The Voice of the Will is the Atomic Point, the Logos of the Silent All Helena Petrovna Blavatsky, William Quan Judge, 2022-01-01 Part 1. The Voice of the Will is the Atomic Point, the Logos of the Silent All, a veil concealing itself from the perception of lower minds. Part 2. The mediumistic state of passivity is dangerous, for passivity paralyzes the connection between man's lower and higher principles. Part 3. Life is identical with Will, and Will is a property of the Kabbalistic Astral Light. Part 4. There is no special organ of will, any more than there is a physical basis for the activities of self-consciousness. Part 5. Insights to the laws governing compulsion and obsession. Part 6. The Yogi performs his wonders by exercising his Will-Power and Thought. Part 7. Free will is a nameless Intelligent Force, guiding and shaping the imprisoned intelligence and force inherent in every atom of matter. Part 8. Hypnotism is the new scientific name for the old "superstition" variously called fascination and enchantment. Part 9. Will is the offspring of the Divine, Desire, the motive power of animal life.

Economics of Atomic Energy Mary Goldring, 2013-10-22 Economics of Atomic Energy covers the historical developments and major trends in atomic energy and its utilization. This book is organized into three parts encompassing 10 chapters that emphasize the economic aspect of nuclear power. The first part provides an overview of the status of atomic industry, from uranium supply to production and uses of fissile materials. This part looks into the accurate measurement of the national incomes that have pressed ahead with atomic development and how much of the national resources have diverted to atomic research. The second part deals first with the increasing demand for cheaper energy, followed by the assessment of factors affecting the costs of nuclear reactor. The third part discusses Britain's atomic investment on research. This part also considers the other countries' atomic industry methods, including U.S.A., France, and Germany. This book will be of value to nuclear physicists, economists, and policy makers.

From an Ontological Point of View John Heil, John Fergusson Heil, 2003-05 Is the world hierarchically arranged, incorporating 'levels' of reality? What is the nature of objects and properties? What does 'realism' about ordinary objects or states of mind demand? When an assertion is true, what makes it true? Are natural properties best regarded as qualities or powers or some combination of these? What are colours? What explains the 'projective' character of intentionality? What is the nature of consciousness, and what relation do conscious experiences bear to material states and processes? From an Ontological Point of View endeavours to provide answers to such questions through an examination of ground-floor issues in ontology. The result is an account of the fundamental constituents of the world around us and an application of this account to problems dominating recent work in the philosophy of mind and metaphysics. The book, written in an accessible, non-technical style, is intended for non-specialists as well as seasoned metaphysicians.

Basic Principles of Calculations in Chemistry Ayorinde Awonusi, 2010 Basic Principles of Calculations in Chemistry is written specifically to assist students in understanding chemical calculations in the simplest way

possible. Chemical and mathematical concepts are well simplified; the use of simple language and stepwise explanatory approach to solving quantitative problems are widely used in the book. Senior secondary school, high school and general pre-college students will find the book very useful as a study companion to the courses in their curriculum. College freshmen who want to understand chemical calculations from the basics will also find many of the chapters in this book helpful toward their courses. Hundreds of solved examples as well as challenging end-of-chapter exercises are some of the great features of this book. . Students studying for SAT I & II, GCSE, IGCSE, UTME, SSCE, HSC, and other similar examinations will benefit tremendously by studying all the chapters in this book conscientiously.

Exploring Engineering Philip Kosky,Robert Balmer,Robert T. Balmer,William D. Keat,George Wise,2012-07-25 Suitable for those interested in exploring various fields of engineering and learning how engineers work to solve problems, this title explores the world of engineering by introducing the reader to what engineers do, the fundamental principles that form the basis of their work, and how they apply that knowledge within a structured design process.

