This fully updated second edition addresses loss control auditing from the perspectives of workplace safety, physical security, and fire risks. Subsidiary organizations and their integration into the auditing process, such as the areas of contractor management and temporary worker safety are covered in detail. The book discusses the integration of qualitative and quantitative measures in an effort to arrive at a more holistic scoring mechanism to assess organizational performance. In all, the depth of material presented in this thorough book showcases how to develop and execute a loss control management system audit program to a high quality. Auditing in the Food Industry M Dillon,C Griffith,2001-07-12 The food industry faces an unprecedented level of scrutiny. Consumers are not only concerned with the safety and quality of food products but also the way in which they are produced. At the same time the food industry has developed new ways of assuring appropriate standards for its products and their methods of production, developing systems such as TQM and HACCP to identify and manage key steps in production. These new methods require new skills in auditing. Auditing in the food industry provides an authoritative guide to the range of standards and the auditing skills they demand. Part one sets the scene with an introductory chapter reviewing developments in standards affecting the food industry. There then follows chapters on how retailers audit their suppliers and how governments have moved from a traditional inspection role to one of 'regulatory verification' with its emphasis on auditing the robustness of a business's own systems for managing safety and quality. Part two examines the key aspects of safety and quality. A first chapter reviews the ways retailers assess supplier HACCP systems. There is then a chapter reviewing TQM systems that provides a context for a discussion of auditing techniques for HACCP-based quality systems. A final chapter looks at standards governing the analytical methods used in safety and quality control. Part three considers newer standards that are becoming increasingly important in the food industry. There are chapters on benchmarking an organisation against others as a way of improving performance, auditing the impact of food processing operations on the environment and auditing organic food processing. Auditing in the food industry is a valuable guide to the range of standards facing the food industry and the ways it can audit, and thus improve the quality of its performance.
