National Medical Association (U.S.)

Asthma Wendy Murphy,2011-01-01 More than twenty million people in the United States suffer from asthma, a disease of the lungs. In fact, asthma is the most common serious chronic disease among American children. Any person at any age can be affected by asthma, but more cases have been linked to factors such as increased air pollution, exposure to tobacco smoke, and childhood obesity. Without preventive treatments and lifestyle adjustments, asthma . . . can be a serious, even deadly disease, reports USA TODAY, the Nation s No. 1 Newspaper. Fortunately, if a person is diagnosed properly, asthma symptoms can be managed. In this book, you will read case studies of people with asthma and how they handle the disease. Also included is up-to-date information about the common symptoms of asthma, how it is diagnosed, risk factors associated with the disease, and different forms of treatment. All of these facts can help you learn about the disease and what can be done if you or someone close to you has asthma.

The State of Childhood Asthma Omolara Jean Akinbami,2006

Improving Childhood Asthma Outcomes in the United States Marielena Lara,Will Nicholas,Sally C. Morton,Mary E. Vaiana,Barbara Genovese,2002-05-07 One-liner: A set of policy recommendations to promote the development and maintenance of communities in which children with asthma can be swiftly diagnosed, effectively treated, and protected from exposure to harmful environmental factors. An estimated 5 million U.S. children have

asthma. Too many of these children are unnecessarily impaired. Much of the money spent on asthma is for high-cost health care services to treat acute periods of illness. Many asthma attacks could be avoided--and much suffering prevented and many medical costs saved--if more children received good-quality, ongoing asthma care and if the 11 policy recommendations presented in this report were implemented in a coordinated fashion. A national call to action, the policy recommendations span public and private interests and compel integration of public health activities across local, state, and federal levels. This report summarizes the findings of an effort funded by the Robert Wood Johnson Foundation as part of the Pediatric Asthma Initiative, whose purpose is to address current gaps in national childhood asthma care. It is the first national initiative that simultaneously addresses treatment, policy, and financing issues for children with asthma at the patient, provider, and institutional levels. The purpose of RAND's effort was to:--identify a range of policy actions in both the public and private sectors that could improve childhood asthma outcomes nationwide--select a subset of policies to create a blueprint for national policy in this area--outline alternatives to implement these policies that build on prior efforts. The effort developed a comprehensive policy framework that maps the identified strategies to one overall policy objective: to promote the development and maintenance of asthma-friendly communities--communities in which children with asthma are swiftly diagnosed, receive appropriate and ongoing treatment, and are not exposed to environmental factors that exacerbate their condition. This report is intended as a working guide for coordinating the activities of both public and private organizations at the federal, state, and local community levels.

Allergies, Asthma and the Common Cold Scientific American Editors, 2014-05-19

During allergy season, sufferers know the drill: runny nose, watery eyes, sneezing up a storm. For the unlucky with asthma, symptoms might also include coughing and wheezing. However, asthma is not always caused by allergens like pollen and dust—non-allergenic asthma is brought on by a number of possible environmental or genetic triggers. Then there's the common cold, which also presents with similar symptoms. So what's causing your runny nose? In this eBook, *Allergies, Asthma and the Common Cold*, we review what we know about these three conditions as well as take a look at food allergies and what's on the horizon for allergy treatment and prevention. We begin in Section 1 with what causes allergies, including *Can It Be Bad To Be Too Clean?* in which Steve Mirsky interviews Johns Hopkins School of Medicine researcher Kathleen Barnes on the science behind the hygiene hypothesis, which suggests that early exposure to bacteria and viruses leads to a stronger immune system and a reduced likelihood of developing allergies later in life. Section 2 tackles asthma, which is reaching epidemic proportions in some parts of the world. In *Why Are Asthma Rates Soaring?* Veronique Greenwood examines why the hygiene hypothesis might fall short of explaining surging asthma rates. The common cold, on the other hand, shows many of the same symptoms but is caused by a virus rather than elevated levels of IgE, as explained in Section 3 by Jordan Lite in *What's the Difference Between Cold and Flu*. The last two sections examine treatment and prevention: Section 4 discusses interventions for food allergies specifically, including genetically modified foods and immunotherapy, whereas Section 5 looks into allergies in general. Several stories investigate how to harness our immune system, including *How Microbes Keep Us Healthy* by Katherine Harmon, who

describes how the equally fine-tuned human microbiome may be protecting us more than we know.

