Music for the Revolution Amy Nelson, 2010-02-24 Mention twentieth-century Russian music, and the names of three &giants&—Igor Stravinsky, Sergei Prokofiev, and Dmitrii Shostakovich—immediately come to mind. Yet during the turbulent decade following the Bolshevik Revolution, Stravinsky and Prokofiev lived abroad and Shostakovich was just finishing his conservatory training. While the fame of these great musicians is widely recognized, little is known about the creative challenges and political struggles that engrossed musicians in Soviet Russia during the crucial years after 1917. *Music for the Revolution* examines musicians&’ responses to Soviet power and reveals the conditions under which a distinctively Soviet musical culture emerged in the early thirties. Given the dramatic repression of intellectual freedom and creativity in Stalinist Russia, the twenties often seem to be merely a prelude to Totalitarianism in artistic life. Yet this was the decade in which the creative intelligentsia defined its relationship with the Soviet regime and the aesthetic foundations for socialist realism were laid down. In their efforts to deal with the political challenges of the Revolution, musicians grappled with an array of issues affecting musical education, professional identity, and the administration of musical life, as well as the embrace of certain creative platforms and the rejection of others. Nelson shows how debates about these issues unfolded in the context of broader concerns about artistic modernism and elitism, as well as the more expansive goals and censorial authority of Soviet authorities. *Music for the Revolution* shows how the musical community helped shape the musical culture of Stalinism and extends the interpretive frameworks of Soviet culture presented in recent scholarship to an area of artistic creativity often overlooked by historians. It should be broadly important to those interested in Soviet history, the cultural roots of Stalinism, Russian and Soviet music, and the place of music and the arts in revolutionary change.

The Bolsheviks and the Chinese Revolution 1919-1927 Alexander Pantsov, 2013-10-23 Based mainly on unknown Russian archival sources which have previously been unobtainable, this book analyses the Bolshevik concepts of the Chinese revolution and their reception in China. Issues include the role of the three Bolshevik leaders, Lenin, Stalin, and Trotsky in trying to lead the Chinese Communists to victory, the real nature of the Trotsky-Stalin split in the Comintern, and a dramatic history of the Chinese Oppositionist movement in Soviet Russia.

Revolution and War in Spain, 1931-1939 Paul Preston, 2012-10-12 This collection of essays constitutes a magnificent monument to recent scholarship on the Second Republic and the Civil War. It is indispensable for a full understanding of the period.' - Raymond Carr

Rumen Microbiology: From Evolution to Revolution Anil Kumar Puniya, Rameshwar Singh, Devki Nandan Kamra, 2015-07-11 This book offers an in-depth description of different groups of microbes (i.e. bacteria, protozoa, fungi and viruses) that exist in the rumen microbial community, and offers an overview of rumen microbiology, the rumen microbial ecosystem of domesticated ruminants, and rumen microbial diversity. It provides the latest concepts on rumen microbiology for scholars, researchers and teachers of animal and veterinary sciences. With this goal in mind, throughout the text we focus on specific areas related to the biology and complex interactions of the

microbes in rumen, integrating significant key issues in each respective area. We also discuss rumen manipulation with plant secondary metabolites, microbial feed additives, utilization of organic acids, selective inhibition of harmful rumen microbes, and 'omics' approaches to manipulating rumen microbial functions. A section on the exploration and exploitation of rumen microbes addresses topics including the current state of knowledge on rumen metagenomics, rumen: an underutilized niche for industrially important enzymes and ruminal fermentations to produce fuels. We next turn our attention to commercial applications of rumen microbial enzymes and to the molecular characterization of euryarchaeal communities within an anaerobic digester. A section on intestinal disorders and rumen microbes covers acidosis in cattle, urea/ ammonia metabolism in the rumen and nitrate/ nitrite toxicity in ruminant diets. Last, the future prospects of rumen microbiology are examined, based on the latest developments in this area. In summary, the book offers a highly systematic collection of essential content on rumen microbiology.

