Flying Magazine ,1988-01

*Astronaut Academy: Zero Gravity* Dave Roman,2021-04-06 Beautifully updated with fresh color, this new edition *Astronaut Academy: Zero Gravity* is the first volume of the middle-grade graphic novel series from Dave Roman. Hakata Soy's past won't stay in the past! This former space hero is doing his best to keep his head down at Astronaut Academy. Things aren't going so great, though. The most popular girl in school has it in for him. His best friend won't return his calls. And his new roommate is a complete jock who only cares about Fireball. Hakata just wants to make a fresh start. But how will he find time to study Anti-Gravity Gymnastics and Tactical Randomness when he's got a robot doppelganger on its way to kill him?

*Astronaut Academy: Splashdown* Dave Roman,2021-04-06 *Astronaut Academy: Splashdown* is the exciting third installment of the middle grade graphic novel series from author Dave Roman. Heroes like Hakata Soy don't take vacation! It's summer vacation for the students of Astronaut Academy, and Maribelle Mellonbelly is throwing the best party ever on Beach Planet? Yes! But tensions heat up fast when Hakata Soy's arch rival, Rick Raven, arrives. And soon the whole planet is heating up—with a giant volcano threatening to blow its top! Unless they can work together save the planet, the students of Astronaut Academy will be toast. But can they put aside their differences in time to turn the tides?

**Calculated Risk** George Leopold,2016-06-15 Unlike other American astronauts, Virgil I. Gus Grissom never had the chance to publish his memoirs. Killed along with his crew in a launch pad fire on January 27, 1967, Grissom also lost his chance to walk on the moon and return to describe his journey. Others went in his place. The stories of the moon walkers are familiar. Less appreciated are Grissom's contributions. The international prestige of winning the Moon Race cannot be understated, and Grissom played a pivotal and enduring role in securing that legacy for the United States. Indeed, Grissom was first and foremost a Cold Warrior, a member of the first group of Mercury astronauts whose goal it was to beat the Soviet Union into space and eventually to the moon. Drawing on extensive interviews with fellow astronauts, NASA engineers, family members, and friends of Gus Grissom, George Leopold delivers a comprehensive and corrective account of Grissom's life that places his career in the context of the Cold War and the history of human spaceflight. *Calculated Risk: The Supersonic Life and Times of Gus Grissom* adds significantly to our understanding of that tumultuous and ultimately triumphant period in American history.

**The Conquest of Space** Vasil Teigens,Peter Skalfist,Daniel Mikelsten, Although its roots lie in early rocket technologies and the international tensions that followed World War II, the space race began after the Soviet launch of Sputnik 1 on October 4, 1957. The space race became an important part of the cultural and technological rivalry between the USSR and the United States during the Cold War. Modern space exploration is reaching unbelievable areas. Mars is the focal point of space exploration. In the long term, there are tentative plans for manned orbital and landing missions to the Moon and Mars, establishing scientific outposts that will then give way to permanent and self-sufficient settlements. Additional exploration will potentially involve expeditions and settlements on other planets and their moons, as well as the establishment of mining and fueling outposts, particularly in the asteroid belt. Physical exploration outside the solar system will be robotic in the foreseeable future.

**We Are All Astronauts** Marc Blancher,Marc Bonner,Colleen Boyle,Martin Butler,Jörg Hartmann,Alexander Hauk,Sophia Hauk,Thomas Hensel,Matthew H. Hersch,Ansgar Oswald,Nils Daniel Peiler,Umberto Rossi,2019-06-21 We are all astronauts, the American architect and thinker Richard Buckminster Fuller wrote in 1968 in his book *Operating Manual for Spaceship Earth*, where he compared Earth to a spaceship, provided only with exhaustible resources while flying through space. These words show the presence the phenomenon of the astronaut and the cosmonaut had in the public mind from the second half of the twentieth century on: Buckminster Fuller was able to drive his point home by asking his audience to identify with one of the most prominent figures in the public sphere then: the space traveler. At the same time, Buckminster Fuller's words themselves seem to have played a significant role in further shaping the space-exploring human as a symbol and an image of humankind in general. The twelve contributions in this book by authors from the fields of literature, music, politics, history, the visual arts, film, computer games, comics, social sciences, and media theory track the development, changes and dynamics of this symbol by analyzing the various images of the astronaut and the cosmonaut as constructed throughout the different decades of space exploration, from its beginning to the present day.

One Giant Leap Charles Fishman,2020-09-22 The New York Times bestselling, “meticulously researched and absorbingly written” (The Washington Post) story of the trailblazers and the ordinary Americans on the front lines of the epic Apollo 11 moon mission. President John F. Kennedy astonished the world on May 25, 1961, when he announced to Congress that the United States should land a man on the Moon by 1970. No group was more surprised than the scientists and engineers at NASA, who suddenly had less than a decade to invent space travel. When Kennedy announced that goal, no one knew how to navigate to the Moon. No one knew how to build a rocket big enough to reach the Moon, or how to build a computer small enough (and powerful enough) to fly a spaceship there. No one knew what the surface of the Moon was like, or what astronauts could eat as they flew there. On the day of Kennedy’s historic speech, America had a total of fifteen minutes of spaceflight experience—with just five of those minutes outside the atmosphere. Russian dogs had more time in space than US astronauts. Over the next decade, more than 400,000 scientists, engineers, and factory workers would send twenty-four astronauts to the Moon. Each hour of space flight would require one million hours of work back on Earth to get America to the Moon on July 20, 1969. “A veteran space reporter with a vibrant touch—nearly every sentence has a fact, an insight, a colorful quote or part of a piquant anecdote” (The Wall Street Journal) and in *One Giant Leap*, Fishman has written the sweeping, definitive behind-the-scenes account of the furious race to complete one of mankind’s greatest achievements. It’s a story filled with surprises—from the item the astronauts almost forgot to take with them (the American flag), to the extraordinary impact Apollo would have back on Earth, and on the way we live today. From the research labs of MIT, where the eccentric and legendary pioneer Charles Draper created the tools to fly the Apollo spaceships, to the factories where dozens of women sewed spacesuits, parachutes, and even computer hardware

by hand, Fishman captures the exceptional feats of these ordinary Americans. “It’s been 50 years since Neil Armstrong took that one small step. Fishman explains in dazzling form just how unbelievable it actually was” (Newsweek).

**Fighting to Survive Space Disasters** Elizabeth Raum, 2019-08 Being lost is scary. Being lost in space is terrifying. These true tales of surviving a disaster in space follow real astronauts through harrowing ordeals in which they relied on their training, instincts, and courage to survive.
