Manwaring, Rob, Kennedy, Paul

Foliicolous Lichens Robert Lücking, 1992

Why the Left Loses Manwaring, Rob, Kennedy, Paul, 2018 Around the world, parties of the left and center-left have been struggling, losing ground to right-wing parties and various forms of reactionary populism. This book brings together a range of leading academics and experts on social democratic politics and policy to offer an international, comparative view of the changing political landscape. Using case studies from the United Kingdom, Germany, Spain, France, Australia and New Zealand contributors argue that despite different local and specific contexts, the mainstream center-left is beset by a range of common challenges. Analysis focuses on institutional and structural factors, the role of key individuals, and the atrophy of progressive ideas as interconnected reasons for the current struggles of the center-left.

Interest-Rate Option Models Riccardo Rebonato, 1998-05-05 Overall this book provides an excellent summary of the state of knowledge of term structure modelling. It combines a solid academic background with the practical experience of someone who works in the financial sector. Alan White and John Hull, A-J Financial Systems, Canada The modelling of exotic interest-rate options is such an important and fast-moving area, that the updating of the extremely successful first edition has been eagerly awaited. This edition re-focuses the assessment of various models presented in the first edition, in light of the new developments of modelling imperfect correlation between financial quantities. It also presents a substantial new chapter devoted to this revolutionary modelling method. In this second edition, readers will also find important new data dealing with the securities markets and the probabilistic/stochastic calculus tools. Other changes include: a new chapter on the issues arising in the pricing of several classes of exotic interest-rate instruments; and insights from the BDT

and the Brennan and Schwartz approaches which can be combined into a new class of generalised models. Further details can be found on the links between mean-reversion and calibration for important classes of models.

Violence and Mental Health Jutta Lindert, Itzhak Levav, 2015-02-25 Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of ‘undoing violence’ by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

Biodiversity Databases Gordon B. Curry, Chris J. Humphries, 2016-04-19 Computing and database management has shifted from cottage industry-style methods — the small independent researcher keeping records for a particular project — to state-of-the-art file storage systems, presentation, and distribution over the Internet. New and emerging techniques for recognition, compilation, and data

management have made managing data a discipline in its own right. Covering all aspects of this data management, Biodiversity Databases: Techniques, Politics, and Applications brings together input from social scientists, programmers, database designers, and information specialists to delineate the political setting and give institutions platforms for the dissemination of taxonomic information. A practical and logical guide to complex issues, the book explores the changes and challenges of the information age. It discusses projects developed to provide better access to all available biodiversity information. The chapters make the case for the need for representation of concepts in taxonomic databases. They explore issues involved in connecting databases with different user interfaces, the technical demands of linking databases that are not entirely uniform in structure, and the problems of user access and the control of data quality. The book highlights different approaches to addressing concerns associated with the taxonomic impediment and the low reproducibility of taxonomic data. It provides an in-depth examination of the challenge of making taxonomic information more widely available to users in the wider scientific community, in government, and the general population.