Scientific Analysis of Cultural Heritage Objects Michael Wiescher,Khachatur Manukyan,2020-08-31 The characterization of cultural heritage objects becomes increasingly important for conservation, restoration, dating, and authentication purposes. The use of scientific methods in archaeometry and conservation science has led to a significant broadening of the field. Scientific analysis of these objects is a challenging task due to their complex composition, artistic and historical values requiring the use of minimally invasive and nondestructive analytical procedures. This textbook summarizes scientific methods that are currently used to characterize objects of cultural heritage and archaeological artifacts. This book provides a brief description of the structure of matter at the molecular, atomic, and nuclear levels. Furthermore, it discusses the chemical and physical nature of materials from the molecular to the atomic and nuclear level as determined by the principles of quantum mechanics. Important aspects of natural and anthropogenic radioactivity that play a critical role for some of the analytical techniques are also emphasized. The textbook also provides principals and applications of spectroscopic methods for characterization of cultural heritage objects. It describes the technologies with specific examples for utilization of spectroscopic techniques in the characterization of paintings, books, coins, ceramics, and other objects. Analytic approaches that employ isotopes and determination of isotope ratios will be reviewed. General principles of imaging techniques and specific examples for utilization of these methods will also be summarized. In the later part of the book, a number of scientific techniques for the age determination of cultural heritage material and archaeological artifacts will be presented and discussed with specific examples.

Beyond Decommissioning Michele Laraia,2019-06-08 *Beyond Decommissioning: The Reuse and Redevelopment of Nuclear Installations* presents the most up-to-date research and guidance on the reuse and redevelopment of nuclear plants and sites. Consultant Michele Laraia extensively builds upon experience from the redevelopment of non-nuclear industrial sites, a technical field that has considerably predated nuclear applications, to help the reader gain a very thorough and practical understanding of the redevelopment opportunities for decommissioned nuclear sites.

Laraia emphasizes the socioeconomic and financial benefits from very early planning for site reuse, including how to manage the decommissioning transition, anticipate financial issues, and effectively utilize available resources. With an increasing number of decommissioning projects being conducted worldwide, it is critical that knowledge gained by experts with hands-on experience is passed on to the younger generation of nuclear professionals. Besides, this book describes the experiences of non-nuclear organizations that have reutilized the human, financial, and physical site assets, with adaptations, for a new productive mission, making it a key reference for all parties associated with nuclear operation and decommissioning. Those responsible for nuclear operation and decommissioning are encouraged to incorporate site reuse within an integrated, beginning-to-end view of their projects. The book also appeals to nuclear regulators as it highlights more opportunities to complete nuclear decommissioning safely, speedily, and in the best interests of all concerned parties. Includes lessons learned from worldwide case studies of reuse and repurposing of nuclear plants from both the nuclear and non-nuclear industries Provides practical guidance on a broad-spectrum of factors and opportunities for nuclear decommissioning Identifies the roles and responsibilities of parties involved, including nuclear operators, regulators and authorities, land planners and environmentalists

Exploring Engineering Robert Balmer, William Keat, 2009-09-05 Exploring Engineering: An Introduction to Engineering and Design, Second Edition, provides an introduction to the engineering profession. It covers both classical engineering and emerging fields, such as bioengineering, nanotechnology, and mechatronics. The book is organized into two parts. Part 1 provides an overview of the engineering discipline. It begins with a discussion of what engineers do and then covers topics such as the key elements of engineering analysis; problems solving and spreadsheet analyses; and the kinds, conversion, and conservation of energy. The book also discusses key concepts drawn from the fields of chemical engineering; mechanical engineering; electrical engineering; electrochemical engineering; materials engineering; civil engineering; engineering kinematics; bioengineering; manufacturing engineering; and engineering economics. Part 2 focuses on the steps in the engineering design process. It provides content for a Design Studio, where students can design and build increasingly complex engineering system. It also presents examples of design competitions and concludes with brief remarks about the importance of design projects. Organized in two parts to cover both the concepts and practice of engineering: Part I, Minds On, introduces the fundamental physical, chemical and material bases for all engineering work while Part II, Hands On, provides opportunity to do design projects An Engineering Ethics Decision Matrix is introduced in Chapter 1 and used throughout the book to pose ethical challenges and explore ethical decision-making in an engineering context Lists of Top Engineering Achievements and Top Engineering Challenges help put the material in context and show engineering as a vibrant discipline involved in solving societal problems New to this edition: Additional discussions on what engineers do, and the distinctions between engineers, technicians, and managers (Chapter 1) New coverage of Renewable Energy and Environmental Engineering helps emphasize the emerging interest in Sustainable Engineering New discussions of Six Sigma in the Design section, and expanded material on writing technical reports Re-organized and updated chapters in Part I to more closely align with specific engineering disciplines new end of chapter exercises throughout the book

