Advances in Music Information Retrieval Zbigniew W. Ras, Alicja Wieczorkowska, 2010-03-10 Sound waves propagate through various media, and allow communication or entertainment for us, humans. Music we hear or create can be perceived in such aspects as rhythm, melody, harmony, timbre, or mood. All these elements of music can be of interest for users of music information retrieval systems. Since vast music repositories are available for everyone in everyday use (both in private collections, and in the Internet), it is desirable and becomes necessary to browse music collections by contents. Therefore, music information retrieval can be potentially of interest for every user of computers and the Internet. There is a lot of research performed in music information retrieval domain, and the outcomes, as well as trends in this research, are certainly worth popularizing. This idea motivated us to prepare the book on Advances in Music Information Retrieval. It is divided into four sections: MIR Methods and Platforms, Harmony, Music Similarity, and Content Based Identification and Retrieval. Glossary of basic terms is given at the end of the book, to familiarize readers with vocabulary referring to music information retrieval.

Proceedings of International Conference on Communication and Computational Technologies Sandeep Kumar, Sunil Dutt Purohit, Saroj Hiranwal, Mukesh Prasad, 2021-08-23 This book gathers selected papers presented at 3rd International Conference on Communication and Computational Technologies (ICCCT 2021), jointly organized in virtual format by Rajasthan Institute of Engineering and Technology, Jaipur and Rajasthan Technical University Kota in association with Soft Computing Research Society, during 27–28 February 2021. The volume is a collection of state-of-the-art research work in the cutting-edge technologies related to communication and intelligent systems. The topics covered are algorithms and applications of intelligent systems, informatics and applications, and communication and control systems.

This is the Sound of Irony: Music, Politics and Popular Culture Katherine L. Turner, 2016-03-03 The use of irony in music is just beginning to be defined and critiqued, although it has been used, implied and decried by composers, performers, listeners and critics for centuries. Irony in popular music is especially worthy of study because it is pervasive, even fundamental to the music, the business of making music and the politics of messaging. Contributors to this collection address a variety of musical ironies found in the 'notes themselves,' in the text or subtext, and through performance, reception and criticism. The chapters explore the linkages between irony and the comic, the tragic, the remembered, the forgotten, the co-opted, and the resistant. From the nineteenth to twenty-first centuries, through America, Europe and Asia, this provocative range of ironies course through issues of race, religion, class, the political left and right, country, punk, hip hop, folk, rock, easy listening, opera and the technologies that make possible our pop music experience. This interdisciplinary volume creates new methodologies and applies existing theories of irony to musical works that have made a cultural or political impact through the use of this most multifaceted of devices.

Theory Into Poetry Eva Müller-Zettelmann, Margarete Rubik, 2005 At the beginning of the 21st century, there is still no generally accepted comprehensive definition of the lyric or differentiated modern toolkit for its analysis. The reception of poetry is largely characterised either by an empathetic identification of critics with the lyric persona or by exclusive interest in formal patterning. The present volume seeks to remedy this deficit. All the contributors 'theorise' the lyric to overcome the impasse of an impressionistic and narrowly formalistic critical debate on the genre. Their papers focus on a variety of different questions: the problem of establishing a framework for definition and classification; the search for dynamic and potent critical approaches; investigations of poetry's cultural performance and its fundamental relevance for the construction of group cohesion. The essays collected in this volume offer a consciously polyphonic range of theories and interpretations, suggesting to the reader a variety of theoretical frameworks and practical illustrations of how a discussion of poetry may be firmly grounded in modern literary theory.

PRICAI 2018: Trends in Artificial Intelligence Xin Geng, Byeong-Ho Kang, 2018-07-30 This two-volume set, LNAI 11012 and 11013, constitutes the thoroughly refereed proceedings of the 15th Pacific Rim Conference on Artificial Intelligence, PRICAI 2018, held in Nanjing, China, in August 2018. The 82 full papers and 58 short papers presented in these volumes were carefully reviewed and selected from 382 submissions. PRICAI covers a wide range of topics such as AI theories, technologies and their applications in the areas of social and economic importance for countries in the Pacific Rim.

Music Data Analysis Claus Weihs, Dietmar Jannach, Igor Vatolkin, Guenter Rudolph, 2016-11-17 This book provides a comprehensive overview of music data analysis, from introductory material to advanced concepts. It covers various applications including transcription and segmentation as well as chord and harmony, instrument and tempo recognition. It also discusses the implementation aspects of music data analysis such as architecture, user interface and hardware. It is ideal for use in university classes with an interest in music data analysis. It also could be used in computer science and statistics as well as musicology.

