

Astrolabe Clock

Henry C. King, John R. Millburn

The Borghesi Astronomical Clock in the Museum of History and Technology
Silvio A. Bedini, 2022-08-10 This is the text of a Bulletin released by the Museum of History and Technology in Washington U.S.A. Bulletins consisting of one or more papers were periodically released for the information of the students and the general public. This bulletin describes the history of astronomical clocks in general and then talks about the designer, Borghesi, and the clockmaker, Bertolla.

Heavenly Clockwork Joseph Needham, Ling Wang, Derek J. De Solla Price, 1986-09-18 A reissue with a foreword and supplement, of a modern classic published in 1960. The invention of the mechanical clock was one of the most important turning points in the history of science and technology. This study revealed six centuries of mechanical clockwork preceding the first mechanical escapement clocks of the West of about AD 1300. Detailed and fully illustrated accounts of elaborate Chinese clocks are accompanied by a discussion of the social context of the Chinese inventions and an assessment of their possible transmission to medieval Europe. For this revised edition, Dr Joseph Needham has contributed a new foreword on recent research and perceptions. In a supplement John H. Combridge details a modern reconstruction of Su Sung's timekeeping device, which together with textual studies modifies our understanding of this important early technology.

The Astronomical Clock of Strasbourg Cathedral Günther Oestmann, 2020-04-20 This book gives not only a detailed delineation of the artistic and technical components of the 1571-74 clock but it also presents new insight in the astronomical indications and the underlying conceptional framework.

God's Clockmaker John North, 2010-07-15 Clocks became common in late medieval Europe and the measurement of time began to rule everyday life. God's Clockmaker is a biography of England's greatest medieval scientist, a man who solved major practical and theoretical problems to build an extraordinary and pioneering astronomical and astrological clock. Richard of Wallingford (1292-1336), the son of a blacksmith, was a brilliant mathematician with a genius for the practical solution of technical problems. Trained at Oxford, he became a monk and then abbot of the great abbey of St Albans, where he built his clock. Although as abbot he held great power, he was also a tragic figure, becoming a leper. His achievement, nevertheless, is a striking example of the sophistication of medieval science, based on knowledge handed down from the Greeks via the Arabs.

The Enchanted Clock Julia Kristeva, 2018-01-02 In the Palace of Versailles there is a fabulous golden clock, made for Louis XV by the king's engineer, Claude-Siméon Passemant. The astronomical clock shows the phases of the moon and the movements of the planets, and it will tell time—hours, minutes, seconds, and even sixtieths of seconds—until the year 9999. Passemant's clock brings the nature of time into sharp focus in Julia Kristeva's intricate, poetic novel *The Enchanted Clock*. Nivi Delisle, a psychoanalyst and magazine editor, nearly drowns while swimming off the Île de Ré; the astrophysicist Theo Passemant fishes her out of the water. They become lovers. While Theo wonders if he is descended from the clockmaker Passemant, Nivi's son Stan, who suffers from occasional comas, develops a passion for the remarkable clock at Versailles. Soon Nivi is fixated on its maker. But then the clock is stolen, and when a young writer for Nivi's magazine mysteriously dies, the clock is found near his body. *The Enchanted Clock* combines past and present, jumping back and forth between points of view and across eras from eighteenth-century Versailles to the present day. Its stylistically inventive narrative voices bring both immediacy and depth to our understanding of

consciousness. Nivi's life resembles her creator's in many respects, coloring Kristeva's customary erudition with autobiographical poignancy. Part detective mystery, part historical fiction, *The Enchanted Clock* is a philosophically and linguistically multifaceted novel, full of poetic ruminations on memory, love, and the transcendence of linear time. It is one of the most illuminating works of one of France's great writers and thinkers.

The Hall of Heavenly Records Joseph Needham, Lu Gwei-Djen, John H. Combridge, John S. Major, 2004-12-16 Four distinguished historians of Asian science examine the creation of some remarkable early scientific instruments.

Longitude Dava Sobel, 2010-07-05 The dramatic human story of an epic scientific quest and of one man's forty-year obsession to find a solution to the thorniest scientific dilemma of the day--the longitude problem. Anyone alive in the eighteenth century would have known that the longitude problem was the thorniest scientific dilemma of the day--and had been for centuries. Lacking the ability to measure their longitude, sailors throughout the great ages of exploration had been literally lost at sea as soon as they lost sight of land. Thousands of lives and the increasing fortunes of nations hung on a resolution. One man, John Harrison, in complete opposition to the scientific community, dared to imagine a mechanical solution--a clock that would keep precise time at sea, something no clock had ever been able to do on land. *Longitude* is the dramatic human story of an epic scientific quest and of Harrison's forty-year obsession with building his perfect timekeeper, known today as the chronometer. Full of heroism and chicanery, it is also a fascinating brief history of astronomy, navigation, and clockmaking, and opens a new window on our world.
