Carabid Beetles: Ecology and Evolution K. Desender, M. Dufrêne, M. Loreau, M. L. Luff, J.-P. Maelfait, 2013-04-17 The Carabidae form one of the largest and best studied families of insects, occurring in nearly every terrestrial habitat. The contributions included in this book cover a broad spectrum of recent research into this beetle family, with an emphasis on various aspects of ecology and evolution. They deal both with individual carabid species, for example in studies on population and reproductive biology or life history in general, and with ground beetle communities, as exemplified in papers treating assemblages in natural habitats, on agricultural land and in forests. Disciplines range from biogeography and faunistics, over morphology, taxonomy and phylogenetics, ecophysiology and functional ecology, to population, community, conservation and landscape ecology. This volume is the result of the 8th European Carabidologists' Meeting, 2nd International Symposium of Carabidology, September 1-4, 1992, Belgium.

The Ecology of Transportation: Managing Mobility for the Environment John Davenport, Julia L. Davenport, 2006-06-30 This volume reviews the ecological effects of road, rail, marine and air transport. The focus ranges from identification of threats and repair of damaging effects to design of future transport systems that minimize environmental degradation. The scope of coverage extends from small ecosystems to the planet as a whole. Experts from

a variety of disciplines address the topic, expressing views across the spectrum from deep pessimism to cautious optimism.

L'Eco-quartier de Saint-Laurent migre vers le logiciel Sage 50 Miguel Dumay,2017-04-05 Rapport de Stage de l'année 2013 dans le domaine Gestion d'entreprise - Comptabilité, Fiscalité, , langue: Français, résumé: J'ai réalisé mon stage à l'Éco-quartier de Saint-Laurent qui est un organisme sans but lucratif. Saint-Laurent est l'un des plus grands arrondissements situé au nord de l'île de Montréal avec une population multiethnique estimée en 2008 à 86 835 habitants. En raison de sa situation environnementale, avec plusieurs autoroutes, grandes usines et un aéroport international, un Éco-quartier a bel et bien sa raison d'être dans un tel territoire. Pour mener sa mission écologique, l'Éco-quartier utilise des fonds qui nécessitent un système comptable plus efficace pour une meilleure gestion. Voilà pourquoi l'Organisme envisage de migrer vers Sage 50 (Simple Comptable), un logiciel de comptabilité et de gestion d'entreprise convivial qui offre aux institutions et entreprises les outils dont elles ont besoin pour gérer leurs transactions financières et rationaliser leurs opérations.

Governance of Near-Urban Conservation Areas Michael Lait,2021-03-22 This book comprehensively describes the history of Gatineau Park, from the first proposals for a "national park" in the early 1900s to the governance issues in the present period, and it highlights the issues concerning the planning

and governance of this unique near-urban ecological area. The 34,500-hectare Gatineau Park is an ecologically diverse wilderness area near the cities of Ottawa (Canada's national capital) and Gatineau. Gatineau Park is planned and managed as the "Capital's Conservation Park" by the federal government, specifically the National Capital Commission (NCC). This monograph examines numerous governmental and non-governmental actors that are engaged in the governance of a near-urban wilderness area. Unlike Canada's national parks, Gatineau Park's administration involves all three levels of government (federal, provincial, and four municipalities). This book is the first to document the relations among the public and private entities, and is one of only a handful of studies concerning the governance of Canada's National Capital Region (NCR), which is relatively unique in the literature on federal capitals. Of particular interest to students of governance will be the examination of federal-provincial relations, as the Governments of Canada and Quebec have had a notoriously strained relationship. As the first governance study of Gatineau Park, the monograph will provide readers with insight into the significance of non-state actors, showing the range of competencies that public and private groups deploy in their negotiations with NCC planners, policymakers, park managers, local and federal politicians.

France, Charles R. Goldman, Kevin Heanue, Julia Jones, Frederick Swanson, Thomas Turrentine, Thomas C. Winter, 2003 A central goal of transportation is the delivery of safe and efficient services with minimal environmental impact. In practice, though, human mobility has flourished while nature has suffered. Awareness of the environmental impacts of roads is increasing, yet information remains scarce for those interested in studying, understanding, or minimizing the ecological effects of roads and vehicles. Road Ecology addresses that shortcoming by elevating previously localized and fragmented knowledge into a broad and inclusive framework for understanding and developing solutions. The book brings together fourteen leading ecologists and transportation experts to articulate state-of-the-science road ecology principles, and presents specific examples that demonstrate the application of those principles. Diverse theories, concepts, and models in the new field of road ecology are integrated to establish a coherent framework for transportation policy, planning, and projects. Topics examined include: foundations of road ecology roads, vehicles, and transportation planning vegetation and roadsides wildlife populations and mitigation water, sediment, and chemical flows aquatic ecosystems wind, noise, and atmospheric effects road networks and landscape fragmentation Road Ecology links ecological theories and concepts with transportation planning, engineering, and travel behavior. With more than 100 illustrations and examples from around the world, it is an indispensable and pioneering work for anyone involved with

transportation, including practitioners and planners in state and province transportation departments, federal agencies, and nongovernmental organizations. The book also opens up an important new research frontier for ecologists.

The Reverse Mortgage Michel Tanguay, Sophie Roussin, 2007 The first oil crisis hit 35 years ago, and during the years that followed, the U.S. automotive industry discovered Japanese and European products. Smaller, less powerful and less prestigious, but more efficient, these cars began to capture the North American market. Since then, other oil crises have raised concerns among consumers while the Japanese, German and Korean automotive industries won the battle of quality and diversity. Important gains in vehicle fuel efficiency have resulted in the proliferation of heavier and more powerful automobiles instead of more eco-efficient ones.
