3 books to know Voyages extraordinaires Jules Verne, August Nemo, 2020-05-02 Welcome to the 3 Books To Know series, our idea is to help readers learn about fascinating topics through three essential and relevant books. These carefully selected works can be fiction, non-fiction, historical documents or even biographies. We will always select for you three great works to instigate your mind, this time the topic is: Voyages Extraordinaires: Twenty Thousand Leagues under the Sea Around the World in 80 Days From the Earth to the Moon All by Jules Verne The Voyages Extraordinaires is a sequence of fifty-four novels by Jules Verne. The goal of the Voyages was to outline the geographical, geological, physical, and astronomical knowledge amassed by science and to recount, in an entertaining format. Verne's attention to detail coupled with his sense of wonder form the backbone of the Voyages. In Twenty Thousand Leagues under the Sea we travel in the submarine Nautilus. The crew cut off any relationship with the nations and with humanity. They live only on what the sea gives them - food, the raw material they need for the production of electricity. Around the World in Eighty Days tells the journey of an aristocrat and his employee who, motivated by a bet, try to go around the world with limited time and resources. It was the most popular of Verne's Voyages extraordinaires series of novels. From the Earth to the Moon tells the story of attempts to catapult a manned projectile onto the Moon. It is curious that some of Verne's calculations, in spite of the lack of empirical data, are quite accurate. This is one of many books in the series 3 Books To Know. If you liked this book, look for the other titles in the series, we are sure you will like some of the topics.

LEO, Inventor Extraordinaire Luke Xavier Cunningham, 2021-04-06 In order to unlock his family's past and how he became an orphan, Leo will need every skill and invention he has—even if his inventions don't always work. This middle-school adventure mystery is perfect for puzzle solvers, as Leo discovers a series of tunnels below his school filled with clues, riddles and puzzles to solve about his identity and his family. A "lifer" at the secluded Academy of Florence, Leo has never met his parents ... or anyone in his family for that matter. His current "family" is his mechanical monkey and robot lion, who along with his charming best friend and fellow lifer, Savvy, only get him into trouble. But after Leo's latest experiment goes catastrophically wrong, he finds a mysterious clue that opens an underground maze—one that seems to have been created for him to solve. Leo hopes the tunnels will help him discover the identities of his parents and the reason he's an orphan in the first place. Instead, he finds that his past and possibly even his future is somehow linked to the innovative Wynn Toys company, whose genius president mysteriously disappeared years before. Leo must use his creativity and scientific know-how to revive the toy company, oust its dastardly leader, and discover the fate of his real family. *LEO, Inventor Extraordinaire*: Is perfect for kids 8 to 12 who enjoy action, adventure, humor, and mystery Is like *The DaVinci Code* for kids, with robots, wacky inventions, and puzzles to solve Contains almost 60 pieces of original black and white artwork Encourages imagination and the development of STEAM skills *LEO, Inventor Extraordinaire* is a Northern Lights Book Awards Winner in the Middle Grade Fiction category for 2021 -- The Northern Lights Book Awards

Chispita Service Dog Extraordinaire Richard B. Taylor, 2010 Volume 4. Alaskan Land Cruise, 62 pages, 57 pictures. The Chispita books are written on the premise that an adult reader can use the experiences of Pita to teach/enhance the life experiences of a growing child as well as the fun of games, puzzles and adventures that the world has to offer. In volume three Alaskan Cruise Chispita ventured to Alaska with her Pita Kid's by cruise ship, but as she said The adventure does not end there. Volume four takes little Pita and her companions from Seward Alaska to Fairbanks by bus, train, airplane, jeep, raft, paddle wheeler and foot, with a stop at Denali park where they marvel at this land of the mid-night sun with it's many and varied story's. From Seward we travel by bus to Anchorage, along the way Pita visits the old folk's animal home to make new friends, at Anchorage we board our domed rail cars and venture north to Denali National Park and Preserve, where we stay for several days as we tour the preserve by bus, jeep, airplane and river raft to interact and photograph the wild life, and we do mean WILD as our bus is bumped by a mad Caribou and little Chispita learns from Chuck the Marmot and Lobo the Wolf how to play a good joke. At the preserve it's hard to say what is the most fun, but the flight by mule plane and sight seeing Mt. McKinley from our twin aircraft as well as the three day photo/camping tour with a professional photo guide, were but a few of the highlights. The adventure moves on to Fairbanks Alaska ending with paddle wheelers, 100# cabbages, gold panning and yuking up at the Alaskan pipe line. All punctuated by graphic photos, enjoy.

Emmy Noether – Mathematician Extraordinaire David E. Rowe, 2021-01-09 Although she was famous as the mother of modern algebra, Emmy Noether's life and work have never been the subject of an

authoritative scientific biography. Emmy Noether – Mathematician Extraordinaire represents the most comprehensive study of this singularly important mathematician to date. Focusing on key turning points, it aims to provide an overall interpretation of Noether's intellectual development while offering a new assessment of her role in transforming the mathematics of the twentieth century. Hermann Weyl, her colleague before both fled to the United States in 1933, fully recognized that Noether's dynamic school was the very heart and soul of the famous Göttingen community. Beyond her immediate circle of students, Emmy Noether's lectures and seminars drew talented mathematicians from all over the world. Four of the most important were B.L. van der Waerden, Pavel Alexandrov, Helmut Hasse, and Olga Taussky. Noether's classic papers on ideal theory inspired van der Waerden to recast his research in algebraic geometry. Her lectures on group theory motivated Alexandrov to develop links between point set topology and combinatorial methods. Noether's vision for a new approach to algebraic number theory gave Hasse the impetus to pursue a line of research that led to the Brauer–Hasse–Noether Theorem, whereas her abstract style clashed with Taussky's approach to classical class field theory during a difficult time when both were trying to find their footing in a foreign country. Although similar to *Proving It Her Way: Emmy Noether, a Life in Mathematics*, this lengthier study addresses mathematically minded readers. Thus, it presents a detailed analysis of Emmy Noether's work with Hilbert and Klein on mathematical problems connected with Einstein's theory of relativity. These efforts culminated with her famous paper *Invariant Variational Problems*, published one year before she joined the Göttingen faculty in 1919.
