The Second Hinode Science Meeting Bruce W. Lites, 2009 Au verso de la couverture : The international Hinode mission was launched from Japan on 23 September 2006. The spacecraft carries a suite of instruments that permit observations of the Sun and its atmosphere with unprecedented resolution and precision. During its first two years of operation, Hinode has enabled numerous breakthroughs in our understanding of magnetic fields within the solar atmosphere and their relationship to the energetic solar phenomena that affect the Earth's space environment. Some of those breakthroughs were presented at the First Hinode Science Meeting held in Dublin, Ireland, in August 2007 (ASPCS Volume 397). By the time the Second Hinode Science Meeting was held in Boulder, Colorado, 29 September-3 October 2008, researchers had been able to subject Hinode data to in-depth, quantitative analyses and to make comparisons with detailed numerical and analytic models of solar phenomena. This volume presents brief summaries of work presented at the Second Hinode Science Meeting

Embracing the Future Astronomical Society of the Pacific. Annual Meeting, 2021 The Astronomical Society of the Pacific's 132nd annual meeting was held in December 2020 amidst a global pandemic that continues to challenge education and public outreach, the emergence of genuine widespread interest in social justice and inclusion, and a growing awareness of the threat of global climate change. This virtual conference of K-16 educators and public engagement professionals in astronomy and related fields shared best practices, innovative ideas, lessons learned, research findings, and evaluation results to help the community move toward a better future. This ASP conference was its first virtual event of its kind and included over 350 attendees. Thematic strands for this conference included: online K-16 teaching and learning; public engagement in informal settings; science communication and social media; diversity, equity, inclusion and social justice; and climate/environmental science and dark skies preservation.

Preparing for the 2009 International Year of Astronomy Michael G. Gibbs, Jonathan Barnes, James G. Manning, 2008 Endorsed by the United Nations, UNESCO, and the International Astronomical Union, 2009 is designated as the International Year of Astronomy (IYA) and provides a year to celebrate and reflect on 400 years of changing perspectives of the universe. In conjunction with the American Astronomical Society (AAS), the Astronomical Society of the Pacific (ASP) convened an IYA symposium and series of workshops at the AAS summer meeting in St. Louis, Missouri, USA, from May 31 to June 4, 2008. During this conference, astronomy and space science professionals gathered to share ideas and plans, forge connections and collaborations, and organize their efforts to make 2009 a singular year for advancing astronomy awareness and education. This volume contains the content of the meeting, plus an additional resource section. It serves as a reference to aid those involved in the IYA as they make professional connections, access resources, and maximize their efforts to encourage the world's citizens to look up and discover anew the universe around us. The Astronomical Society of the Pacific (ASP), founded in 1889, increases the understanding and appreciation of astronomy by engaging scientists, educators, enthusiasts and the public to advance science and science literacy. Visit www.astrosociety.org for additional information regarding the ASP and how you can join the Society and support the cause of improving science literacy.-- Publisher's website

Polarimetry of Stars and Planetary Systems Ludmilla Kolokolova, James Hough, Anny-Chantal Levasseur-Regourd, 2015-05-14 Summarising the striking advances of the last two decades, this reliable introduction to modern astronomical polarimetry provides a comprehensive review of state-of-the-art techniques, models and research methods. Focusing on optical and near-infrared wavelengths, each detailed, up-to-date chapter addresses a different facet of recent innovations, including new instrumentation, techniques and theories; new methods based on laboratory studies, enabling the modelling of polarimetric characteristics for a wide variety of astronomical objects; emerging fields of polarimetric exploration, including proto-planetary and debris discs, icy satellites, transneptunian objects, exoplanets, and the search for extraterrestrial life; and unique results produced by space telescopes, and polarimeters aboard exploratory spacecraft. With contributions from an international team of accomplished researchers, this is an ideal resource for astronomers and researchers working in astrophysics, earth sciences, and remote sensing keen to learn more about this valuable diagnostic tool. The book is dedicated to the memory of renowned polarimetrist Tom Gehrels.

Pioneer of Galactic Astronomy: A Biography of Jacobus C. Kapteyn Pieter C. van der Kruit, 2020-12-28 This non-technical biography of Jacobus Cornelius Kapteyn (1851-1922) presents to the general reader the scientific life of the astronomer who pioneered the studies of the structure of the Milky Way Galaxy. In telling Kapteyn's story the author weaves in astronomy basics and uses modern astronomical images to show the developments of astronomical research from Kapteyn's times to the present. In particular the study of the distribution of stars in space has now culminated with spectacular new insights coming from the astrometric satellite GAIA, which is receiving much public attention today. The biography shows how Kapteyn's ideas influenced prominent astronomers worldwide. He is prominent as designer of the Kapteyn Universe, the alternative to the large system found by Harlow Shapley. He is the discoverer of Kapteyn's Star, still the second fastest moving star in the sky, which is now one of the nearest stars with a planet in the habitable zone. This fascinating hybrid of astronomy history and popular astronomy tells the story of the astronomy professor without an observatory who founded the first astronomical laboratory specializing in measuring photographic plates exposed elsewhere. Kapteyn took astronomy out of cataloguing stars to measuring distances and velocities in order to study their spatial distribution, systematic motions (Kapteyn's Star Streams) and the equilibrium between their gravity and motions. His legacy includes, in addition to the first application of Galactic structure and dynamics, Jan Hendrik Oort, the famous astronomer from Leiden, who as a student was so impressed by Kapteyn's lectures that

he decided to become an astronomer.

The book delves into Astronomical Society Of The Pacific's 2013 Annual Meeting. Astronomical Society Of The Pacific's 2013 Annual Meeting is a vital topic that needs to be grasped by everyone, from students and scholars to the general public.