Adventures and Peregrinations of the Metaphysical Atom Helena Petrovna Blavatsky, 2019-09-17 Fohat (Cosmic Electricity), by infusing energy into primordial matter, electrifies into life and scatters into atoms. It is through Fohat that the ideas of the Universal Mind are impressed upon matter. Occultism asserts that Electricity is Matter, not mere motion. Force, or Energy, may be better names for it. Electricity is "immaterial" only in the sense that its molecules are not subject to perception and experiment; yet, Occultism says it is atomic, therefore material. Fohat is connected with Vishnu, from the root vish, "to pervade," therefore, he is called the Pervader and the Manufacture because he shapes the atoms from crude material. From the first awakening of Kosmos to a new Day of Brahmā or Motion, which even during the periods of Rest (Night) pulsates and thrills through every slumbering atom, assuming an ever-growing tendency to circular movement. The gyratory movement of atoms and spheres exists from eternity. The Elementary Germs with which Fohat fills the Universe from the "Heaven of Mind," are the atoms of Science and the monads of Leibniz. A perpetual exchange of atoms is taking place in Space, thus changing their combining equivalents on every planet. Atoms enter into new forms of existence, undreamt of, and incognisable to, physical Science. The essence of cometary matter, for instance, is totally different from any of the chemical or physical characteristics with which the greatest chemists and physicists of the earth are familiar with. Enshrined in its pristine state within the bosom of the Eternal Mother, every atom born beyond the threshold of her realm is doomed to incessant differentiation. If we follow the atoms and molecules of the lower plane in their transformation upwards, these will come to a point where they pass altogether beyond the range of our faculties. As the spiritual Monad is One, Universal, Boundless and Impartite, whose rays form what we, in our ignorance, call the "Individual Monads" of men, so the Mineral Monad – being at the opposite point of the circle – is also One, and from it proceed the countless physical atoms, which Science is beginning to regard as individualized. Instead of saying a Mineral Monad, the more correct phraseology in physical science which differentiates every atom would have been to call it the Monad manifesting in that form of Prakriti called the Mineral Kingdom. The atom, as represented in the ordinary scientific hypothesis, is not a particle of something, animated by a psychic something, destined after aions to blossom as a man. It is a concrete manifestation of the Universal Energy which itself has not yet become individualized, i.e., a sequential manifestation of the One Universal Monad. As the monads are uncompounded things, it is the spiritual essence which vivifies them in their degrees of differentiation, which properly constitutes the Monad – not the atomic aggregation, which is only the vehicle and the substance through which thrill the lower and the higher degrees of Intelligence. Every form on earth and in Space strives towards self-formation following the model placed for it in the "Heavenly Man." The atom's evolution and involution, its external and internal growth and development, have all one and the same object – Man or Humanity at large. Not only the chemical compounds are the same, but the same infinitesimal invisible lives compose the atoms of the bodies of the mountain and the daisy, of man and the ant, of the elephant and of the tree which shelters him from the sun. Each particle, whether organic or inorganic, is a life. Each atom

