*Assyrian History Culture and Traditions* Venesia Yacoub, 2021-12-22 This book is the first of its kind and takes an in-depth look at one of the oldest nations in the world, while documenting various traditions and rituals tracing Assyrian lineage from cuneiform, the beginning of time and writing, until now. Their rich history has engaged various archaeological groups throughout the world to visit their homelands and conduct various excavations, which has led to incredible ancient discoveries that have been housed in universities and museums for centuries. Their heartland is called the Cradle of Civilization, and their legacy has earned the prestigious name of History of the World. They were one of the first people to convert to Christianity and have been mentioned in the Bible and various books throughout time. This book highlights information on their artifacts, including one of the seven wonders of the ancient world, the Hanging Gardens. We also take an insider look at some topics that have been extensively chronicled and studied, such as religion, the legendary Winged Bulls, the famous Tree of Life, and angels.

**Mathematica®: A Problem-Centered Approach** Roozbeh Hazrat, 2016-01-04 This textbook introduces the vast array of features and powerful mathematical functions of Mathematica using a multitude of clearly presented examples and worked-out problems.

Each section starts with a description of a new topic and some basic examples. The author then demonstrates the use of new commands through three categories of problems - the first category highlights those essential parts of the text that demonstrate the use of new commands in Mathematica whilst solving each problem presented; - the second comprises problems that further demonstrate the use of commands previously introduced to tackle different situations; and - the third presents more challenging problems for further study. The intention is to enable the reader to learn from the codes, thus avoiding long and exhausting explanations. While based on a computer algebra course taught to undergraduate students of mathematics, science, engineering and finance, the book also includes chapters on calculus and solving equations, and graphics, thus covering all the basic topics in Mathematica. With its strong focus upon programming and problem solving, and an emphasis on using numerical problems that do not need any particular background in mathematics, this book is also ideal for self-study and as an introduction to researchers who wish to use Mathematica as a computational tool. This new edition has been extensively revised and updated, and includes new chapters with problems and worked examples.

**Oriental Influence in the Aegean and Eastern Mediterranean Helmet Traditions in the 9th-7th Centuries B.C.** Tamás Dezső, 1998 This monograph is intended to contribute to the study of the orientalizing phase in archaic Greece, through a systematic examination of the evidence provided by copper alloy and iron helmets. Dezső also provides a framework for other material indicators of eastern contacts with Greece, by defining four distinct levels of orientalization as the basis of his analysis.
