Survival Under Atomic Attack United States. Federal Civil Defense Administration, 1950

Survive the Bomb Eric G. Swedin, 2011-06-01 An examination of the American government's Cold War national defense measures and public communications regarding protection from nuclear disaster. The launch of Russia's Sputnik satellite in 1957 began an era where American citizens were haunted by fears of annihilation. Baby Boomers will remember Bert the Turtle, who instructed them how to "duck and cover." *Survive the Bomb* documents other U.S. government efforts to calm the collective psyche with nuclear survival handouts. These cheerful and naïve representations unintentionally inspired countless schoolchildren to question authority at an early age. This strange era reached its peak in 1962 with the Cuban Missile Crisis, lasting at least until the fall of the Berlin Wall. The nightmare still lingers today with the terrorist threat of dirty bombs and efforts by countries like Iran and North Korea to build their own nuclear arsenals. In addition to Civil Defense brochures and pamphlets from the period, *Survive the Bomb* includes: · Aftermath descriptions and casualty estimates at various distances from a nuclear blast · Civil Defense reports and recommendations to the United States Congress and President · Declassified nuclear wargame scenarios where the Department of Defense imagined the unimaginable · An introduction and commentaries by Cold War historian Eric G. Swedin

Survival Under Atomic Attack, 1951

Countdown to Atomgeddon James Howell, 2014-09-09 The story leading to the development and the first test of the atomic bomb is a complicated study in human endeavor under strict security and secrecy. During the later months of World War II in Europe, there was a growing concern that many of the scientists in Germany were in the process of developing a similar weapon that the United States was developing and eventually tested and deployed to end the war in the Pacific arena. Many scientists immigrated to other countries including the United States from Germany due to the forced Third Reich emigration policy. One German physicist in particular was helping to develop the weapon for the Third Reich. His name was Dr. Werner Heisenberg. There was speculation after the war had ended, and Dr. Heisenberg had died, that he had intentionally slowed the progress of the bombs development for Germany for fear that Hitler would attempt to dominate the rest of the world with its use. Information of the development on both sides of the war was apparently available even with the strict secrecy concerning the weapon through the use of spies. Many spies and informants were found on both sides of the conflict to include Russia. It was rumored that both Russia and Germany had informants working alongside the American scientists in Los Alamos and were responsible in helping Germany and Russia develop a weapon. Eventually, the German weapon was not completed as the Third Reich was more intent on developing rockets, jet engines, and was defeated in early May of 1945. Russia was second to develop a weapon and test-fired it in 1949. That was the beginning of the nuclear arms race. This book is written with the intent to show the humanistic side of the race to develop the first atomic bomb and, as accurately as possible, describe the local and regional implications of the bomb. Most characters are fictitious, and some of interviews are invented, but most of the details are summaries of many articles and books written about the bomb; and without their help, this book would not have been written. There may not have been a conspiracy to slow the progress in developing the American bomb, but most of the facts lead the writer to believe there was at least one. The brilliance of the leading military general in directing the Manhattan Project cannot be denied and was proven many times. Without his direct and indirect intervention in the project, it is conceivable that the world may now be speaking German. The conspiracy featured in this book could very well have been General Grove's most effective ruse in the race. Jumbo was created as a simple cover for the test

bomb, but many of the spies and saboteurs were led to believe that Jumbo was the test bomb and effectively directed attention away from the real bomb at Trinity Site.

Nuclear War, the Facts on Our Survival Peter Goodwin,1981 Factual information about nuclear power, the owners, number and locations of weapons, probable targets, the effects of radiation and their treatment, and self-protection.

How to Survive a Nuclear Attack U.S. Department of Defense,Federal Emergency Management Agency,2022-11-13 This book was written as a resource for an emergency response in case of a nuclear detonation. An interagency group of communications, radiation technical experts and doctors developed this edition which includes advised safety measures, key messages for the impacted community and the nation, anticipated questions and answers for the public in the immediate aftermath of a nuclear detonation, detailed first aid measures for injured persons and many more answers for the questions you didn't even knew you had.

Countdown to Atomgeddon - Europe James Howell,2015-04-24 The Second World War was reaching a deciding point in late 1944 when the United States formed teams of scientists and specialized military units in the hope of stopping Germany from developing a super weapon. These teams were responsible for capturing supplies of uranium and thorium raw materials and laboratory equipment used to produce the super bomb. Many of the assets that the Germans possessed were vital to help the United States and the Manhattan Project build the first atomic bomb. The teams of scientists and specialized military personnel were called into service as the Alsos missions sent to find and confine many of the prominent physicists and their research work. It was believed that the Germans were close to developing the bomb and would ensure Nazi world dominance. Several of the captured physicists were to become part of the Manhattan Project while others were returned to Germany after the war to rebuild the sciences.

Life Under a Cloud Allan M. Winkler,1999 Presents an account of the impact of the atomic bomb on American political and cultural life. This title delineates how fears of nuclear disaster have become a part of our culture. Tracing the debate over military and civilian uses of atomic power, it reveals the irony, anxiety, and official insanity of the atomic age.

Racing for the Bomb Robert Stan Norris,2002 Follows the World War II race to build the atomic bomb while profiling its top commander, documenting how Colonel Groves organized the collection of the necessary funds and materials while orchestrating solutions to thousands of technical problems.

The Nuclear Arms Race Paul P. Craig,John A. Jungerman,1990 This new edition of a very current interdisciplinary book covers both technical material and social issues, to give readers of all backgrounds a sense of the overall implications of the arms race. Weapons are the primary focus of the book, with the history of their development and nuclear politics included in the introductory chapters. There is a thorough discussion of global nuclear exchange, which considers the consequences of an all-out nuclear war, the psychological impact of the threat and actual nuclear war; the atomic bombings of Japan; and the biological effects of radiation from nuclear weapons.

Danger and Survival McGeorge Bundy,1990 Bundy, a former special assistant for national security under Presidents Kennedy and Johnson, explores the history of the nuclear bomb.

Weapons of Peace Craig E. Blohm,2003 Discusses the development of nuclear weapons, the race for nuclear supremacy, deployment of these weapons during the Cold War, and disarmament.

Nuclear War Survival Skills Brennan Mitchell,2022-10-10 This book will provide all the information you need to build a safe shelter for you and your loved ones; even if you don't have a basement or other options, you will succeed in surviving and preparing for the worst. If you want to gear up for surviving a nuclear war with the best supplies and personal protective devices, then scroll up and click the add to cart button. Learn here now: What likely nuclear targets are how to calculate your risk. The kinds of nuclear weapons that might be used and the damage they may cause. How to take advantage of the inverse square law. How to turn household items into radiation shielding. Tips to make your basement a better shelter. Why radiation exposure may not be a death sentence. It begins with a flash brighter than the sun. Trees, fences, and people immediately catch fire. The only reason you survive is because you run inside and dive into the cast-iron tub just as the shock wave arrives. You stumble to your lopsided front door and lookout on the burning ruin of your neighborhood. The deadly radioactive fallout is on its way. Should you stay in your wobbling house or run across town to the public library to shelter in its basement? This book will provide you with some answers.

Death in Life Robert Jay Lifton,2012-01-01 In Japan, hibakusha means the people affected by the explosion--specifically, the explosion of the atomic bomb in Hiroshima in 1945. In this classic study, winner of the 1969 National Book Award in Science, Lifton studies the psychological effects of the bomb on 90,000 survivors. He sees this analysis as providing a last chance to understand--and be motivated to avoid--nuclear war. This compassionate treatment is a significant contribution to the atomic age.
