The first problem is concerned with a complex technical system: a special carousel based high-speed storage system - Rotastore. It is shown that this logistic problem leads to an NP-hard Batch Presorting Problem (BPSP) which is not easy to solve optimally in offline situations. We consider a polynomial case and develop an exact algorithm for offline situations. Competitive analysis showed that the proposed online algorithm is 312-competitive. Online algorithms with lookahead improve the online solutions in particular cases. If the capacity constraint on additional storage is neglected the problem has a totally unimodular polyhedron.
