Guide to 3D Photography Edward Mitchell, MS, MBA,2013-11-04 Guide to 3D Photography is for the beginning 3D photographer, showing how to get started, how to process images on your computer or tablet, and how to view your 3D photographs. You can begin shooting 3D photos using one camera or two, or using integrated 3D cameras. This is a hands-on guide with step-by-step examples for shooting, processing and displaying your 3D images. This guide is intended for the novice to mid-skill level 3D enthusiast; this guide is not targeted at experienced 3D photographers. Anyone can shoot and process 3D - this book shows you how. Using free software that runs on Windows-based personal computers, or free or low-cost apps for iPad or Android tablets and smart phones, your stereo photographs can be turned into viewable 3D photos for display on your computer, displayed online or printed on paper or turned in to glasses free 3D prints (for a service fee). While 3D TVs and monitors provide the best viewing experience, you can get started with free or very low cost filtered glasses. You'll even learn how to create 3D photos that can be viewed without any glasses or special hardware. NOT RECOMMENDED for Black & White or gray scale e-readers as the 3D color photographs in the books can not be viewed - however the photos are available separately online. RECOMMENDED FOR COLOR E-READERS including color tablets and e-reader software on tablets, notebooks and desktop computers. Guide to 3D Photography covers learning how to see in 3D to achieve the best 3D effects while avoiding common 3D problems that can ruin 3D photos or cause eyestrain for viewers. The book also covers methods for shooting 3D with one camera, with two cameras, or with commercially made, special purpose 3D cameras, and viewing 3D photos on 3D monitors. Advanced topics include the concept of a 3D depth box, the importance of the spacing between the left and right image lenses and how that impacts depth captured in the photograph, advanced image processing techniques and methods of creating wiggle animated 3D images, as well as red/cyan, green/magenta, yellow/blue and amber/blue anaglyphs. 183 PDF pages. Photography for Architects Martine Hamilton Knight, 2024-01-19 ***Shortlisted for the Architectural Book Awards 2024*** We live in a world driven by images, but with so much visual noise, is anyone really looking? How does an architect ensure their portfolio is within view of the right audience? Photographs are still as vital to architectural practice as they ever were. However, creation and circulation, once in the hands of skilled professionals, is now perceived as being 'free' and within easy reach of all. But where is the clarity? What is the message? By setting out the case for curated image making, considered photography may again be placed at the centre of architectural marketing strategies. Photography for Architects guides the reader through various topics: from establishing a visual brand and sharing images online, to producing content in-house and commissioning professionals. It explores the still and moving image, creating books and exhibitions for legacy value, compiling award entries, and engaging with trade press. Little understood aspects regarding legal rights and obligations, ethics, copyright, and licensing images for use are discussed in clear language. Multiple photographic examples and conversations with international practitioners highlight the various themes throughout. Written by a working architectural photographer whose life has been spent in commercial practice, this easy-to-read, richly illustrated guide is essential reading for architects and designers alike who are working with images and image makers.

Medical Imaging and Augmented Reality Guang-Zhong Yang,Tianzi Jiang,2004-08-11 Rapid technical advances in medical imaging, including its growing application to drug/gene therapy and invasive/interventional procedures, have attracted significant interest in close integration of research in life sciences, medicine, physical sciences and engineering. This is motivated by the clinical and basic science research requirement of obtaining more detailed physiological and pathological information about the body for establishing localized genesis and progression of diseases. Current research is also motivated by the fact that medical imaging is increasingly moving from a primarily diagnostic modality towards a therapeutic and interventional aid, driven by recent advances in minimal-access and robotic-assisted surgery. It was our great pleasure to welcome the attendees to MIAR 2004, the 2nd International Workshop on Medical Imaging and Augmented Reality, held at the Xia-shan (Fragrant Hills) Hotel, Beijing, during August 19-20, 2004. The goal of MIAR 2004 was to bring together researchers in computer vision, graphics, robotics, and medical imaging to present the state-of-the-art developments in this ever-growing research area. The meeting consisted of a single track of oral/poster presentations, with each session led by an invited lecture from our distinguished international faculty members. For MIAR 2004, we received 93 full submissions, which were subsequently reviewed by up to 5 reviewers, resulting in the acceptance of the 41 full papers included in this volume.