may reach, by "self-induced and self-devised efforts," that plane where it re-becomes the One Unconditioned All. Starting upon the long journey immaculate; descending more and more into sinful matter, and having connected himself with every atom in manifested space – the Pilgrim, having struggled through and suffered in every form of life and being, is only at the bottom of the valley of matter, and half through his cycle, when he has identified himself with Humanity at large. This, he has made in his own image. Myths are now proved to be fables, just in proportion as we misunderstand them; truths, in proportion as they were once understood. The Ether of Science, the Illus of Berossus, the Protyle of Sir William Crookes, are one the same, primordial matter out of which the "Builders," following the plan traced out for them in the Divine Thought, fashion the systems in Cosmos. Such grand metaphysical concepts can no longer be brushed aside as myths. Materialism and the malignancy of Scepticism are two evils that must remain in the world as long as man has not quitted his present gross form to don the one he had during the first and second Root-Races of this Round. The atom of the chemist, the atom of the physicist, that of the mathematician, and that of the metaphysician, have absolutely nothing in common but the name! Each lower mind constructs an atom to suit his own fancy, in order to explain some special phenomenon with which he is particularly concerned. The primordial Atom belongs wholly to the domain of metaphysics. It is an entified abstraction and has nought to do with physics, strictly speaking, as it can never be brought to the test of retort or balance. The whole Universe focuses on a single metaphysical point. Atoms, Ether, and the Evolution itself of modern Science are based on the conceptions of archaic nations. "Conceptions" for the profane, under the shape of allegories; plain truths taught during the Initiations of the Elect. Force is not in the Atom: it is in the space which separates atoms from each other. Matter exists in two conditions, latent or undifferentiated, and patent or differentiated. Atomic, however, is a substance not subject to the qualities of matter, from which it is quite different. The Matter of the Esoteric Doctrine is eternal because it is Unevolved Cause. Eternal Matter becomes atomic only periodically. In the language of the Initiates, Atoms are Souls and Intelligences. The atom imagined by modern Science, now called "energy," is inseparable from Spirit. Stones, minerals, rocks, and even chemical atoms are simply organic units in profound lethargy. Their coma comes to an end when their inertia becomes activity. Replace the chemical terms molecule, atom, particle, etc., by the words Hosts, Monads, Devas, etc., and one might think the genesis of gods, the primeval evolution of manvantaric Intelligent Forces, was being described. Were Leibniz' and Spinoza's systems to be reconciled, the essence of Esoteric Philosophy would be made to appear. From the shock of the two, as opposed to the Cartesian system, emerge the Truths of the Archaic Doctrine and the Spirit which is at the heart of the Occult Doctrine and Thought. Though both admitted but one real Entity, while Spinoza made it impersonal and indivisible, Leibniz divided his personal Deity into a number of divine and semi-divine Beings. Spinoza was a subjective, Leibniz an objective Pantheist, yet both were great philosophers in their intuitive perceptions. To the follower of the true Eastern Archaic Wisdom, to him who worships in spirit nought outside the Absolute Unity, that ever-pulsating great Heart that beats throughout, as in every atom of nature, each such atom contains the germ from which he may raise the Tree of Knowledge, whose fruits will give life eternal and not physical life alone. Spirit is abstract light, uncreated, latent in every atom, in whose profound and sacred repose all motion must cease for ever. Latent Electricity becomes patent under certain conditions. The "elementary atoms" are compound bodies that contain primordial globules, the gross encasement of the still finer atom-spark – the spark of Life and source of Electricity – which is matter, still. When the Life-energy is active in the atom, that atom is organic; when dormant or latent, "inorganic." The distinction between the two states is arbitrary and spurious. Life is as much present in the inorganic as in the organic matter.

Matter, in atomizing, differentiates. Restore the differentiated matter to the status quo ante, and there is no difficulty in seeing how it can pass through the interstices of dense substance in its differentiated state, as we easily conceive of the travel of electricity and other forces through their conductors. There are no “blind” forces in nature. Every atom in the universe is permeated with Universal Intelligence, from the latent spark in the mineral up to the quasi-divine light in man’s brain. Matter and force are ever allied. Matter without force, and force without matter, are inconceivable. Every atom is endowed with consciousness, yet the potential of man’s ability to control the cells and atoms of his body, have not been honoured with the imprimatur of the popes of modern science. Every atom is a little universe of its own. Every cell and organ in the human body has a brain and memory of its own, and thus also, experience and discriminative powers. Physical Science calls “atoms” that which the Occultists regard as particles or molecules. The real atoms are the inner principles and the intelligent, spiritual guides of the cells, and the particles they inform. Atom is not the smallest constituent unit of matter, not even a mathematical point. It is an immutable Entity, a reality within an appearance – the molecule being in Occult Philosophy but a figment of maya-illusion. It may be described as a compact or crystallized point of Divine Energy and Ideation. The Hermetic Divine Fire is the fons et origo of life, that Uncreated Spirit which starts from, and is immediately reabsorbed into primordial matter. It is the ultimate essence of every atom whether pertaining to animate or inanimate, organic or inorganic substance. Before that Spirit is immersed into matter, it is self-existent and independent of matter. The real Atom does not exist on the material plane, it is beyond space and time. Atom, in its eternal state, is invisible even to the eye of an Archangel. Brahmā is called Atom, because we have to imagine it as a mathematical point which, however, can be extended to Absoluteness. He who would be an occultist must not separate either himself or anything else from the rest of creation or non-creation. For, the moment he distinguishes himself from even a vessel of dishonour, he will not be able to join himself to any vessel of honour. He must think of himself as an infinitesimal something, not even as an individual atom, but as a part of the world-atoms as a whole – or become an illusion, a nobody, and vanish like a breath leaving no trace behind.