Autonomous Vehicles Plus Chander Dhawan,2019-02-19 Autonomous Vehicles Plus: A Critical Analysis of Challenges Delaying AV Nirvana is a valuable compendium of information for autonomous vehicle (AV) industry professionals. The book offers a critical analysis of this emerging technology and business models through a holistic and multi-faceted discussion by a consultant who has done extensive research of underlying technologies. Among other things, Autonomous Vehicles Plus provides an independent and comprehensive viewpoint of the history and basic technology concepts of AVs, along with an explanation of their artificial intelligence underpinning, architectural framework, and key components. Here is all the minutiae on driverless cars, including the challenges facing the industry, predictions for their future, advice for entrepreneurs looking to capitalize on their emerging importance, and the roiling confusion that attends it all. Autonomous vehicle industry professionals and those seeking a broad understanding of the emerging technology will find much to distract and delight them in this serious book. Autonomous Vehicles Plus will be of special interest to technology and business development professionals who want to understand the fundamentals that determine technology adoption.

The Accelerating Transport Innovation Revolution George Giannopoulos,John F. Munro,2019-04-17 The Accelerating Transport Innovation Revolution: A Global, Case Study-based Assessment of Current Experience, Cross-sectorial Effects and Socioeconomic Transformations, offers a comprehensive view of current state-of-the-art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results. It offers a fascinating new model of the innovation process

based on theories of biological ecosystems, general systems theory and basins of attraction (represented through space-time graphs well known in mathematics). Furthermore, it considers – through a number of dedicated chapters - key issues and elements of innovation ecosystems, such as: Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems (Chapter 4); Review of innovation organization and governance in key countries and regions (Chapter 5); the role of technological Spillovers (Chapter 6); Collection and use of data for innovation monitoring and benchmarking (Chapter 7); Intellectual Property protection between competing ecosystems (Chapter 8); Economics of innovation (Chapter 9); Public and private sector involvement in Transport innovation creation (Chapter 10); the role of the individual entrepreneur - innovator in energizing change (Chapter 11). Finally, in Chapter 12, there is a thorough summary of key findings. This book uses a paradigmatic approach to augment the innovation ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model. It therefore includes ten case studies from the U.S., Europe and Asia, detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned. It does this, effectively, at five different levels of analysis i.e. the individual innovator / entrepreneur level, the organization level (government agency or company), the regional ecosystem level, the nation-state level and the global – systemic or international level. Each level of analysis, reveals unique features of the innovation landscape and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation especially on a revolutionary scale. The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years (especially in the public sector), there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large-scale, revolutionary change as the future unfolds. Thus, a primary theme of the book is that understanding how research results translate into market innovation and implementation, especially understanding the nature of revolutionary innovation, is as important as the creation of innovations themselves. While the focus of the book is on Transportation, the concepts and recommendations presented apply to other fields too. Formulates and presents a workable and comprehensive new model of innovation Defines and analyzes many concepts and notions related to innovation, research and market implementation Examines the critical factors affecting innovation production and successful commercial implementation of research results Examines organizational models of coordination, governance, data collection, process analysis and use of intellectual property tools Includes recent, well-researched and documented case studies of successful innovation ecosystems across the world mainly – but not only – in the Transport field

The German Revolution and Political Theory Gaard Kets,James Muldoon,2019-05-02 This book is the first collection within political theory to examine the ideas and debates of the German Revolution of 1918/19. It discusses the political theorists and actors of the revolution and uncovers

an incredibly fertile body of political thought. Revolutionary events led to the proliferation of new political strategies, theoretical insights and institutional proposals. Key questions included the debate between a national assembly and a council system, the socialisation of the economy, the development of new forms of political representation and the proper role of parliaments, political parties and trade unions. This book offers novel perspectives on the history of the revolution, a thorough engagement with its main thinkers and an analysis of its relevance for contemporary political thought.

Thinking Revolution Through Film Hanno Berger,2022-09-19 This book aims to redefine the relationship between film and revolution. Starting with Hannah Arendt's thoughts on the American and French Revolution, it argues that, from a theoretical perspective, revolutions can be understood as describing a relationship between time and movement and that ultimately the spectators and not the actors in a revolution decide its outcome. Focusing on the concepts of 'time,' 'movement,' and 'spectators,' this study develops an understanding of film not as a medium of agitation but as a way of thinking that relates to the idea of historicity that opened up with the American and French Revolution, a way of thinking that can expand our very notion of revolution. The book explores this expansion through an analysis of three audiovisual stagings of revolution: Abel Gance's epic on the French Revolution Napoléon, Warren Beatty's essay on the Russian Revolution Reds, and the miniseries John Adams about the American Revolution. The author thereby offers a fresh take on the questions of revolution and historicity from the perspective of film studies.
