Geophysik II / Geophysics II ,2012-12-06 45 downwards because ( $j$  on the average increases with height; but this conclusion does not follow from (18.3) when the dependency of  $K_c$  upon  $z$  is taken into consideration. s 2 ERTELL and PRIESTLEY and SWINBANK have shown that the upward eddy flux of sensible heat must be larger than indicated by (18.3), because this formula does not account for the fact that rising eddies are systematically warmer than sinking eddies because of the effect of buoyancy. The reader is referred to the reviews by SUTTON [22], [23] and PRIESTLEY and SHEP PARD [15] for further details concerning eddy-flux of heat and turbulent diffusion. 19. RICHARDSON'S criterion. The right-hand side of (15.10) represents the rate of production of eddy energy. The last term represents energy loss by dissipation; in order that the eddy energy shall be maintained, it is therefore necessary that  $P \operatorname{div} V - (\nabla V \cdot \nabla v) > 0$ .

Sonic Flux Christoph Cox,2018-11-02 From Edison's invention of the phonograph through contemporary field recording and sound installation, artists have become attracted to those domains against which music has always defined itself: noise, silence, and environmental sound. Christoph Cox argues that these developments in the sonic arts are not only aesthetically but also philosophically significant, revealing sound to be a continuous material flow to which human expressions contribute but which precedes and exceeds those expressions. Cox shows how, over the course of the twentieth and twenty-first centuries, philosophers and sonic artists have explored this "sonic flux." Through the philosophical analysis of works by John Cage, Maryanne Amacher, Max Neuhaus, Christian Marclay, and many others, *Sonic Flux* contributes to the development of a materialist metaphysics and poses a challenge to the prevailing positions in cultural theory, proposing a realist and materialist aesthetics able to account not only for sonic art but for artistic production in general.

**Light Scattering by Ice Crystals** Kuo-Nan Liou, Ping Yang, 2016-10-06 This research volume outlines the scientific foundations that are central to our current understanding of light scattering, absorption and polarization processes involving ice crystals. It also demonstrates how data from satellite remote sensing of cirrus clouds can be combined with radiation parameterizations in climate models to estimate the role of these clouds in temperature and precipitation responses to climate change. Providing a balanced treatment of the fundamentals and applications, this book synthesizes the authors' own work, as well as that of other leading researchers in this area. Numerous illustrations are included, including three-dimensional schematics, to provide a concise discussion of the subject and enable easy visualization of the key concepts. This book is intended for active researchers and advanced graduate students in atmospheric science, climatology, and remote sensing, as well as scholars in related fields such as ice microphysics, electromagnetic wave propagation, geometric optics, radiative transfer and cloud-climate interactions.

**The Permanence of the Transient** Camila Maroja, Caroline Menezes, Fabrizio Poltroniere, 2014-06-26 How should one approach the notion of the precarious in art – its meanings and its outcomes? Its presence in artistic practices may be transient, yet it instigates permanent changes in the production, discourse, and perception of art. The Permanence of the Transient: Precariousness in Art gathers essays that examine the traces and implications of precariousness in contemporary art, and lays a foundation for a thoughtful study of its emergence in related fields throughout the 20th and 21st centuries. The different perspectives represented in this volume touch on art history and theory, curatorial practice, media art, philosophy, language, and transnational studies, and highlight artists' narratives. Together, these interdisciplinary essays locate precariousness as an undercurrent in contemporary art and a connective tissue across diverse areas of knowledge and everyday life.
