wittenberg. Wittenberg's account chronicles Dahlgren's full life story, with a deep look at his military career and extensive connections within the nation's capital, all of which led to the climax of his life: the notorious Dahlgren Raid. Like a Meteor Burning Brightly: The Short but Controversial Life of Colonel Ulric Dahlgren is based upon a plethora of source material, including previously unknown or little-used archival sources. Anyone interested in the Civil War in general, or just a fascinating life well-told, will want this book on

their shelf.

Seven Wonders of Asteroids, Comets, and Meteors Ron Miller, 2011-01-01 Presents information about the asteroids, comets, and meteors found in the solar system, describing their physical components, orbits, and the effects of their possible collisions with the Earth and other planets.

Hazards Due to Comets and Asteroids Tom Gehrels, 2021-11-30 In 1993, the U.S. Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact. It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima. Not all such space voyagers meet their end in the atmosphere, however; huge craters attest to the bombardment of earth over millions of years, and a major impact may have resulted in the extinction of dinosaurs. An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time. Hazards Due to Comets and Asteroids marks a significant step in the attempt to come to grips with the threats posed by such phenomena. It brings together more than one hundred scientists from around the world, who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards: searching for and identifying hazardous comets and asteroids; describing their statistics and characteristics; intercepting and altering the orbits of dangerous objects; and applying existent technologies—rocket boosters, rendezvous and soft-landing techniques, instrumentation—to such missions. The book considers defensive options for diverting or disrupting an approaching body, including solar sails, kinetic-energy impacts, nuclear explosives, robotic mass drivers, and various propulsion systems. A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow's technology is capable of averting. This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need

to deal with it.

The Space Race Vasil Teigens, The Space Race was a rivalry of the twentieth century between two great Super Powers in the Cold War, the Soviet Union (USSR) and the United States (USA), aimed at achieving the highest positions in space flight capabilities. It derives from the ballistic missile-based nuclear arms race that followed the Second World War. The technological advantage needed to quickly achieve milestones in space flight was considered essential for national security and combined with the symbolism and ideology to time. The Space Race led to pioneering efforts to launch artificial satellites, unmanned space probes to the Moon, Venus and Mars, and human space flights in low Earth orbit and the Moon.

Colonization of Near-Earth Space Peter Skalfist, Several project teams from NASA, ESA and other organizations have investigated the possibility of establishing a colony in orbit. They found that the Moon and near-Earth asteroids have enough materials available, that solar energy is readily available in large quantities. The advantages of this system are its proximity to the Earth and its lower escape velocity, which facilitates the exchange of goods and services.

New York Magazine ,1992-05-11 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

Jumping the Broom Tyler D. Parry,2020-10-02 In this definitive history of a unique tradition, Tyler D. Parry untangles the convoluted history of the broomstick wedding. Popularly associated with African American culture, Parry traces the ritual's origins to marginalized groups in the British Isles and explores how

it influenced the marriage traditions of different communities on both sides of the Atlantic Ocean. His surprising findings shed new light on the complexities of cultural exchange between peoples of African and European descent from the 1700s up to the twenty-first century. Drawing from the historical records of enslaved people in the United States, British Romani, Louisiana Cajuns, and many others, Parry discloses how marginalized people found dignity in the face of oppression by innovating and reimagining marriage rituals. Such innovations have an enduring impact on the descendants of the original practitioners. Parry reveals how and why the simple act of jumping the broom captivates so many people who, on the surface, appear to have little in common with each other.

25 Fun Things to Do with Your Friends and Family Paul Mason,2019-01-01 Turn off the screens and reconnect in real life with friends and family. Readers will be inspired to host a tea party, draw a family tree, interview interesting people, and save the planet before bedtime with 25 activities and projects to do with others.

The Conquest of Space Vasil Teigens,Peter Skalfist,Daniel Mikelsten, Although its roots lie in early rocket technologies and the international tensions that followed World War II, the space race began after the Soviet launch of Sputnik 1 on October 4, 1957. The space race became an important part of the cultural and technological rivalry between the USSR and the United States during the Cold War. Modern space exploration is reaching

unbelievable areas. Mars is the focal point of space exploration. In the long term, there are tentative plans for manned orbital and landing missions to the Moon and Mars, establishing scientific outposts that will then give way to permanent and self-sufficient settlements. Additional exploration will potentially involve expeditions and settlements on other planets and their moons, as well as the establishment of mining and fueling outposts, particularly in the asteroid belt. Physical exploration outside the solar system will be robotic in the foreseeable future.

Golf Balls, Boomerangs and Asteroids Brian H.

Kaye, 2008-07-11 Exciting reading for anyone with a curious mind! 'Walking one day by a golf course in Wisconsin, I was startled to hear a sharp bang as a golf ball narrowly missed my head and hit a tree. My companion cheerfully remarked, 'That could have killed you, you know.' I picked up the innocent looking little white ball and looked at it with new respect.' Prompted by this perilous experience, Brian Kaye has written a delightful and informative book on the design and behavior of different kinds of missiles from golf balls, arrows, and slingshots to comets and rockets to outer space. You'll learn about the science of tennis and find the answer to questions like why a golf ball has dimples or why a boomerang comes back. Don't miss Brian Kaye's latest, you'll be amused and amazed - and learn some physics to boot.
