*North Atlantic Region Air Traffic Survey, FY 1962* Richard M. Warfield,United States. Federal Aviation Agency. Systems Research and Development Service,1963 This report summarizes the traffic data collected in the North Atlantic Region Traffic Survey during FY 1962. Monthly peak day flight plan data was collected from 12 participating Oceanic Area Control Centers (OACCs) by the Federal Aviation Agency. An estimated total of 110,000 unduplicated flights (i.e., flights counted only once regardless of the number of OACC's involved) flew somewhere within the North Atlantic Region during FY 1962. The peak day for the survey was September 10, 1961, when there were 291 civil and 209 military flights combining for a total of 500 flights. Approximately two-thirds of all surveyed flights were by civil aircraft. Military flights above 45,000 feet and those flying in airspace altitude reservations were not included in the survey. The most frequently used altitudes at mid-Atlantic (30°W meridian were the 33,000 and 35,000 foot flight levels. Instantaneous airborne aircraft counts (IAC) were calculated at the beginning of each hour during the monthly peak days. A peak IAC of 94 aircraft occurred at 0500Z on September 10, 1961.

Delaware Aviation Jan Churchill (ATP,CFII, USCGAUX) and Brig. Gen. Kennard R. Wiggins, Jr. (DE ANG Retired),2014 For such a small state, Delaware has a fascinating aviation history. Delaware counts aircraft from the smallest, like the 1910 Delaplane, to the largest, the USAF C-5 Galaxy airlifter, among its rich variety. Numerous small grass airstrips dotted the state in the early years, serving as an incubator for aerial progress. The state has been a home to aircraft manufacturers, notable aviators, and aeronautical innovators and hosts military aviation units from the Army National Guard, the Air National Guard, the US Air Force, and the Air Force Reserve on two major bases. World War II brought the development of Dover Air Force Base, currently the largest aerial superport in the United States. This collection of historical photographs depicts the colorful people, the locales, the varied aircraft, and the milestone events that make up the history of aviation in Delaware.

*Naval Air Station Atlantic City* Richard V. Porcelli, 2012 Few would guess Atlantic City has a rich aviation history, being instrumental in many technical advances and playing a key role in the defense of the nation. The wartime role of Naval Air Station Atlantic City, commissioned in 1943, was training naval fighter pilots as well as developing technology and procedures for ground controlled interception of enemy aircraft. After the war, Atlantic City was the site of testing new Navy aircraft as well as the development of all-weather, night-fighting, and attack capabilities. After the Navy left in 1958, the airfield became home to the Federal Aviation Administration's premier research center, a New Jersey Air National Guard jet fighter base, a US Coast Guard air station, and Atlantic City International Airport.

Yesterday We Were in America Brendan Lynch, 2019-02-18 On 14 June 1919 – eight years before Charles Lindbergh's flight across the Atlantic – two men from Manchester took off in an open-cockpit Vickers Vimy and flew into the history books. They battled through a sixteen-hour journey of snow, ice and continuous cloud, with a non-functioning wireless and a damaged exhaust that made it impossible to hear each other. And then, just five hours away from Ireland and high above the sea, the Vimy stalled. *Yesterday We Were in America* is the incredible story of John Alcock and Arthur Whitten Brown, and how they gave hope to a post-war world that was in grave need of it.

*Wings over Florida* Lynn M. Homan, Thomas Reilly, 1999-07-27 Florida's contribution to aviation history cannot be underestimated. *Wings over Florida* chronicles the story of flying in the "Sunshine State," from the early pioneers in gliders and balloons, to the recent developments in the space program. The story of Florida in flight is even older than its statehood, with Colonel John Sherburne planning to use balloons as early as 1840 in the Second Seminole War. Not only was the first scheduled passenger airline (the St. Petersburg-Tampa Airboat Line) begun in Florida, but it is also home to the world's oldest international airline. Many heroes and heroines of the air came from Florida. Even those who were not Floridians by birth spent time flying in the ideal conditions that Florida provided. Pioneers, such as Charles Lindbergh, Amelia Earhart, Peter Sones, and Jacqueline Cochran, all took to the air over Florida.

**Empire of the Air** Jenifer Van Vleck, 2013-11-01 Jenifer Van Vleck's fascinating history reveals the central role commercial aviation played in the United States' ascent to global preeminence in the twentieth century. As U.S. military and economic influence grew, the federal government partnered with the aviation industry to deliver American power across the globe and to sell the idea of the

American Century to the public at home and abroad. The airplane promised to extend the frontiers of the United States to infinity, as Pan American World Airways president Juan Trippe said. As it accelerated the global circulation of U.S. capital, consumer goods, technologies, weapons, popular culture, and expertise, few places remained distant from Wall Street and Washington. Aviation promised to secure a new type of empire—an empire of the air instead of the land, which emphasized access to markets rather than the conquest of territory and made the entire world America's sphere of influence. By the late 1960s, however, foreign airlines and governments were challenging America's control of global airways, and the domestic aviation industry hit turbulent times. Just as the history of commercial aviation helps to explain the ascendance of American power, its subsequent challenges reflect the limits and contradictions of the American Century.