Pimenidis,2020-05-29 This 2 volume-set of IFIP AICT 583 and 584 constitutes the refereed proceedings of the 16th IFIP WG 12.5 International Conference on Artificial Intelligence Applications and Innovations, AIAI 2020, held in Neos Marmaras, Greece, in June 2020.* The 70 full papers and 5 short papers presented were carefully reviewed and selected from 149 submissions. They cover a broad range of topics related to technical, legal, and ethical aspects of artificial intelligence systems and their applications and are organized in the following sections: Part I: classification; clustering - unsupervised learning -analytics; image processing; learning algorithms; neural network modeling; object tracking - object detection systems; ontologies - AI; and sentiment analysis - recommender systems. Part II: AI ethics - law; AI constraints; deep learning - LSTM; fuzzy algebra - fuzzy systems; machine learning; medical - health systems; and natural language. *The conference was held virtually due to the COVID-19 pandemic.

Show Tunes Steven Suskin,2010-03-09 *Show Tunes* fully chronicles the shows, songs, and careers of the major composers of the American musical theatre, from Jerome Kern's earliest interpolations to the latest hits on Broadway. Legendary composers like Gershwin, Rodgers, Porter, Berlin, Bernstein, and Sondheim have been joined by more recent songwriters like Stephen Schwartz, Stephen Flaherty, Michael John LaChiusa, and Adam Guettel. This majestic reference book covers their work, their innovations, their successes, and their failures. *Show Tunes* is simply the most comprehensive volume of its kind ever produced, and this newly revised and updated edition discusses almost 1,000 shows and 9,000 show tunes. The book has been called a concise skeleton key to the Broadway musical (*Variety*) and a ground-breaking reference work with a difference (*Show Music*)-or, as the *Washington Post* observed, It makes you sing and dance all over your memory. The eagerly anticipated Fourth Edition, updated through May, 2009, features the entire theatrical output of forty of Broadway's leading composers, in addition to a wide selection of work by other songwriters. The listings include essential production data and statistics, the most extensive information available on published and recorded songs, and lively commentary on the shows, songs, and diverse careers. Based on meticulous research, the book also uncovers dozens of lost musicals-including shows that either closed out of town or were never headed for Broadway-and catalogs hundreds of previously unknown songs, including a number of musical gems that have been misplaced, cut, or forgotten. Informative, insightful, and provocative, *Show Tunes* is an essential guide for anyone interested in the American musical.

Big Data and Cloud Computing Neelanarayanan Venkataraman,Lipo Wang,Xavier Fernando,Ahmed F. Zobaa,2023-06-10 The book presents papers from the 7th International Conference on Big Data and Cloud Computing Challenges (ICBCC 2022). The book includes high-quality, original research on various aspects of big data and cloud computing, offering perspectives from the industrial and research communities on addressing the current challenges in the field. This book discusses key issues and highlights recent advances in a single broad topic applicable to different sub-fields by exploring various multidisciplinary technologies. This book supports the transfer of vital knowledge to next-generation researchers, students, and practitioners in academia and industry.

Music Data Mining Tao Li,Mitsunori Ogiwara,George Tzanetakis,2011-07-12 The research area of music information retrieval has gradually evolved to address the challenges of effectively accessing and interacting large collections of music and associated data, such as styles, artists, lyrics, and reviews. Bringing together an interdisciplinary array of top researchers, *Music Data Mining* presents a variety of approaches to

Computational Creativity Research: Towards Creative Machines Tarek R. Besold,Marco Schorlemmer,Alan Smalls,2014-12-04 Computational Creativity, Concept Invention, and General Intelligence in their own right all are flourishing research disciplines producing surprising and captivating results that continuously influence and change our view on where the limits of intelligent machines lie, each day pushing the boundaries a bit further. By 2014, all three fields also have left their marks on everyday life – machine-composed music has been performed in concert halls, automated theorem provers are accepted tools in enterprises' R&D departments, and cognitive architectures are being integrated in pilot assistance systems for next generation airplanes. Still, although the corresponding aims and goals are clearly similar (as are the common methods and approaches), the developments in each of these areas have happened mostly individually within the respective community and without closer relationships to the goings-on in the other two disciplines. In order to overcome this gap and to provide a common platform for interaction and exchange between the different directions, the International Workshops on "Computational Creativity, Concept Invention, and General Intelligence" (C3GI) have been started. At ECAI-2012 and IJCAI-2013, the first and second edition of C3GI each gathered researchers from all three fields, presenting recent developments and results from their research and in dialogue and joint debates bridging the disciplinary boundaries. The chapters contained in this book are based on expanded versions of accepted contributions to the workshops and additional selected contributions by renowned researchers in the relevant fields. Individually, they give an account of the state-of-the-art in their respective area, discussing both, theoretical approaches as well as implemented systems. When taken together and looked at from an integrative perspective, the book in its totality offers a starting point for a (re)integration of Computational Creativity, Concept Invention, and General Intelligence, making visible common lines of work and theoretical underpinnings, and pointing at chances and opportunities arising from the interplay of the three fields.
