**The Great Daylight Saving Time Controversy** Chris

Pearce,2017-04-06 Daylight saving time has been described as one of the most controversial issues in modern history. This encyclopedia of daylight saving time commemorates 100 years of the scheme since it was first introduced nationally in 1916 by European countries on both sides of World War I to save fuel. The book examines the origins of daylight saving, including the historical development of calendars, clocks, standard time, and the idea of changing the clock to give more daylight late in the day. It looks at the history of daylight saving in every country that has ever used the measure. It also analyses daylight saving in each state of the US, Australia and Brazil, and each Canadian province. It features many intriguing and often prolonged battles between advocates and critics of daylight saving in countries around the world, as well as lighter moments. It highlights the determination of daylight saving time champions such as the UK's William Willett,

the US's Robert Garland and Harley Staggers, New Zealand's Thomas Sidey and Tasmania's John Steer. It delves into the chaotic daylight saving situations that emerged, notably in the US and Canada, but also elsewhere. Every country and sometimes each state has a different and usually controversial story to tell.

**Short-Term Load Forecasting 2019** Antonio Gabaldón, María Carmen Ruiz-Abellón, Luis Alfredo Fernández-Jiménez, 2021-02-26

Short-term load forecasting (STLF) plays a key role in the formulation of economic, reliable, and secure operating strategies (planning, scheduling, maintenance, and control processes, among others) for a power system and will be significant in the future. However, there is still much to do in these research areas. The deployment of enabling technologies (e.g., smart meters) has made high-granularity data available for many customer segments and to approach many issues, for instance, to make forecasting tasks feasible at several demand aggregation levels. The first challenge is the improvement of STLF models and their performance at new aggregation levels. Moreover, the mix of renewables in the power system, and the necessity to include more flexibility through demand response initiatives have introduced greater uncertainties, which means new challenges for STLF in a more dynamic power

system in the 2030–50 horizon. Many techniques have been proposed and applied for STLF, including traditional statistical models and AI techniques. Besides, distribution planning needs, as well as grid modernization, have initiated the development of hierarchical load forecasting. Analogously, the need to face new sources of uncertainty in the power system is giving more importance to probabilistic load forecasting. This Special Issue deals with both fundamental research and practical application research on STLF methodologies to face the challenges of a more distributed and customer-centered power system.

Real-time Linked Dataspaces Edward Curry, 2019-11-18 This open access book explores the dataspace paradigm as a best-effort approach to data management within data ecosystems. It establishes the theoretical foundations and principles of real-time linked dataspaces as a data platform for intelligent systems. The book introduces a set of specialized best-effort techniques and models to enable loose administrative proximity and semantic integration for managing and processing events and streams. The book is divided into five major parts: Part I “Fundamentals and Concepts” details the motivation behind and core concepts of real-time linked dataspaces, and establishes the need to evolve data

management techniques in order to meet the challenges of enabling data ecosystems for intelligent systems within smart environments. Further, it explains the fundamental concepts of dataspace and the need for specialization in the processing of dynamic real-time data. Part II “Data Support Services” explores the design and evaluation of critical services, including catalog, entity management, query and search, data service discovery, and human-in-the-loop. In turn, Part III “Stream and Event Processing Services” addresses the design and evaluation of the specialized techniques created for real-time support services including complex event processing, event service composition, stream dissemination, stream matching, and approximate semantic matching. Part IV “Intelligent Systems and Applications” explores the use of real-time linked dataspace within real-world smart environments. In closing, Part V “Future Directions” outlines future research challenges for dataspace, data ecosystems, and intelligent systems. Readers will gain a detailed understanding of how the dataspace paradigm is now being used to enable data ecosystems for intelligent systems within smart environments. The book covers the fundamental theory, the creation of new techniques needed for support services, and lessons learned from real-world intelligent systems and

applications focused on sustainability. Accordingly, it will benefit not only researchers and graduate students in the fields of data management, big data, and IoT, but also professionals who need to create advanced data management platforms for intelligent systems, smart environments, and data ecosystems.

### The North American Journals of Prince Maximilian of Wied

Prince Alexander Philipp Maximilian of Wied, 2014-04-09 Few historical chronicles are as informative and eloquent as the journal written by Prince Maximilian of Wied as a record of his journey into the North American interior in 1833, following the route Lewis and Clark had taken almost thirty years earlier. Maximilian's memorable descriptions of topography, Native peoples, and natural history were further brought to life through the now-familiar watercolors and sketches of Karl Bodmer, the young Swiss artist who accompanied him. The first of the three volumes of the North American Journals recounts the prince's journey from Europe to St. Louis—then the edge of the frontier. Volume II vividly narrates his experiences on the upper Missouri and offers an unparalleled view of the region and the peoples native to it. In these pages, we accompany Maximilian as he travels far up the Missouri River to Fort McKenzie, a trading post some 2,500 river miles from St.

Louis near what is now Fort Benton, Montana. The handsome, oversize volume not only reproduces this historic document but also features every one of Maximilian's illustrations—more than 200 in all, including nearly 50 in color—from the original journal now housed at Joslyn Art Museum in Omaha, Nebraska. Maximilian recorded detailed observations of flora, fauna, geology, and climate. From his unique, scientifically trained perspective, he also undertook a serious field study of the cultures and languages of the central and northern Great Plains Indians he encountered. His journal contains important, firsthand descriptions of tribal social customs, religious rituals, material culture, and art, as well as an account of Native interactions with Euro-Americans engaged in the then-burgeoning fur trade. This book is published with the assistance of the National Historical Publications and Records Commission.
