Environmental and Energy Law Karen Makuch,Ricardo Pereira,2012-10-01 Despite bringing prosperity, industrialisation generally leads to increasing levels of pollution which has a detrimental impact on the environment. In response, legislation which seeks to control or prevent such impact has become common. Similarly, climate change and energy security have become major drivers for the regulatory regimes that have emerged in the energy field. Given the global or regional scope of many environmental problems, international cooperation is often necessary to ensure such legislation is effective. The EU and the UK have contributed to the development of the environmental and energy law regimes currently in force, spanning across international, transnational and national levels. At the same time, practical responses to environmental and energy problems have largely been the focus of engineers, scientists and other technical experts. Environmental & Energy Law attempts to bridge the knowledge gap between legal developments designed to achieve environmental and/or energy-related objectives and the practical, scientific and technical considerations applicable to the same environmental problems. In particular, it attempts to convey a broad range of topical issues in environmental and energy law, from climate and energy regulation, technology innovation and transfer, to pollution control, environmental governance and enforcement. In addition the book outlines key sector specific legal regimes (including water, waste and air quality management), focusing on issues or topics that are particularly relevant to both environmental and energy lawyers, and engineering, science and technology-oriented professionals and students. In this vein, the book guides the reader on some basic practical applications of the law within scientific, engineering and other practical settings. The book will be useful to all those working or studying in the environmental or energy arena, including law students, legal professionals, engineering and science students and professionals. By adopting a multi-disciplinary approach to environmental and energy law, the book embraces all readerships and helps to address the often thorny problem of communication between scientists, engineers, lawyers and policy-makers.

By examining the disputes, accomplishments and/or setbacks experienced by women in political spaces, it underscores feminist intersections of political communication in Africa. Education, Values and Ethics in International Heritage Jeanette Atkinson,2016-04-29 The changing and evolving relationship between museums and communities, Indigenous, ethnic and marginalized, has been a primary point of discussion in the heritage sector in recent years. Questions of official and unofficial heritage, whose artefacts to collect and exhibit and why, have informed and influenced museum practice. Developing from this, a key issue is whether it is possible to raise awareness of differing cultural perspectives,

values and beliefs and incorporate this into the education and training of heritage professionals, with the aim of making 'cultural awareness' an integrated and sustainable core part of future heritage training and practice. This book discusses perceptions of values and ethics, authenticity and significance, and documents the historical, heritage and education context in North America, Scandinavia and the United Kingdom, with a particular emphasis on Aotearoa New Zealand. The author explores whether it is possible to learn respect for differing cultural perspectives through the undertaking of educational programmes, identifies various approaches that could complement the development of students and professionals in the cultural heritage and preservation sectors, and offers a means of actively engaging with cultural and professional values through a Taxonomy for Respecting Heritage and Values.
