The Constitution and National Security Howard E. Shuman, Walter R. Thomas, 2002-05 The founders of our republic were determined to establish a government that protected the rights of the individual within a free society, a system that improved upon European designs. Newly independent, the Americans formed a government under the Articles of Confederation. As a loose confederation of states, however, the growing nation had a weak national voice and little international status. After only ten years under this system, the states recognized the need for more national power and drafted the U. S. Constitution. The goal, again, was to protect the individual's natural rights through the creation of an energetic national government. Thus the U. S. Constitution was written, with compromises, and submitted to the people for their ratification. After vigorous public debate, this document became the fundamental law of the land. The Constitution has endured with few additional amendments for more than two centuries - but not without continuing debate. In this newest contribution to the writings of constitutional scholars, papers address the President's war powers, the role of Congress in foreign policy, and other questions of interpreting the Constitution in the modern era. These current issues have at their core the same fundamental questions that animated debate during the Constitutional Convention in 1787: how best to protect society while guarding the rights of the individual, how best to give sufficient power to the executive while guarding against abuse of power. But even as we debate, we celebrate our Constitution, a document forged of ingrained American beliefs that our republic can be secured and the rights of the individual safeguarded. Vice Admiral J. A. Baldwin, United States Navy President, National Defense University

The Process of Question Answering Wendy G. Lehnert, Yale University. Department of Computer Science, 1977 Problems in computational question answering assume a new perspective when question answering is viewed as a problem in natural language processing. A theory of question answering has been proposed which relies on ideas in conceptual information processing and theories of human memory organization. This theory of question answering has been implemented in a computer program, QUALM, currently being used by two story understanding systems to complete a natural language processing system which reads stories and answers questions about what was read. The processes in QUALM are divided into 4 phases: (1) Conceptual categorization which guides subsequent processing by dictating which specific inference mechanisms and memory retrieval strategies should be invoked in the course of answering a question; (2) Inferential analysis which is responsible for understanding what the questioner really meant when a question should not be taken literally; (3) Content specification which determines how much of an answer should be returned in terms of detail and elaborations, and (4) Retrieval heuristics which do the actual digging to extract an answer from memory.

The Impact of Publicity on Corporate Offenders Brent Fisse, John Braithwaite, 1984-06-30 Uncertainty surrounds the use of publicity as a means of controlling corporate crime. On the one hand, some agree with Justice Brandeis's dictum that light is the best of disinfectants...the most efficient policeman. On

the other hand, many believe that corporations' internal affairs are effectively shrouded with a thick fog that prevents the light of public scrutiny from reaching them. *The Impact of Publicity on Corporate Offenders* is the first study to go beyond the rhetoric, through an examination of corporate experience. Fisse and Braithwaite have carried out a qualitative inquiry concerning 17 large corporations involved in publicity crises. Based mainly on interviews, the inquiry includes company employees and former employees, union officials, officers of government regulatory agencies, competitors, independent accountants, government prosecutors, public interest activists, judicial officers, stockbrokers, and other experts.

Evolutionary Bioinformatics Donald R. Forsdyke, 2010-11-11 Books on bioinformatics which began appearing in the mid 80s primarily served gene-hunters, and biologists who wished to construct family trees showing tidy lines of descent. Given the great pharmaceutical industry interest in genes, this trend has continued in most subsequent texts. These deal extensively with the exciting topic of gene discovery and searching databases, but hardly consider genomes as information channels through which multiple forms and levels of information, including genic information, have passed through the generations.

On the Short Waves, 1923-1945 Jerome S. Berg, 2007-03-28 As radio developed in the early 1920s, the focus for most people was the AM band and stations such as KDKA, the first broadcast station. There was, however, another broadcast method that was popular among many early enthusiasts--shortwave radio. As is true today, the transmission of news and entertainment programs over shortwave frequencies permitted reception over great distances. For many in America and beyond, shortwave was an exciting aspect of the new medium. Some still tune the shortwave bands to enjoy the programming. Others pursue broadcasts for the thrill of the hunt. This book fully covers shortwave broadcasting from its beginning through World War II. A technical history examining the medium's development and use tells the story of a listener community that spanned the globe. Included are overviews of the primary shortwave stations operating worldwide in the 1930s, along with clubs and competitions, publications and prizes. A rich collection of illustrations includes many QSLs, the cards that stations sent to acknowledge receipt of their transmissions and that are much prized by long-distance collectors.

The Aptamer Handbook Sven Klussmann, 2006-08-21 In *The Aptamer Handbook*, leading scientists from academia as well as biotech and pharma companies introduce the revolutionary concept of designing RNA and DNA oligonucleotides with novel functions by in vitro selection. These functions comprise high affinity binding (aptamers), catalytic activity (ribozymes and deoxyribozymes) or combinations of binding and catalytic properties (aptazymes). Basic concepts and technologies describing in detail how these functional oligonucleotides can be identified are presented. Numerous examples demonstrate the versatility of in vitro selected oligonucleotides. Special emphasis has been put on a section that shows the broad applicability of aptamers, e. g. in target validation, for analytics, or as new therapeutics. This first overview in the field is of prime interest for a broad audience of scientists both in academia and in industry who wish to expand their knowledge on the potential of new oligonucleotide functions and their applications.

Mapping and Sequencing the Human Genome National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Mapping and Sequencing the Human Genome, 1988-01-01 There is growing enthusiasm in the scientific community about the prospect of mapping and sequencing the human genome, a monumental project that will have far-reaching consequences for medicine, biology, technology, and other fields. But how will such an effort be organized and funded? How will we develop the new technologies that are needed? What new legal, social, and ethical questions will be raised? *Mapping and Sequencing the Human Genome* is a blueprint for this proposed project. The authors offer a highly readable explanation of the technical

aspects of genetic mapping and sequencing, and they recommend specific interim and long-range research goals, organizational strategies, and funding levels. They also outline some of the legal and social questions that might arise and urge their early consideration by policymakers.

Game of Spies Paddy Ashdown,2017-05-22 A riveting three-way spy story set in occupied France. 'Game of Spies' tells the story of a lethal spy triangle between 1942 and 1944 in Bordeaux - and of France's greatest betrayal by aristocratic and right-wing Resistance leader Andre Grandclement. The story centres on three men: one British, one French and one German and the duel they fought out in an atmosphere of collaboration, betrayal and assassination, in which comrades sold fellow comrades, Allied agents and downed pilots to the Germans, as casually as they would a bottle of wine. It is a story of SOE, treachery, bed-hopping and executions in the city labelled 'la plus collaboratrice' in the whole of France.