Clearing the Air Institute of Medicine, Division of Health Promotion and Disease Prevention, Committee on the Assessment of Asthma and Indoor Air, 2000-05-24 Since about 1980, asthma prevalence and asthma-related hospitalizations and deaths have increased substantially, especially among children. Of particular concern is the high mortality rate among African Americans with asthma. Recent studies have suggested that indoor exposures—to dust mites, cockroaches, mold, pet dander, tobacco smoke, and other biological and chemical pollutants—may influence the disease course of asthma. To ensure an appropriate response, public health and education officials have sought a science-based assessment of asthma and its relationship to indoor air exposures. Clearing the Air meets this need. This book examines how indoor pollutants contribute to asthma—its causation, prevalence, triggering, and severity. The committee discusses asthma among the general population and in sensitive subpopulations including children, low-income individuals, and urban residents. Based on the most current findings, the book also evaluates the scientific basis for mitigating the effects of indoor air pollutants implicated in asthma. The committee identifies priorities for public health policy, public education outreach, preventive intervention, and further research.

Guidelines for the Diagnosis and Management of Asthma U. S. Department of

Health and Human Services, National Institutes of Health, National Heart Lung Blood Institute, A, 2012-06-24 The National Institutes of Health Publication 07-4051, Guidelines for the Diagnosis and Management of Asthma, The EPR--3 Summary Report 2007, provides key information from the full report on the diagnosis and management of asthma. Summary information is provided on measures of assessment and monitoring, education for a partnership in asthma care, control of environmental factors and comorbid conditions that affect asthma, and medications. Key tables and figures from the full report are included for easy reference. Asthma is a chronic inflammatory disease of the airways. In the United States, asthma affects more than 22 million persons. It is one of the most common chronic diseases of childhood, affecting more than 6 million children (current asthma prevalence, National Health Interview Survey (NHIS), National Center for Health Statistics, Centers for Disease Control and Prevention, 2005) (NHIS 2005). There have been important gains since the release of the first National Asthma Education and Prevention Program (NAEPP) clinical practice guidelines in 1991. For example, the number of deaths due to asthma has declined, even in the face of an increasing prevalence of the disease (NHIS 2005); fewer patients who have asthma report limitations to activities; and an increasing proportion of people who have asthma receive formal patient education (Department of Health and Human Services, Healthy People 2010 midcourse review). Hospitalization rates have remained relatively stable over the last decade, with lower rates in some age groups but higher rates among young children 0–4 years of age. There is some indication that improved recognition of asthma among young children contributes to these rates. However, the burden of avoidable hospitalizations remains. Collectively, people who have asthma

have more than 497,000 hospitalizations annually (NHIS 2005). Furthermore, ethnic and racial disparities in asthma burden persist, with significant impact on African American and Puerto Rican populations. The challenge remains to help all people who have asthma, particularly those at high risk, receive quality asthma care. Advances in science have led to an increased understanding of asthma and its mechanisms as well as improved treatment approaches. To help health care professionals bridge the gap between current knowledge and practice, the NAEPP of the National Heart, Lung, and Blood Institute (NHLBI) has previously convened three Expert Panels to prepare guidelines for the diagnosis and management of asthma. The NAEPP Coordinating Committee (CC), under the leadership of Claude Lenfant, M.D., Director of the NHLBI, convened the first Expert Panel in 1989. The charge to that Panel was to develop a report that would provide a general approach to diagnosing and managing asthma based on current science. Published in 1991, the “Expert Panel Report: Guidelines for the Diagnosis and Management of Asthma” (EPR 1991) organized the recommendations for the treatment of asthma around four components of effective asthma management: Use of objective measures of lung function to assess the severity of asthma and to monitor the course of therapy; Environmental control measures to avoid or eliminate factors that precipitate asthma symptoms or exacerbations; Patient education that fosters a partnership among the patient, his or her family, and clinicians; Comprehensive pharmacologic therapy for long-term management designed to reverse and prevent the airway inflammation characteristic of asthma as well as pharmacologic therapy to manage asthma exacerbations. The NAEPP recognizes that the value of clinical practice guidelines lies in their presentation of the best and most current evidence available. This

report presents recommendations for the diagnosis and management of asthma that will help clinicians and patients make appropriate decisions about asthma care. ~

Conquering Asthma Michael T. Newhouse, Peter J. Barnes, 1994 During the past decade, major scientific advances have occurred in our understanding of asthma and associated diseases of the airways such as rhinitis and sinusitis. These developments have been accompanied by new, potent and safe medications and better drug delivery systems. As a result, most people with asthma and similar problems involving the nose, eyes and ears can now have their conditions completely controlled so that they no longer suffer from breathlessness, cough or wheeze. The end result is an improved quality of life for people who no longer need miss school, work or recreational activities. *Conquering Asthma* will show most asthmatics how to live a healthier and happier life, hardly aware that they have asthma. We hope that you will enjoy understanding and participating actively with your doctor in the self care of your disease.