**China Airborne James Fallows,2013-02-26** From one of our most influential journalists, here is a timely, vital, and illuminating account of the next stage of China's modernization—its plan to rival America as the world's leading aerospace power and to bring itself from its low-wage past to a high-tech future. In 2011, China announced its twelfth Five-Year Plan, which included the commitment to spend a quarter of a trillion dollars to jump-start its aerospace industry. In *China Airborne*, James Fallows documents, for the first time, the extraordinary scale of China's project, making clear how it stands to catalyze the nation's hyper-growth and hyper-urbanization, revolutionizing China in ways analogous to the building of America's transcontinental railroad in the nineteenth century. Completing this remarkable picture, Fallows chronicles life in the city of Xi'an, home to 250,000 aerospace engineers and assembly-line workers, and introduces us to some of the hucksters, visionaries, entrepreneurs, and dreamers who seek to benefit from China's pursuit of aeronautical supremacy. He concludes by explaining what this latest demonstration of Chinese ambition means for the United States and for the rest of the world—and the right ways for us to respond.

**Conquering the Air Archibald Williams,2021-01-23** Revisit the romantic age of aeronautics when the rapid development of balloons, dirigibles and airplanes changed the world forever. Archibald Williams wrote this entertaining and informative journey through the early days of air travel for readers of all ages in 1926, covering the earliest ascents in balloons through the Wright Brothers, trans-Atlantic

flights. The special edition enlarged reprinting includes: - Enlarged 7 x 10 pages - Crisp digitally re-scanned and enhanced images - Bold new cover design - Author's original page layouts - Classic type font - English printing with illustration captions

Chapter by chapter Williams chronicles the feats and failures of those legendary pioneers of flight with enthusiasm and an eye towards the future, where he envisions a time when a machine will be able to alight vertically in a space no larger than the back garden of a small suburban villa, or on a flat roof. Enjoy an informative look at the earliest ascents of balloons, dirigibles, and the first crossings that made history. The rapid development of the mechanical airplane is covered with great interest, as is its application in commercial air travel, exploration, and warfare. For readers looking to enjoy a broad, illustrated overview of airplanes and the history of air travel, *Conquering the Air* is a delight to read. We shall devote our attention first to the origin of the spherical balloons and to the most notable voyages made in them. Next, we shall see how the balloon was altered in form, provided with motive power of its own, and converted from a mere gas-container and a self-directing aerial ship. Then follows an account of the experiments which led to the production of the first practical flying machine; to be succeeded by a series of chapters devoted to those flights, of successively increasing length, which, as first exemplifying the conquest of the air the grand scale, may justly be termed epoch-making.

Table of Contents:

**Airlines of the Jet Age** R.E.G. Davies,2016-08-24 Airlines of the Jet Age provides the first comprehensive history of the world's airlines from the early 1960s to the present day. It begins with an informative introductory chapter on the infancy of flight and the development of air-transport craft used during the First and Second World Wars, and then wings into the first Jet Age--the advent of jet airlines. It continues through the second Jet Age of wide-bodied aircraft, such as the Boeing 747 and DC-10, and closes with the introduction of the third Jet Age, which begins with the giant double-decked Airbus A380. This reference book is an unparalleled reference for aviation buffs, covering airlines around the globe and throughout the modern eras of human flight. The last book written by renowned airline historian R.E.G. Davies, Airlines of the Jet Age is the ultimate resource for information and insight on modern air transport.

Bombers Across Captain Edgar J. Wynn,2015-11-06 “THERE are more unsung heroes fighting in this war, I suppose, than in all the other wars of history rolled together. Explorers who have gone into remote regions in search of rare minerals and products of the jungle; men in the intelligence services who in this war have an infinitely more difficult job than ever before; paratroopers dropped behind the lines whom we never hear about; war correspondents who have suffered more casualties in proportion to their numbers than any other single group taking an active part at the various fronts; doctors, nurses, stretcher bearers, and ambulance drivers for whom the hazards are now far greater than ever; ground crews at advance air bases, and so on. The list is endless. But right at the head of it should go the flyers whose job it is to ferry planes across the oceans, and fly the endless stream of munitions that go by the sky route.”-Preface. This is the story of Captain Edward J. Wynn (born 1914) learned to fly at age 16, and barnstormed in the East and Middle West of the United States until the outbreak of World War II. In 1940 Wynn joined the Royal Canadian Air Force, where he was an instructor. After a few months, however, Wynn resigned his commission to take a job as a civilian ferry pilot. After forty-odd flights across the North Atlantic as a ferry pilot, he shifted to Pan American Airways where he ferried bombers to Africa by the South Atlantic Route. He later switched to TWA where he had the privilege of piloting Eleanor Roosevelt. After his stint with TWA he became a captain in the Air Transport Command.
