**Mobile Security Products for Android** Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices<sup>1</sup>. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.

It Security Products for Corporate Users Peter Stelzhammer, Andreas Clementi, Thomas Arlt, Philippe Rödlach, 2010 Most organizations are aware of the risks threatening their IT environment. Viruses, trojans, worms, exploits and many other threats represent a serious danger for the IT department. A collapse of the IT system could mean grave financial losses right up to insolvency for a company. The IT departments of companies are conscious of this problem. Getting the best protection against these threats is the only issue. A simple file antivirus solution alone is totally inadequate, as there are too many threats from contaminated e-mails, exploits etc. What is required is a comprehensive suite that provides protection against all of these. Functional Diversity Because of the immense functional diversity of various antivirus suites and corporate products, it is becoming increasingly difficult for decision-makers in the IT sector to get a proper overview. Which product should one opt for and for which areas of protection? During these tests our main focus has not been on malware detection rates, but on the products' handling and user-friendliness, and the scope of functionality. We have compiled the functional scope of various products in a detailed table. For malware detection rates of individual products please refer to the tests of our website: <http://>

*Padres alerta seguridad de los menores en internet.*, 2015-01-29 Hay aspectos del comportamiento humano que, generación tras generación, se manifiestan invariablemente en las personas. Sin duda, uno de estos aspectos es el cuidado y la protección hacia los hijos. Sin embargo, hay otros factores que, de manera circunstancial, van surgiendo implicando, de forma paulatina, la modificación de hábitos y estilos de comportamiento, a los que es necesario adecuarse, tras haberlos estudiado y comprendido adecuadamente. Actualmente, vivimos en una época caracterizada por una profunda transformación tecnológica. Las Nuevas Tecnologías de la Información y la Comunicación (NTIC) avanzan a un ritmo vertiginoso que, en muchas ocasiones, no resulta sencillo seguir. No obstante, la complejidad de este entorno de cambios y avances continuos no nos exime, en calidad de padres y educadores, de su estudio y conocimiento, algo que es obligado si queremos ser responsables del presente y, en cierta medida, del futuro de nuestros menores. En este libro, el autor sintetiza las pautas necesarias para que el adulto pueda conocer el panorama tecnológico actual y, desde un punto de vista privilegiado, capacitarse para orientar al menor. Por supuesto, se contemplan no solo las bondades de la tecnología, sino también la influencia directa y negativa que ésta puede ejercer sobre niños y jóvenes; en este sentido, el autor analiza y desgana fenómenos como el ciberbullying, grooming, sexting, etc. El texto, escrito en un lenguaje claro y acompañado de un glosario detallado de términos, se ha concebido bajo tres prismas profesionales, diferentes pero complementarios, como son el tecnológico, el legal y el psicológico. De este modo, el lector irá descubriendo que el uso de las NTIC por parte de los menores está sujeto a estos tres enfoques y, lo que es si cabe más importante, que la solución a los retos planteados exige necesariamente un punto de vista multidisciplinar. Recomendaciones, programas, direcciones web de utilidad? se ofrecen en este libro de un modo ordenado y complementario a los contenidos, lo que indudablemente ayuda en su comprensión. Así mismo, el libro aporta un portal de referencia ([www.padresalerta.es](http://www.padresalerta.es)) donde poder plantear dudas y formular sugerencias. Sin duda, se trata de una obra que todos los padres y educadores deberían conocer.