Asthma Education Ian Mitchell, Gaynor Govias, 2021-08-23 This book comprehensively presents all the necessary information health professionals need to become Certified Asthma Educators. Competent asthma educators must possess a number of skills: they must have appropriate and sound medical and pharmaceutical knowledge; be proficient and effective educators who can influence their patients' behaviors for the better; and, finally, they need the administrative and organizational skills needed to set up and run efficient clinics at their places of work. The book is divided into three sections to meet those needs: Asthma: The Fundamentals; The Role of Education; and, The Effective Asthma Educator. The first section covers clinical knowledge of asthma, with chapters including

lung structure and function, clinical presentation of asthma, and environmental issues in asthma management. The second section delves into the role of educating patients and teaches readers how to best do that with an integrated approach between physician, educator, and patient. The third section looks further into educating techniques with a view of the learning process, considerations for instruction locations, and the role the educator plays overall. The final chapter in the book presents example cases for readers to assess the knowledge they have learned throughout. This second edition serves as both textbook and study guide for certification as well as a long-term reference publication. It has been fully updated from the previous edition with the latest treatment guidelines, medications, and disease monitoring methods. This is an ideal guide for asthma educators, those seeking NAECEB certification, and any health professional involved with individuals who have asthma.

Severe Asthma Kian Fan Chung, Elliot Israel, Peter G. Gibson, 2019-06-01 Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma – epidemiology, diagnosis, mechanisms, treatment and management – but has a particular focus on recent understanding of mechanistic heterogeneity based on an analytic approach using various ‘omics platforms applied to clinically well-defined asthma cohorts. How these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.

Ambulatory Care Visits for Asthma Catharine W. Burt, Deanne E. Knapp, 1996

America Breathing Easier U. S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Program, 2012-06-26 CDC's National Asthma Control Program (NACP) was created in 1999 to help the millions of people with asthma in the United States gain control over their disease. The program's goals include reducing the

number of deaths, hospitalizations, emergency department visits, school days or workdays missed, and limitations on activity due to asthma. The NACP funds states, cities, school programs, and non-government organizations to help them improve surveillance of asthma, train health professionals, educate individuals with asthma and their families, and explain asthma to the public. The program has improved asthma treatment, management, and control in the U.S. The NACP collects data on state-specific levels to focus efforts and resources where they are needed. CDC's funded programs have improved the quality of asthma care, improved asthma management in schools, and fostered policies to help reduce air pollution. CDC's National Asthma Control Program plays a critical role in helping America breathe easier by learning more about asthma and how to control it. Four thousand people die each year from asthma-related causes, and asthma is a contributing factor in another 7,000 deaths every year. In asthma, something – air pollution, allergens, exercise, stress, certain chemicals in the workplace – causes the airways of the lungs to narrow or become blocked, making it hard to breathe. For the most part we don't know why some people have asthma and other do not – although we're getting closer every day – but thanks to the work of medical researchers, health care professionals, and public health specialists, we're doing more to help people with the disease alleviate some of their burden. But the burden of asthma falls not only on individuals with asthma. It also falls on our schools, our families, our neighborhoods, our workplaces, our cities, and our states. It falls on our health care system. It falls on all Americans, whether or not we have asthma, because we pay for that burden with higher health insurance rates, with lost productivity, and with our tax dollars. The CDC National Asthma Control Program funds states, cities, and

school programs to help them improve surveillance of asthma, train health professionals, educate individuals with asthma and their families, and explain asthmas to the public. To maintain that progress, CDC and its federal, state, local, and nonprofit partners must continue the vital work of tracking asthma, enhancing the capacity of federal, state and local public health offices; training health practitioners and educators; implementing proven interventions; filling in gaps in research; and increasing the American people's understanding of asthma. As part of a joint, coordinated effort, these people, programs, and policies can alleviate the burden of asthma and keep America breathing easier.~
