Beyond the Multiplex Barbara Klinger,2023-09-01 Since the mid-eighties, more audiences have been watching Hollywood movies at home than at movie theaters, yet little is known about just how viewers experience film outside of the multiplex. This is the first full-length study of how contemporary entertainment technologies and media—from cable television and VHS to DVD and the Internet—shape our encounters with the movies and affect the aesthetic, cultural, and ideological definitions of cinema. Barbara Klinger explores topics such as home theater, film collecting, classic Hollywood movie reruns, repeat viewings, and Internet film parodies, providing a multifaceted view of the presentation and reception of films in U.S. households. Balancing industry history with theoretical and cultural analysis, she finds that today cinema's powerful social presence cannot be fully grasped without considering its prolific recycling in post-theatrical venues—especially the home.

At Home in the World Janet O'Shea,2007-05-21 The compelling story of a beautiful and versatile South Indian dance form

Movies at Home Kerry Segrave,1999-01-01 The relationship of Hollywood and television, initially turbulent, has ultimately been profitable from the first sally in what was expected to be a war of attrition, up through the soliciting of movies by major networks, independent stations, basic cable networks, premium cable channels, pay-per-view systems and even the corner video store. When their initial efforts to acquire ownership interests in television outlets were thwarted, Hollywood's major movie studios determined to withhold from the tube not only their films but also their actors, no doubt in hopes of making the rival medium appear a weak substitute for cinema. With ticket sales shrinking and television set purchases booming, the studios, erasing their last contemptuously drawn line in the sand, grudgingly released their films to television--and made a fortune.

Digital Learning in High-Needs Schools Heejung An,David A. Fuentes,2023-06-21 Digital Learning in High-Needs Schools examines the challenges and affordances that arise when high-needs school communities integrate educational technologies into their unique settings. Although remote, blended, and networked learning are ubiquitous today, a number of cultural, economic, and political realities—from the digital divide and digital literacy to poverty and language barriers—affect our most vulnerable and underresourced teachers and students. This book uses critical theory to compassionately scrutinize and unpack the systemic issues that impact high-needs schools' implementation of digital learning tools. Incisive sociocultural analyses across fifteen original chapters explore the intersection of society, technology, people, politics, and education in high-needs school contexts. Informed by real-world cases pertaining to technology infrastructure, formative feedback, Universal Design for Learning, and more, these chapters illuminate how best practices emerge from culturally responsive and context-specific foundations.

Men Against Fire S.L.A. "Slam" Marshall, 2019-12-06 *Men Against Fire*, first published in 1947 (and updated in 1961), is an in-depth analysis of military leadership and infantry tactics, with numerous recommendations to improve the effectiveness of ground troops in combat situations. The psychology of combat (e.g., chapters "Why Men Fight" and "Men Under Fire") is also examined by Marshall, himself a veteran of World War I and a combat historian during World War II. S.L.A. Slam Marshall was a veteran of World War I and a combat historian during World War II. He startled the military and civilian world in 1947 by announcing that, in an average infantry company, no more than one in four soldiers actually fired their weapons while in contact with the enemy. His contention was based on interviews he conducted immediately after combat in both the European and Pacific theaters of World War II.

Television at Work Kit Hughes, 2019-12-02 Television has never been exclusive to the home. In *Television at Work*, Kit Hughes explores the forgotten history of how U.S. workplaces used television to secure industrial efficiency, support corporate expansion, and manage the hearts, minds, and bodies of twentieth century workers. Challenging our longest-held understandings of the medium, Hughes positions television at the heart of a post-Fordist reconfiguration of the American workplace revolving around dehumanized technological systems. Among other things, business and industry built private television networks to distribute programming, created complex CCTV data retrieval systems, encouraged the use of videotape for worker self-evaluation, used video cassettes for training distributed workforces, and wired cantinas for employee entertainment. In uncovering industrial television as a prolific sphere of media practice, *Television at Work* reveals how labor arrangements and information architectures shaped by these uses of television were foundational to the rise of the digitally mediated corporation and to a globalizing economy.

The Out-of-Home Immersive Entertainment Frontier Kevin Williams, Michael Mascioni, 2017-03-02 Digital Out of Home Entertainment is rather an arcane description for one of the fastest growing technology-sectors. These forms of interactive technology, often established on a 'pay per use' basis are transforming the customer experience in shops, cinemas, museums; almost any environment where consumers are congregating. Kevin Williams and Michael Mascioni's *The Out-of-Home Immersive Entertainment Frontier* provides a 'state of play' exploration of the successes, the emerging new applications and the strategies that inform them. The authors interviewed nearly 70 leading executives from many familiar organisations in every facet of the digital out-of-home entertainments industry. The result is an essential guide for entertainment executives as well as those involved in retailing, the hotel industry, mobile communications, museums and heritage.
